APPROXIMATE DATE OF PROPOSED SALE TO THE PUBLIC:
From time to time after this Registration Statement becomes effective.

If any securities being registered on this Form are to be offered on a delayed or continuous basis pursuant to Rule 415 under the Securities Act of 1933, other than securities offered only in connection with dividend or interest reinvestment plans, check the following box:

Edgar Filing: EMAGIN CORP - Form S-1/A

If this Form is filed to register additional securities for an offering pursuant to Rule 462(b) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(c) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If this Form is a post-effective amendment filed pursuant to Rule 462(d) under the Securities Act, check the following box and list the Securities Act registration statement number of the earlier effective registration statement for the same offering.

If delivery of the prospectus is expected to be made pursuant to Rule 434, please check the following box.

The registrant hereby amends this registration statement on such date or dates as may be necessary to delay its effective date until the registrant shall file a further amendment which specifically states that this registration statement shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the registration statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

CALCULATION OF REGISTRATION FEE

Title of each class of securities to be registered	Amount to be registered	Proposed maximum offering price per share	Proposed maximum aggregate offering price (1)	Amount of registration fee (2)
Common Stock, \$0.001 par value per share	2,438,096	\$ 0.56	\$ 1,365,334	\$ 53.66

- (1) Estimated solely for purposes of calculating the registration fee in accordance with Rule 457(c) and Rule 457(g) under the Securities Act of 1933, using the average of the sale prices as reported on the OTCBB on January 5, 2009 which was \$0.56 per share.
- (2) The registrant previously paid a filing fee in the amount of \$113.00.

The registrant hereby amends this registration statement on such date or dates as may be necessary to delay its effective date until the registrant shall file a further amendment which specifically states that this registration shall thereafter become effective in accordance with Section 8(a) of the Securities Act of 1933 or until the registration statement shall become effective on such date as the Securities and Exchange Commission, acting pursuant to said Section 8(a), may determine.

PRELIMINARY PROSPECTUS SUBJECT TO COMPLETION, DATED February 2, 2009
eMagin Corporation

2,438,096 SHARES OF

COMMON STOCK

This prospectus relates to the resale by the selling stockholder of up to 2,438,096 shares of common stock, consisting of (i) 1,000,000 shares issuable upon the exercise of common stock purchase warrants, and (ii) 1,428,572 shares issued upon conversion of the Stillwater Note (as described herein) representing \$500,000 of the principal amount of the Stillwater Note, and (iii) 9,524 shares issued for accrued and unpaid interest under the Stillwater Note. As disclosed below, 50% of the outstanding principal and accrued and unpaid interest on the Stillwater Note was converted into shares of common stock on July 23, 2007 and the remaining 50% of the outstanding principal and accrued and unpaid interest on the Stillwater Note was converted into shares of common stock on December 22, 2008. The selling stockholders may sell common stock from time to time in the principal market on which the stock is traded at the prevailing market price or in negotiated transactions. We will pay the expenses of registering these shares.

Our common stock is listed on the Over-The-Counter Bulletin Board under the symbol "EMAN". The last reported sales price per share of our common stock as reported by the Over-The-Counter Bulletin Board on January 5, 2009 was \$0.60.

Investing in these securities involves significant risks. See "Risk Factors" beginning on page 10.

Neither the Securities and Exchange Commission nor any state securities commission has approved or disapproved of these securities or determined if this Prospectus is truthful or complete. Any representation to the contrary is a criminal offense. You should read this prospectus carefully before you invest.

The date of this prospectus is February __, 2009

The information in this Prospectus is not complete and may be changed. This Prospectus is included in the Registration Statement that was filed by eMagin Corporation with the Securities and Exchange Commission. The selling stockholders may not sell these securities until the registration statement becomes effective. This Prospectus is not an offer to sell these securities and is not soliciting an offer to buy these securities in any state where the sale is not permitted.

PROSPECTUS SUMMARY

The following summary highlights selected information contained in this prospectus. This summary does not contain all the information you should consider before investing in the securities. Before making an investment decision, you should read the entire prospectus carefully, including the “risk factors” section, the financial statements and the notes to the financial statements.

We design, develop, manufacture, and market virtual imaging products which utilize OLEDs, or organic light emitting diodes, OLED-on-silicon microdisplays and related information technology solutions. We integrate OLED technology with silicon chips to produce high-resolution microdisplays smaller than one-inch diagonally which, when viewed through a magnifier, create virtual images that appear comparable in size to that of a computer monitor or a large-screen television. Our products enable our original equipment manufacturer, or OEM, customers to develop and market improved or new electronic products. We believe that virtual imaging will become an important way for increasingly mobile people to have quick access to high resolution data, work, and experience new more immersive forms of communications and entertainment.

Our first commercial product, the SVGA+ (Super Video Graphics Array of 800x600 picture elements plus 52 added columns of data) OLED microdisplay was initially offered for sampling in 2001, and our first SVGA-3D (Super Video Graphics Array plus built-in stereovision capability) OLED microdisplay was shipped in early 2002. These products are being applied or considered for near-eye and headset applications in products such as entertainment and gaming headsets, handheld Internet and telecommunication appliances, viewfinders, and wearable computers to be manufactured by OEM customers for military, medical, industrial, and consumer applications. We market our products globally.

In 2006 we introduced our OLED-XL technology, which provides longer luminance half life and enhanced efficiency of eMagin's SVGA+ and SVGA-3D product lines. We are in the process of completing development of 2 additional OLED microdisplays, namely the SVGA 3DS (SVGA 3D shrink, a smaller format SVGA display with a new cell architecture with embedded features) and an SXGA (1280 x 1024 picture elements).

In January 2005 we announced the world's first personal display system to combine OLED technology with head-tracking and 3D stereovision, the Z800 3DVisor(tm), which was first shipped in mid-2005. This product was recognized as a Digital Living Class of 2005 Innovators, and received the Consumer Electronics Association's coveted Consumer Electronics Show (CES) 2006 Best of Innovation Awards for the entire display category as well as a Design and Innovations Award for the electronic gaming category. In February 2007 the Z800 3DVisor, as integrated in Chatten Associates' head-aimed remote viewer, was recognized as one of Advanced Imaging's Solutions of the Year.

We believe that our OLED-on-silicon microdisplays offer a number of advantages over current liquid crystal microdisplays, including greatly increased system level power efficiency, less weight and wider viewing angles. Using our active matrix OLED technology, many computer and video electronic system functions can be built directly into the OLED-on-silicon microdisplay, resulting in compact systems with expected lower overall system costs relative to alternative microdisplay technologies. We have developed our own technology to create high performance OLED-on-silicon microdisplays and related optical systems and we have licensed certain fundamental OLED and display technology from Eastman Kodak.

As the first to exploit OLED technology for microdisplays, and with the support of our partners and the development of our intellectual property, we believe that we enjoy a significant advantage in the commercialization of this display technology for virtual imaging. We believe we are the only company to sell full-color active matrix small molecule OLED-on-silicon microdisplays.

eMagin Corporation was created through the merger of Fashion Dynamics Corporation ("FDC"), which was organized on January 23, 1996 under the laws of the State of Nevada and FED Corporation ("FED"), a developer and manufacturer of optical systems and microdisplays for use in the electronics industry. FDC had no active business operations other than to acquire an interest in a business. On March 16, 2000, FDC acquired FED. The merged company changed its name to eMagin Corporation. Following the merger, the business conducted by eMagin is the business conducted by FED prior to the merger.

Our website is located at www.emagin.com and our e-commerce site is www.3dvisor.com. The contents of our website are not part of this Prospectus.

The Offering

Common stock offered by selling stockholders	Up to 2,438,096 shares, consisting of the following:
	· 1,438,096 shares of common stock, consisting of (i) 1,428,572 shares issued upon conversion of the Stillwater Note representing \$500,000 of the principal amount of the Stillwater Note and (ii) 9,524 shares issued for accrued and unpaid interest under the Stillwater Note.*
	· up to 1,000,000 shares of common stock issuable upon the exercise of common stock purchase warrants at an exercise price of \$0.48 per share.
Common Stock to be outstanding after the offering	16,736,459 shares**
Use of proceeds	We will not receive any proceeds from the sale of the common stock; however we will receive proceeds from the exercise of our warrants.
Over-The-Counter Bulletin Board Symbol	EMAN

* On July, 23 2007, Stillwater elected to convert \$252,166.50 of the Stillwater Note, then outstanding, representing \$250,000 of the principal amount of the Note due on July 23, 2007 and \$2,166.50 of accrued and unpaid interest into shares of common stock. Stillwater received 720,476 shares of the common stock at the conversion price of \$0.35. On December 22, 2008, Stillwater elected to convert the \$251,166.67 of the remaining Stillwater Note representing \$250,000 of the principal amount of the Note due on December 22, 2008 and \$1,166.67 of accrued and unpaid interest into shares of common stock. Stillwater received 717,620 shares of the common stock at the conversion price of \$0.35.

**The information above regarding the common stock to be outstanding after the offering is based on 15,736,459 shares of the Company's common stock outstanding as of January 5, 2009 and assumes the exercise of the warrants.

Recent Developments

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on December 23, 2008, pursuant to a Securities Purchase Agreement (the "Securities Purchase Agreement") entered into on December 18, 2008 between the Company and Stillwater on December 22, 2008 (the "Closing"), the Company sold Stillwater for an aggregate purchase price of \$4,033,000 an aggregate of 4,033 shares of its Series B Convertible Preferred Stock (the "Preferred Stock"), which have a stated value of \$1,000 per share, a conversion price of \$0.75 per share and have the rights and preferences set forth in the Certificate of Designations of Series B Convertible Preferred Stock filed with the Secretary of State for the State of Delaware on December 19, 2008 (the "Certificate of Designations"), and warrants to purchase 1,875,467 shares of common stock at \$1.03 per share (the "Warrants"). The Warrants terminate on December 22, 2013.

Pursuant to the terms of the Securities Purchase Agreement, the Company used the proceeds from the sale of the Preferred Stock exclusively to repay \$4,033,000 of its Amended and Restated 8% Senior Secured Convertible Notes (the "Notes") which matured on December 22, 2008.

Pursuant to the Securities Purchase Agreement, the members of the Company's board of directors, and certain executive officers executed lockup agreements pursuant to which, subject to the terms of the lockup agreement, they are restricted from selling the Company's stock that they beneficially own for 180 days from the Closing.

On December 22, 2008, the Company entered into an Exchange Agreement (the "Exchange Agreement") with three holders ("Holders") of its outstanding Notes. Pursuant to the Exchange Agreement, on December 22, 2008, the Holders exchanged \$1,700,000 of their outstanding Notes and accrued and unpaid interest thereon and received 1,706 shares of the Preferred Stock (the amount of the outstanding principal and accrued and unpaid interest due on the Notes exchanged divided by \$1,000).

Pursuant to the Securities Purchase Agreement, the Company filed the Certificate of Designations with the State of Delaware on December 19, 2008. The Certificate of Designations designates 10,000 shares of its preferred stock as Series B Convertible Preferred Stock ("the Preferred Stock"). The Preferred Stock has a stated value of \$1,000 and has a conversion price of \$0.75 per share. The Preferred Stock does not pay interest. The holders of the Preferred Stock are not entitled to receive dividends unless the Company's Board of Directors declared a dividend for holders of its common stock and then the dividend shall be equal to the amount that such holder would have been entitled to receive if the holder converted its Preferred Stock into shares of its common stock. Each share of Preferred Stock has voting rights equal to (i) the number of shares of its common stock issuable upon conversion of such shares of Preferred Stock at such time (determined without regard to the shares of common stock so issuable upon such conversion in respect of accrued and unpaid dividends on such share of Preferred Stock) when the Preferred Stock votes together with its common stock or any other class or series of its stock and (ii) one vote per share of Preferred Stock when such vote is not covered by the immediately preceding clause. The Company may at its option redeem the Preferred Stock by providing the required notice to the holders of the Preferred Stock and paying an amount equal to \$1,000 multiplied by the number of shares for all of such holder's shares of outstanding Preferred Stock to be redeemed.

The Company also entered into a Registration Rights Agreement with Stillwater to register for resale the shares of the common stock issuable upon conversion of the Preferred Stock sold in the offering and the shares of common stock issuable upon exercise of the warrants. Subject to the terms of the Registration Rights Agreement, the Company is required to file a registration statement (the "Registration Statement") on Form S-1 with the Securities and Exchange Commission (the "SEC") within 30 days following the date that the Company is permitted to file a registration statement by (i) the rules and regulations of the Securities and Exchange Commission and (ii) the agreements set forth on Schedule B to the Registration Rights Agreement, which as of December 18, 2008 prohibits the Company from filing the initial Registration Statement until certain other registration statements are filed. After filing the Registration Statement, the Company is to cause such Registration Statement to be declared effective under the Securities Act of 1933 (the "Act") as promptly as possible after the filing thereof, but in no event later than 90 days after the filing date (or no later than 120 days after the filing date in the event of SEC "full review" of the Registration Statement). The Holders of Notes that exchanged their Notes pursuant to the Exchange Agreement received the same registration rights as Stillwater.

Pursuant to the Securities Purchase Agreement, the Company claims an exemption from the registration requirements of the Act for the private placement of these securities pursuant to Section 4(2) of the Securities Act of 1933, as amended (the "Act") and/or Regulation D promulgated thereunder since, among other things, the transaction did not involve a public offering, the investors were accredited investors and/or qualified institutional buyers, the investors had access to information about the Company and their investment, the investors took the securities for investment and not resale, and the Company took appropriate measures to restrict the transfer of the securities.

Amendment of Stillwater Note Purchase Agreement - April 2007

As previously reported in the Form 8-K dated July 25, 2006, on July 21, 2006, eMagin Corporation (the "Company") entered into a Note Purchase Agreement (the "Stillwater Agreement") with Stillwater LLC ("Stillwater") which provides for the purchase and sale of a 6% senior secured convertible note in the principal amount of up to \$500,000 (the "Stillwater Note"), together with a warrant (the "Stillwater Warrant") to purchase 70% of the number of shares issuable upon conversion of the Stillwater Note, at the sole discretion of the Company by delivery of a notice to Stillwater on December 14, 2006. Interest payments from the Stillwater Note are to be made in cash, unless Stillwater elects to convert any portion of the principal of the Stillwater Note plus any accrued and unpaid interest for such principal amount.

As previously reported in the Form 8-K dated April 13, 2007, by way of amendment to the Stillwater Agreement, dated March 28, 2007 (the "Amendment"), the Company and Stillwater agreed to certain amendments to the Stillwater Agreement. Based upon the provisions of the Stillwater Agreement, Stillwater was bound to purchase the Stillwater Note and the Stillwater Warrant so long as the conditions to closing as set forth in the Stillwater Agreement were satisfied by the Company. However, prior to Stillwater's obligation to purchase the Stillwater Note and Stillwater Warrant, the Company received notice from the American Stock Exchange ("AMEX") that it was no longer in compliance with their listing requirements, and the Company was subsequently de-listed in March of 2007. Since compliance with the AMEX listing requirements was a condition of closing in the Stillwater Agreement, Stillwater was no longer obligated to purchase the Stillwater Note and Stillwater Warrant. Therefore, among other things, pursuant to the Amendment, the parties agreed to a new conversion price for the Stillwater Note of \$0.35 per share, a new exercise price for the Stillwater Warrant of \$0.48 per share, a new closing date, and amended certain closing conditions, including the following: on the closing date, (i) trading in securities on the New York Stock Exchange, Inc., the AMEX, Nasdaq, the Nasdaq Capital Market, the Over-The-Counter Bulletin Board, the Pink Sheets, LLC or any similar organization shall not have been suspended or materially limited, (ii) a general moratorium on commercial banking activities in the State of New York shall not have been declared by either federal or state authorities, and (iii) the Company has obtained waivers from all the note holders of the other notes or has executed an additional Allonge with the majority holders to amend Section 3.2 of the Note and other notes to provide that the Company maintain cash and cash equivalents balances of at least equal to \$200,000 from April 1, 2007 through and including May 15, 2007 and that subsequent to May 15, 2007 the Company maintain cash and cash equivalents balances of at least equal to \$600,000.

If the entire Stillwater Warrant is exercised for cash, the Company would receive \$480,000, which would be used for working capital and other corporate purposes. There cannot be any assurances that any of the Stillwater Warrant will be exercised. The closing for the sale of the Stillwater Note and Stillwater Warrant was completed on April 9, 2007 and the Company issued Stillwater the Stillwater Note in a 6% Senior Secured Convertible Note in the principal amount of \$500,000 and the Stillwater Warrant to purchase 1,000,000 shares of the Company's common stock at an exercise price of \$0.48 in accordance with the terms of the Stillwater Agreement and Amendment. Interest payments from the Stillwater Note are to be made in cash, unless Stillwater elects to convert any portion of the principal of the Stillwater Note plus any accrued and unpaid interest for such principal amount pursuant to the terms of the Stillwater Note. The principal of the Stillwater Note was due in installments as follows:

Principal Amount	Due Date*
\$ 250,000	July 23, 2007**

\$ 250,000	January 21, 2008 ***
------------	----------------------

* If the due date falls on a non-business day, the due date will be the next business day.

** As disclosed above, on July, 23 2007, Stillwater elected to convert \$252,166.50 of the Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note due on July 23, 2007 and \$2,166.50 of accrued and unpaid interest into shares of common stock. Stillwater received 720,476 shares of the common stock at the conversion price of \$0.35 pursuant to the terms of the Stillwater Note.

*** As disclosed above, on December 22, 2008 Stillwater elected to convert \$251,166.67 of the remaining Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note originally due on January 21, 2008 and extended to December 22, 2008 (as discussed below) and \$1,116.67 of accrued and unpaid interest into shares of common stock. Stillwater received 717,620 shares of common stock at a conversion price of \$0.35 pursuant to the terms of the Stillwater Note.

This prospectus covers the resale by Stillwater of the above-referenced common stock underlying the Stillwater Note and the Stillwater Warrant.

Amendment Agreements - July 2007

As previously reported in the Form 8-K of the Company dated as of July 25, 2006, the Company entered into several Note Purchase Agreements (the "Original Purchase Agreements"), including the Stillwater Agreement, to sell to certain qualified institutional buyers and accredited investors \$5,990,000 in principal amount 6% Senior Secured Convertible Notes Due July 21, 2007 and January 21, 2008 (the "Notes"), together with warrants (the "Warrants") to purchase 1,612,700 shares of the Company's common stock, par value \$0.001 per share at \$3.60 per share.

As previously reported in the Form 8-K of the Company dated as of July 25, 2007, by way of Amendment Agreements dated July 23, 2007 (the "Amendment Agreements") between the Company and each of the holders of the Notes, including Stillwater (each a "Holder" and collectively, the "Holders"), the Company agreed to issue each Holder an amended and restated Note for the outstanding Notes (the "Amended Notes") in the principal amount equal to the principal amount outstanding as of July 23, 2007 and an amended restated Warrant (the "Amended Warrants"). As part of the Amendment Agreements, the maturity date for the Amended Notes was extended to December 22, 2008. The outstanding principal and accrued and unpaid interest of Amended Notes were repaid on December 22, 2008 except

for those three Holders that elected to exchange their Amended Notes into Preferred Stock pursuant to the Exchange Agreement (as disclosed above). The changes to the Amended Warrants include the following:

- Except for the Stillwater Warrant whose exercise price was unchanged, the Amendment Agreements adjusted the exercise price of the Amended Warrants from \$3.60 to \$1.03 per share for 1,553,468 shares of common stock and requires the issuance of Warrants exercisable for an additional 3,831,859 shares of common stock at \$1.03 per share with an expiration date of July 21, 2011; and
- The Amended Warrants are subject to certain anti-dilution adjustment rights in the event the Company issues shares of its common stock or securities convertible into its common stock at a price per share that is less than the Strike Price, in which case the Strike Price shall be adjusted to the lower of (1) 138% of the price at which such common stock is issued or issuable and (2) the exercise price of warrants, issued in such transaction.

Pursuant to the Amendment Agreements, the Company filed a Certificate of Designations of Series A Senior Secured Convertible Preferred Stock (the "Certificate of Designations"). The Certificate of Designations designates 3,198 shares of the Company's preferred stock as Series A Senior Secured Convertible Preferred Stock (the "Preferred Stock"). Each share of the Preferred Stock has a stated value of \$1,000. The Preferred Stock is entitled to cumulative dividends which accrue at a rate of 8% per annum, payable on December 21, 2008. Each share of Preferred Stock has voting rights equal to (1) in any case in which the Preferred Stock votes together with the Company's common stock or any other class or series of stock of the Company, the number of shares of common stock issuable upon conversion of such shares of Preferred Stock at such time (determined without regard to the shares of common stock so issuable upon such conversion in respect of accrued and unpaid dividends on such share of Preferred Stock) and (2) in any case not covered by the immediately preceding clause one vote per share of Preferred Stock. The Certificate of Designations prohibits the Company from entering into a Fundamental Change without consent of the Holders and contains antidilution adjustments rights that are comparable to the antidilution adjustments contained in the Amended Notes. Pursuant to the Certificate of Designations, the Company was to redeem any shares of its outstanding shares of Series A Senior Secured Convertible Preferred Stock that were outstanding on December 21, 2008, however, no such shares were issued or outstanding on such date.

Pursuant to the Amendment Agreements, the Company was required to file a registration statement with the Securities and Exchange Commission by August 31, 2007 covering the resale of 100% of the sum of (a) the number of shares issuable upon conversion of the Amended Notes and Preferred Stock, and (b) the number of shares issuable upon exercise of the Warrants.

The summary of amendment terms contained herein does not include all information included in the Amendment Agreement, the Amended Notes, the Amended Warrants, the Certificate of Designations or the Ancillary Agreements and, consequently, is qualified in its entirety by reference to the entire text of the Amendment Agreements and the forms of the Amended Notes, Amended Warrants, Certificate of Designations, Amendment No. 1 to Pledge and Security Agreement, Amendment No. 1 to Patent and Trademark Security Agreement and Amendment No. 1 to Lockbox Agreement.

Securities Purchase Agreement – April 2008

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on April 4, 2008, the Company entered into a Securities Purchase Agreement on April 2, 2008, (the "Purchase Agreement") pursuant to which it sold to certain qualified institutional buyers and accredited investors (the "Investors") an aggregate of 1,586,539 shares of the Company's common stock, par value \$0.001 per share (the "Shares"), and warrants to purchase an additional 793,273 shares of common stock, for an aggregate purchase price of \$1,650,000. The purchase price of the common stock was \$1.04 per share and the strike price of the corresponding warrant was \$1.30 per share. The warrants expire April 2, 2013.

The Company entered into a Registration Rights Agreement with the Investors to register the resale of the Shares sold in the offering and the shares of common stock issuable upon exercise of the warrants. Subject to the terms of the Registration Rights Agreement, the Company is required to file a registration statement on Form S-1 with the Securities and Exchange Commission (the "SEC") within 45 days of the closing, to use its best efforts to cause the registration statement to be declared effective under the Securities Act of 1933 (the "Act") as promptly as possible after the filing thereof, but in no event later than 90 days after the filing date and no later than 120 days after the filing date in the event of SEC review of the registration statement. The Company filed the registration statement within the 45 day period however the Company was notified that the registration statement was under review by the SEC. The Company failed to file the amended registration statement by August 2, 2008 which was the 120th day from the signing of the Purchase Agreement and therefore the registration statement is not effective.

As the registration statement was not effective within the grace periods (“Event Date”), the Company must pay partial liquidated damages (“damages”) in cash to each Investor equal to 2% of the aggregate purchase price paid by each Investor under the Purchase Agreement on the Event Date and each monthly anniversary of the Event Date (or on a pro-rata basis for any portion of a month) until the registration statement is effective. The Company is not liable for any damages with respect to the warrants or warrant shares. The maximum damages payable to each Investor is 36% of the aggregate purchase price. If the Company fails to pay the damages to the Investors within 7 days after the date payable, the Company must pay interest at a rate of 15% per annum to each Investor which accrues daily from the date payable until damages are paid in full. The Company estimated \$399 thousand to be the maximum potential damages that the Company may be required to pay the Investors if the registration statement is not effective within three years of the signing of the agreement. The Company estimated \$186 thousand to be a reasonable estimate of the potential damages that may be due to the Investors based on the anticipated filing date.

The Company claims an exemption from the registration requirements of the Act for the private placement of these securities pursuant to Section 4(2) of the Act and/or Regulation D promulgated thereunder since, among other things, the transaction did not involve a public offering, the investors were accredited investors and/or qualified institutional buyers, the investors had access to information about the company and their investment, the investors took the securities for investment and not resale, and the Company took appropriate measures to restrict the transfer of the securities.

Moriah Capital Loan Agreement and Amendments

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on August 10, 2007, the Company and Moriah Capital LP (“Moriah”) entered into a Loan and Security Agreement, dated as of August 7, 2007 (the “Loan and Security Agreement”), which was amended as of January 30, 2008 by Amendment No. 1 and on March 18, 2008 by Amendment No. 2 (collectively, the “Original Agreement”).

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on August 26, 2008, the Company and Moriah entered into Amendment No. 3 to the Loan and Security Agreement dated August 20, 2008 (the “Amendment No. 3”). Pursuant to Amendment No. 3, the Company issued Moriah an Amended and Restated Convertible Revolving Loan Note (the “Amended Note”). The maturity date of the Amended Note has been extended to August 7, 2009 and the maximum amount that the Company can borrow pursuant to the Amended Note was increased to \$3,000,000. The maturity date of the original revolving loan note had previously been extended to August 20, 2008.

Pursuant to Amendment No. 3, the Company issued Moriah a warrant, which terminates on August 7, 2013, to purchase up to 370,000 shares of the Company’s common stock at an exercise price of \$1.30 per share. In connection with Amendment No. 3, the Company paid Moriah \$85,000 in fees. As previously reported, pursuant to Original Agreement, the Company issued Moriah warrants to purchase up to 1,000,000 shares of the Company’s common stock at an exercise price of \$1.50 per share.

Pursuant to Amendment No. 3, the Company and Moriah entered into an Amended and Restated Securities Issuance agreement (the “Amended and Restated Securities Issuance Agreement”). In connection with a Securities Issuance Agreement, dated as of August 7, 2007 (the “Original Securities Issuance Agreement”), the Company issued Moriah 162,500 shares of the Company’s common stock (the “2007 Shares”). Pursuant to the Amended and Restated Securities Issuance Agreement, Moriah agreed to waive the Company’s obligation to buy back the 2007 Shares with respect to 125,000 of such shares and to defer the Company’s obligation to buy back 37,500 of such 2007 Shares (collectively, the “Put Waiver”). Pursuant to the Amended and Restated Securities Agreement, the Company is issuing Moriah 485,000 shares of its Common Stock (of which 125,000 shares were issued in consideration for the Put Waiver from Moriah and 360,000 shares were issued in lieu of the issuance to Moriah of the Contingent Issued Shares (as described in the Original Securities Issuance Agreement)). Additionally, pursuant to the Amended and Restated Securities Issuance Agreement, the Company has also granted Moriah a put option pursuant to which Moriah can sell to the Company 162,500 shares of its common stock issued under the Amended and Restated Securities Agreement for \$195,000, pro-rated for any portion thereof (the “2007 Put Price”). The 2007 Put Option shall automatically be deemed exercised by Moriah unless Moriah delivers written notice to the Company at any time between July 1, 2009 and August 1, 2009 that it does not wish to exercise the 2007 Put Option. The Company also granted Moriah a second put option pursuant to which Moriah can sell 360,000 of the shares issued to Moriah pursuant to the Amended and Restated Securities Purchase Agreement to the Company for \$234,000 (the “2008 Put Option”). The 2008 Put Option shall automatically be deemed exercised by Moriah unless Moriah delivers written notice to the Company at any time between July 1, 2009 and August 1, 2009 that Moriah does not wish to exercise the 2008 Put option in whole or in part.

Pursuant to Amendment No. 3, the Company and Moriah entered into an Amendment to Registration Rights Agreement (the “Amended Registration Rights Agreement”). Pursuant to the Amended Registration Rights Agreement, the Company agreed to use its best efforts to file a registration statement to register the 485,000 shares of the Company’s common stock issued pursuant to the Amended and Restated Securities Issuance Agreement and the shares of common stock issuable upon exercise of the Warrant, provided that the Company is permitted under applicable securities rules and regulations and after the certain other registration statements that the Company was obligated to file on behalf of selling shareholders have been declared effective.

On August 19, 2008, the Holders of the Amended Notes and the Investors in the Purchase Agreement consented to the Company's execution of the Amended Note, Amendment No. 3, Amended and Restated Securities Issuance Agreement, and the Amended Registration Rights Agreement. In consideration for the consent, a total of 144,000 shares of common stock were issued to the Holders and Investors based on individual participation in the Amended Notes and Securities Purchase Agreement on September 4, 2008.

The Company claims an exemption from the registration requirements of the Securities Act of 1933, amended (the "Act") for the private placement of the above-referenced securities pursuant to Section 4(2) of the Act since, among other things, these transactions did not involve a public offering and the Company took appropriate measures to restrict the transfer of the securities.

The foregoing description of Amendment No. 3 to the Loan and Security Agreement, the Amended and Restated Revolving Loan Note, the Amended and Restated Securities Issuance Agreement, and the Amendment to the Registration Rights Agreement does not purport to be complete and is qualified in its entirety by reference to the entire text of the agreements.

SUMMARY CONSOLIDATED FINANCIAL DATA

The following summary consolidated financial data should be read in conjunction with our consolidated financial statements and related notes and “Management’s Discussion and Analysis of Financial Condition and Results of Operations”. The statements of operations data for the years ended December 31, 2007, 2006, and 2005 and the balance sheet data at December 31, 2007 and 2006 are derived from our audited financial statements which are included in our Form 10-K/A filed with the Securities and Exchange Commission on January 13, 2009 and included elsewhere herein. The statements of operations data for the years ended December 31, 2004 and 2003 and the balance sheet data at December 31, 2005, 2004, and 2003 are derived from our audited financial statements which are not included herein. The statements of operations data for the nine months ended September 30, 2008 and 2007 and the balance sheet data at September 30, 2008 are derived from our unaudited condensed consolidated interim financial statements filed with the Securities and Exchange Commission on November 14, 2008. The balance sheet data at September 30, 2007 was derived from our unaudited condensed consolidated interim financial statements filed with the Securities and Exchange Commission on November 19, 2007. The historical results are not necessarily indicative of results to be expected for future periods. The following information is presented in thousands, except per share data.

Consolidated Statements of Operations Data:

	Year Ended December 31,					Nine Months Ended September 30, (unaudited)	
	2007	2006	2005	2004	2003	2008	2007
	(In thousands, except per share data)						
Revenue	\$ 17,554	\$ 8,169	\$ 3,745	\$ 3,593	\$ 2,578	\$ 13,469	\$ 12,912
Cost of goods sold	12,628	11,359	10,219	5,966	5,141	8,110	9,120
Gross profit (loss)	4,926	(3,190)	(6,474)	(2,373)	(2,563)	5,359	3,792
Operating expenses:

RISK FACTORS

You should carefully consider the following risk factors and the other information included herein as well as the information included in other reports and filings made with the SEC before investing in our common stock. If any of the following risks actually occurs, our business, financial condition or results of operations could be harmed. The trading price of our common stock could decline due to any of these risks, and you may lose part or all of your investment.

RISKS RELATED TO OUR FINANCIAL RESULTS

We have a history of losses since our inception and may incur losses for the foreseeable future

For the three and nine months ended September 30, 2008, we had net income of \$361 thousand and a net loss of \$2.4 million, respectively. Our accumulated losses are \$202 million as of September 30, 2008. We have achieved profitability for the three months ended September 30, 2008, however we cannot give assurance that we will continue to achieve profitability within the foreseeable future as we fund operating and capital expenditures in areas such as market development, sales and marketing, manufacturing equipment, acquisitions, and research and development. We cannot assure investors that we will sustain profitability or that our operating losses will not increase in the future.

We may not be able to execute our business plan and may not generate cash from operations.

As we have reported, our business has experienced and is currently experiencing revenue growth during the nine months ended September 30, 2008. We anticipate that our cash requirements to fund operating or investing activities over the next twelve months may be greater than our current cash on hand and borrowing availability under our revolving credit facility. In the event that cash flow from operations is less than anticipated and we are unable to secure additional funding to cover our expenses, in order to preserve cash, we would be required to reduce expenditures and effect reductions in our corporate infrastructure, either of which could have a material adverse effect on our ability to continue our current level of operations. No assurance can be given that additional financing will be available, or if available, will be on acceptable terms.

We may be subject to fines, sanctions, and/or penalties of an indeterminable nature as a result of potential violations of federal securities laws.

In July 2006, we entered into a Note Purchase Agreement with Stillwater LLC, which provided for the purchase and sale of a 6% senior secured convertible note in principal amount of up to \$500,000 (the "Stillwater Note") and a warrant to purchase 70% percent of the number of shares issuable upon conversion of the Stillwater Note, at our sole discretion by delivery of a notice to Stillwater on December 14, 2006. We then filed a registration statement on Form S-3 up to 41,088,445 shares of common stock issuable upon conversion of our 6% senior secured convertible notes or exercise of warrants, which following the effectuation by the Company of a one-for-ten reverse stock split on November 3, 2006, amounted to 4,108,845 shares. In July 2007, we amended the agreements with Stillwater. Amending the Stillwater agreements without first withdrawing the Registration Statement on Form S-3 may be inconsistent with Section 5 of the Securities Act of 1933, as amended, and we may be subject to fines, sanctions and/or penalties of an indeterminable nature as a result of potential violations of federal securities laws. If we are assessed fines and penalties our business will be materially affected.

The issuance of shares of common stock in connection with the conversion of the Notes may have not have been in compliance with certain state and federal securities laws and any damages that we may have to pay as a result of such issuance could have a material adverse effect on our revenues, profits, results of operations, financial condition and future prospects.

Our financial statements indicate that there is substantial doubt about our ability to continue as a going concern, which may hinder our ability to obtain future financing.

Our unaudited condensed consolidated financial statements as of September 30, 2008 have been prepared under the assumption that we will continue as a going concern. Our independent registered public accounting firm issued a report dated January 8, 2009 in connection with the audit of the 2007 financial statements that included an explanatory paragraph expressing substantial doubt as to our ability to continue as a going concern. Our ability to continue as a going concern ultimately depends on our ability to generate a profit which is likely dependent upon our ability to obtain additional equity or debt financing, attain further operating efficiencies and, ultimately, to achieve profitable operations. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

RISKS RELATED TO MANUFACTURING

The manufacture of OLED-on-silicon is new and OLED microdisplays have not been produced in significant quantities.

If we are unable to produce our products in sufficient quantity, we will be unable to maintain and attract new customers. In addition, we cannot assure you that once we commence volume production we will attain yields at high throughput that will result in profitable gross margins or that we will not experience manufacturing problems which could result in delays in delivery of orders or product introductions.

We are dependent on a single manufacturing line.

We currently manufacture our products on a single manufacturing line. If we experience any significant disruption in the operation of our manufacturing facility or a serious failure of a critical piece of equipment, we may be unable to supply microdisplays to our customers. For this reason, some OEMs may also be reluctant to commit a broad line of products to our microdisplays without a second production facility in place. However, we try to maintain product inventory to fill the requirements under such circumstances. Interruptions in our manufacturing could be caused by manufacturing equipment problems, the introduction of new equipment into the manufacturing process or delays in the delivery of new manufacturing equipment. Lead-time for delivery of manufacturing equipment can be extensive. No assurance can be given that we will not lose potential sales or be unable to meet production orders due to production interruptions in our manufacturing line. In order to meet the requirements of certain OEMs for multiple manufacturing sites, we will have to expend capital to secure additional sites and may not be able to manage multiple sites successfully.

We could experience manufacturing interruptions, delays, or inefficiencies if we are unable to timely and reliably procure components from single-sourced suppliers.

We maintain several single-source supplier relationships, either because alternative sources are not available or because the relationship is advantageous due to performance, quality, support, delivery, capacity, or price considerations. If the supply of a critical single-source material or component is delayed or curtailed, we may not be able to ship the related product in desired quantities and in a timely manner. Even where alternative sources of supply are available, qualification of the alternative suppliers and establishment of reliable supplies could result in delays and a possible loss of sales, which could harm operating results.

We expect to depend on semiconductor contract manufacturers to supply our silicon integrated circuits and other suppliers of key components, materials and services.

We do not manufacture the silicon integrated circuits on which we incorporate our OLED technology. Instead, we expect to provide the design layouts to semiconductor contract manufacturers who will manufacture the integrated circuits on silicon wafers. We also expect to depend on suppliers of a variety of other components and services, including circuit boards, graphic integrated circuits, passive components, materials and chemicals, and equipment support. Our inability to obtain sufficient quantities of high quality silicon integrated circuits or other necessary components, materials or services on a timely basis could result in manufacturing delays, increased costs and ultimately in reduced or delayed sales or lost orders which could materially and adversely affect our operating results.

RISKS RELATED TO OUR INTELLECTUAL PROPERTY

We rely on our license agreement with Eastman Kodak for the development of our products.

We rely on our license agreement with Eastman Kodak for the development of our products, and the termination of this license, Eastman Kodak's licensing of its OLED technology to others for microdisplay applications, or the sublicensing by Eastman Kodak of our OLED technology to third parties, could have a material adverse impact on our business.

Our principal products under development utilize OLED technology that we license from Eastman Kodak. We rely upon Eastman Kodak to protect and enforce key patents held by Eastman Kodak, relating to OLED display technology. Eastman Kodak's patents expire at various times in the future. Our license with Eastman Kodak could terminate if we fail to perform any material term or covenant under the license agreement. Since our license from Eastman Kodak is non-exclusive, Eastman Kodak could also elect to become a competitor itself or to license OLED technology for microdisplay applications to others who have the potential to compete with us. The occurrence of any of these events could have a material adverse impact on our business.

We may not be successful in protecting our intellectual property and proprietary rights.

We rely on a combination of patents, trade secret protection, licensing agreements and other arrangements to establish and protect our proprietary technologies. If we fail to successfully enforce our intellectual property rights, our competitive position could suffer, which could harm our operating results. Patents may not be issued for our current patent applications, third parties may challenge, invalidate or circumvent any patent issued to us, unauthorized parties could obtain and use information that we regard as proprietary despite our efforts to protect our proprietary rights, rights granted under patents issued to us may not afford us any competitive advantage, others may independently develop similar technology or design around our patents, our technology may be available to licensees of Eastman Kodak, and protection of our intellectual property rights may be limited in certain foreign countries. On April 30, 2007, the U.S. Supreme Court, in *KSR International Co. vs. Teleflex, Inc.*, mandated a more expansive and flexible

approach towards a determination as to whether a patent is obvious and invalid, which may make it more difficult for patent holders to secure or maintain existing patents. Any future infringement or other claims or prosecutions related to our intellectual property could have a material adverse effect on our business. Any such claims, with or without merit, could be time consuming to defend, result in costly litigation, divert management's attention and resources, or require us to enter into royalty or licensing agreements. Such royalty or licensing agreements, if required, may not be available on terms acceptable to us, if at all. Protection of intellectual property has historically been a large yearly expense for eMagin. We have not been in a financial position to properly protect all of our intellectual property, and may not be in a position to properly protect our position or stay ahead of competition in new research and the protecting of the resulting intellectual property.

RISKS RELATED TO THE MICRODISPLAY INDUSTRY

The commercial success of the microdisplay industry depends on the widespread market acceptance of microdisplay systems products.

The market for microdisplays is emerging. Our success will depend on consumer acceptance of microdisplays as well as the success of the commercialization of the microdisplay market. As an OEM supplier, our customer's products must also be well accepted. At present, it is difficult to assess or predict with any assurance the potential size, timing and viability of market opportunities for our technology in this market. The viewfinder microdisplay market sector is well established with entrenched competitors with whom we must compete.

The microdisplay systems business is intensely competitive.

We do business in intensely competitive markets that are characterized by rapid technological change, changes in market requirements and competition from both other suppliers and our potential OEM customers. Such markets are typically characterized by price erosion. This intense competition could result in pricing pressures, lower sales, reduced margins, and lower market share. Our ability to compete successfully will depend on a number of factors, both within and outside our control. We expect these factors to include the following:

- our success in designing, manufacturing and delivering expected new products, including those implementing new technologies on a timely basis;
 - our ability to address the needs of our customers and the quality of our customer services;
 - the quality, performance, reliability, features, ease of use and pricing of our products;
 - successful expansion of our manufacturing capabilities;
 - our efficiency of production, and ability to manufacture and ship products on time;
- the rate at which original equipment manufacturing customers incorporate our product solutions into their own products;
 - the market acceptance of our customers' products; and
 - product or technology introductions by our competitors.

Our competitive position could be damaged if one or more potential OEM customers decide to manufacture their own microdisplays, using OLED or alternate technologies. In addition, our customers may be reluctant to rely on a relatively small company such as eMagin for a critical component. We cannot assure you that we will be able to compete successfully against current and future competition, and the failure to do so would have a materially adverse effect upon our business, operating results and financial condition.

The display industry may be cyclical.

Our business strategy is dependent on OEM manufacturers building and selling products that incorporate our OLED displays as components into those products. Industry-wide fluctuations and downturns in the demand for flat panel displays could cause significant harm to our business. The OLED microdisplay sector may experience overcapacity, if and when all of the facilities presently in the planning stage come on line, leading to a difficult market in which to sell our products.

Competing products may get to market sooner than ours.

Our competitors are investing substantial resources in the development and manufacture of microdisplay systems using alternative technologies such as reflective liquid crystal displays (LCDs), LCD-on-Silicon ("LCOS") microdisplays, active matrix electroluminescence and scanning image systems, and transmissive active matrix LCDs.

Our competitive position could be damaged if one or more of our competitors' products get to the market sooner than our products. We cannot assure you that our product will get to market ahead of our competitors or that we will be able to compete successfully against current and future competition. The failure to do so would have a materially adverse effect upon our business, operating results and financial condition.

Our competitors have many advantages over us.

As the microdisplay market develops, we expect to experience intense competition from numerous domestic and foreign companies including well-established corporations possessing worldwide manufacturing and production facilities, greater name recognition, larger retail bases and significantly greater financial, technical, and marketing resources than us, as well as from emerging companies attempting to obtain a share of the various markets in which our microdisplay products have the potential to compete. We cannot assure you that we will be able to compete successfully against current and future competition, and the failure to do so would have a materially adverse effect upon our business, operating results and financial condition.

Our products are subject to lengthy OEM development periods.

We plan to sell most of our microdisplays to OEMs who will incorporate them into products they sell. OEMs determine during their product development phase whether they will incorporate our products. The time elapsed between initial sampling of our products by OEMs, the custom design of our products to meet specific OEM product requirements, and the ultimate incorporation of our products into OEM consumer products is significant often with a duration of between one and three years. If our products fail to meet our OEM customers' cost, performance or technical requirements or if unexpected technical challenges arise in the integration of our products into OEM consumer products, our operating results could be significantly and adversely affected. Long delays in achieving customer qualification and incorporation of our products could adversely affect our business.

Our products will likely experience rapidly declining unit prices.

In the markets in which we expect to compete, prices of established products tend to decline significantly over time. In order to maintain our profit margins over the long term, we believe that we will need to continuously develop product enhancements and new technologies that will either slow price declines of our products or reduce the cost of producing and delivering our products. While we anticipate many opportunities to reduce production costs over time, there can be no assurance that these cost reduction plans will be successful, that we will have the resources to fund the expenditures necessary to implement certain cost-saving measures, or that our costs can be reduced as quickly as any reduction in unit prices. We may also attempt to offset the anticipated decrease in our average selling price by introducing new products, increasing our sales volumes or adjusting our product mix. If we fail to do so, our results of operations would be materially and adversely affected.

RISKS RELATED TO OUR BUSINESS

Our success depends on attracting and retaining highly skilled and qualified technical and consulting personnel.

We must hire highly skilled technical personnel as employees and as independent contractors in order to develop our products. The competition for skilled technical employees is intense and we may not be able to retain or recruit such personnel. We must compete with companies that possess greater financial and other resources than we do, and that may be more attractive to potential employees and contractors. To be competitive, we may have to increase the compensation, bonuses, stock options and other fringe benefits offered to employees in order to attract and retain such personnel. The costs of attracting and retaining new personnel may have a materially adverse effect on our business and our operating results. In addition, difficulties in hiring and retaining technical personnel could delay the implementation of our business plan.

Our success depends in a large part on the continuing service of key personnel.

Changes in management could have an adverse effect on our business. We are dependent upon the active participation of several key management personnel and will also need to recruit additional management in order to expand according to our business plan. The failure to attract and retain additional management or personnel could have a material adverse effect on our operating results and financial performance.

The ineffectiveness of our internal control over financial reporting could result in a loss of investor confidence in our financial reports and have an adverse effect on our stock price.

Pursuant to Section 404 of the Sarbanes-Oxley Act of 2002 (“Section 404”), and the rules and regulations promulgated by the SEC to implement Section 404, we are required to include in our Form 10-K an annual report by our management regarding the effectiveness of our internal control over financial reporting. The report includes, among other things, an assessment of the effectiveness of our internal control over financial reporting as of the end of our fiscal year. This assessment must include disclosure of any material weaknesses in our internal control over financial reporting identified by management.

As of September 30, 2008, our internal control over financial reporting was ineffective due to the presence of material weaknesses, as more fully described in Item 4T of the September 30, 2008 Form 10-Q filed with the SEC on November 14, 2008. This could result in a loss of investor confidence in the accuracy and completeness of our financial reports, which may have an adverse effect on our stock price.

Our business depends on new products and technologies.

The market for our products is characterized by rapid changes in product, design and manufacturing process technologies. Our success depends to a large extent on our ability to develop and manufacture new products and technologies to match the varying requirements of different customers in order to establish a competitive position and become profitable. Furthermore, we must adopt our products and processes to technological changes and emerging industry standards and practices on a cost-effective and timely basis. Our failure to accomplish any of the above could harm our business and operating results.

We generally do not have long-term contracts with our customers.

Our business has primarily operated on the basis of short-term purchase orders. We are now receiving longer term purchase agreements, such as those which comprise our approximately \$4.5 million backlog as of January 5, 2009, and procurement contracts, but we cannot guarantee that we will continue to do so. Our current purchase agreements can be cancelled or revised without penalty, depending on the circumstances. We plan production on the basis of internally generated forecasts of demand, which makes it difficult to accurately forecast revenues. If we fail to accurately forecast operating results, our business may suffer and the value of your investment in eMagin may decline.

Our business strategy may fail if we cannot continue to form strategic relationships with companies that manufacture and use products that could incorporate our OLED-on-silicon technology.

Our prospects will be significantly affected by our ability to develop strategic alliances with OEMs for incorporation of our OLED-on-silicon technology into their products. While we intend to continue to establish strategic relationships with manufacturers of electronic consumer products, personal computers, chipmakers, lens makers, equipment makers, material suppliers and/or systems assemblers, there is no assurance that we will be able to continue to establish and maintain strategic relationships on commercially acceptable terms, or that the alliances we do enter in to will realize their objectives. Failure to do so would have a material adverse effect on our business.

Our business depends to some extent on international transactions.

We purchase needed materials from companies located abroad and may be adversely affected by political and currency risk, as well as the additional costs of doing business with foreign entities. Some customers in other countries have longer receivable periods or warranty periods. In addition, many of the foreign OEMs that are the most likely long-term purchasers of our microdisplays expose us to additional political and currency risk. We may find it necessary to locate manufacturing facilities abroad to be closer to our customers which could expose us to various risks, including management of a multi-national organization, the complexities of complying with foreign laws and customs, political instability and the complexities of taxation in multiple jurisdictions.

Our business may expose us to product liability claims.

Our business may expose us to potential product liability claims. Although no such claims have been brought against us to date, and to our knowledge no such claim is threatened or likely, we may face liability to product users for damages resulting from the faulty design or manufacture of our products. While we plan to maintain product liability insurance coverage, there can be no assurance that product liability claims will not exceed coverage limits, fall outside the scope of such coverage, or that such insurance will continue to be available at commercially reasonable rates, if at all.

Our business is subject to environmental regulations and possible liability arising from potential employee claims of exposure to harmful substances used in the development and manufacture of our products.

We are subject to various governmental regulations related to toxic, volatile, experimental and other hazardous chemicals used in our design and manufacturing process. Our failure to comply with these regulations could result in the imposition of fines or in the suspension or cessation of our operations. Compliance with these regulations could require us to acquire costly equipment or to incur other significant expenses. We develop, evaluate and utilize new chemical compounds in the manufacture of our products. While we attempt to ensure that our employees are protected from exposure to hazardous materials, we cannot assure you that potentially harmful exposure will not occur or that we will not be liable to employees as a result.

RISKS RELATED TO OUR STOCK

The substantial number of shares that are or will be eligible for sale could cause our common stock price to decline even if eMagin is successful.

Sales of significant amounts of common stock in the public market, or the perception that such sales may occur, could materially affect the market price of our common stock. These sales might also make it more difficult for us to sell equity or equity-related securities in the future at a time and price that we deem appropriate. As of January 5, 2009, we have outstanding (i) options to purchase 1,615,673 shares, (ii) warrants to purchase 12,279,239 shares of common

stock, and (iii) preferred stock convertible into 7,652,000 shares of common stock.

We have a staggered board of directors and other anti-takeover provisions, which could inhibit potential investors or delay or prevent a change of control that may favor you.

Our Board of Directors is divided into three classes and our Board members are elected for terms that are staggered. This could discourage the efforts by others to obtain control of eMagin. Some of the provisions of our certificate of incorporation, our bylaws and Delaware law could, together or separately, discourage potential acquisition proposals or delay or prevent a change in control. In particular, our board of directors is authorized to issue up to 10,000,000 shares of preferred stock (less any outstanding shares of preferred stock) with rights and privileges that might be senior to our common stock, without the consent of the holders of the common stock.

FORWARD LOOKING STATEMENTS

We and our representatives may from time to time make written or oral statements that are “forward-looking,” including statements contained in this prospectus and other filings with the Securities and Exchange Commission, reports to our stockholders and news releases. All statements that express expectations, estimates, forecasts or projections are forward-looking statements. In addition, other written or oral statements which constitute forward-looking statements may be made by us or on our behalf. Words such as “expects,” “anticipates,” “intends,” “plans,” “believes,” “seeks,” “estimates,” “projects,” “forecasts,” “may,” “should,” variations of such words and similar expressions are intended to identify forward-looking statements. These statements are not guarantees of future performance and involve risks, uncertainties, and assumptions which are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed or forecasted in or suggested by such forward-looking statements. Among the important factors on which such statements are based are assumptions concerning our ability to obtain additional funding, our ability to compete against our competitors, our ability to integrate our acquisitions and our ability to attract and retain key employees.

USE OF PROCEEDS

This prospectus relates to shares of our common stock that may be offered and sold from time to time by the selling stockholders. We will not receive any proceeds from the sale of shares of common stock in this offering. However, we will receive the sale price of any common stock we sell to the selling stockholders upon exercise of the warrants owned by the selling stockholders. We expect to use the proceeds received from the exercise of the warrants, if any, for general working capital purposes. We have not declared or paid any dividends and do not currently expect to do so in the near future.

MARKET FOR COMMON EQUITY AND RELATED STOCKHOLDER MATTERS

Our common stock is quoted on the OTC Bulletin Board under the symbol “EMAN.OB.” The following table sets forth the high and low sales prices as reported by the OTC Bulletin Board Market for the periods indicated.

	High	Low
Fiscal 2006		
First Quarter	\$ 7.10	\$ 4.60
Second Quarter	\$ 5.70	\$ 2.50
Third Quarter	\$ 3.80	\$ 1.80
Fourth Quarter	\$ 2.50	\$ 1.01
Fiscal 2007		
First Quarter	\$ 1.08	\$ 0.26
Second Quarter	\$ 0.85	\$ 0.42
Third Quarter	\$ 1.64	\$ 0.65
Fourth Quarter	\$ 1.75	\$ 0.85
Fiscal 2008		
First Quarter	\$ 1.47	\$ 0.88
Second Quarter	\$ 1.05	\$ 0.63
Third Quarter	\$ 0.83	\$ 0.52
Fourth Quarter	\$ 0.75	\$ 0.21

As of January 5, 2009, there were 511 holders of record of our common stock. Because brokers and other institutions hold many of the shares on behalf of shareholders, we are unable to determine the actual number of shareholders

represented by these record holders.

Dividends

We have never declared or paid cash dividends on our common stock. We currently anticipate that we will retain all future earnings to fund the operation of our business and do not anticipate paying dividends on our common stock in the foreseeable future.

SELECTED FINANCIAL DATA

The following table summarizes our consolidated financial data for the periods presented. We prepared this information using our consolidated financial statements for each of the periods presented. The following selected consolidated financial data should be read in conjunction with our consolidated financial statements and related notes and “Management’s Discussion and Analysis of Financial Condition and Results of Operations”. The historical results are not necessarily indicative of results to be expected for future periods.

Consolidated Statements of Operations Data:

	Year Ended December 31,					Nine Months Ended September 30, (unaudited)	
	2007	2006	2005	2004	2003	2008	2007
	(In thousands, except per share data)

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

Introduction

The following discussion should be read in conjunction with the Financial Statements and Notes thereto. Our fiscal year ends December 31. This document contains certain forward-looking statements including, among others, anticipated trends in our financial condition and results of operations and our business strategy. (See Part I, Item 1A, "Risk Factors "). These forward-looking statements are based largely on our current expectations and are subject to a number of risks and uncertainties. Actual results could differ materially from these forward-looking statements. Important factors to consider in evaluating such forward-looking statements include (i) changes in external factors or in our internal budgeting process which might impact trends in our results of operations; (ii) unanticipated working capital or other cash requirements; (iii) changes in our business strategy or an inability to execute our strategy due to unanticipated changes in the industries in which we operate; and (iv) various competitive market factors that may prevent us from competing successfully in the marketplace.

Overview

We design and manufacture miniature displays, which we refer to as OLED-on-silicon-microdisplays, and microdisplay modules for virtual imaging, primarily for incorporation into the products of other manufacturers. Microdisplays are typically smaller than many postage stamps, but when viewed through a magnifier they can contain all of the information appearing on a high-resolution personal computer screen. Our microdisplays use organic light emitting diodes, or OLEDs, which emit light themselves when a current is passed through the device. Our technology permits OLEDs to be coated onto silicon chips to produce high resolution OLED-on-silicon microdisplays.

We believe that our OLED-on-silicon microdisplays offer a number of advantages in near to the eye applications over other current microdisplay technologies, including lower power requirements, less weight, fast video speed without flicker, and wider viewing angles. In addition, many computer and video electronic system functions can be built directly into the OLED-on-silicon microdisplay, resulting in compact systems with lower expected overall system costs relative to alternate microdisplay technologies.

Since our inception in 1996 through 2004, we derived the majority of our revenues from fees paid to us under research and development contracts, primarily with the U.S. federal government. We have devoted significant resources to the development and commercial launch of our products. We commenced limited initial sales of our SVGA+ microdisplay in May 2001 and commenced shipping samples of our SVGA-3D microdisplay in February 2002. As of January 5, 2009, we have a backlog of approximately \$4.5 million in products ordered for delivery through December 31, 2009. These products are being applied or considered for near-eye and headset applications in products such as entertainment and gaming headsets, handheld Internet and telecommunication appliances, viewfinders, and wearable computers to be manufactured by original equipment manufacturer (OEM) customers. We have also shipped a limited number of our Z800 3DVisor personal display systems. In addition to marketing OLED-on-silicon microdisplays as components, we also offer microdisplays as an integrated package, which we call Microviewer that includes a compact lens for viewing the microdisplay and electronic interfaces to convert the signal from our customer's product into a viewable image on the microdisplay. We are also developing head-wearable displays, including our Z800 3DVisor that incorporate our Microviewer.

We license our core OLED technology from Eastman Kodak and we have developed our own technology to create high performance OLED-on-silicon microdisplays and related optical systems. We believe our technology licensing agreement with Eastman Kodak, coupled with our own intellectual property portfolio, gives us a leadership position in OLED and OLED-on-silicon microdisplay technology. We believe that we are the only company to demonstrate

publicly and market full-color small molecule OLED-on-silicon microdisplays.

Company History

Historically, we have been a developmental stage company. As of January 1, 2003, we were no longer classified as a development stage company. We have transitioned to manufacturing our product and intend to significantly increase our marketing, sales, and research and development efforts, and expand our operating infrastructure. Currently, most of our operating expenses are fixed. If we are unable to generate significant revenues, our net losses in any given period could be greater than expected.

Critical Accounting Policies

The Securities and Exchange Commission ("SEC") defines "critical accounting policies" as those that require application of management's most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain and may change in subsequent periods. Not all of the accounting policies require management to make difficult, subjective or complex judgments or estimates. However, the following policies could be deemed to be critical within the SEC definition.

Revenue and Cost Recognition

Revenue on product sales is recognized when persuasive evidence of an arrangement exists, such as when a purchase order or contract is received from the customer, the price is fixed, title and risk of loss to the goods has changed and there is a reasonable assurance of collection of the sales proceeds. We obtain written purchase authorizations from our customers for a specified amount of product at a specified price and consider delivery to have occurred at the time of shipment. We record a reserve for estimated sales returns, which is reflected as a reduction of revenue at the time of revenue recognition. Products sold directly to consumers have a fifteen day right of return. Revenue on consumer products is deferred until the right of return has expired.

Revenues from research and development activities relating to firm fixed-price contracts are generally recognized on the percentage-of-completion method of accounting as costs are incurred (cost-to-cost basis). Revenues from research and development activities relating to cost-plus-fee contracts include costs incurred plus a portion of estimated fees or profits based on the relationship of costs incurred to total estimated costs. Contract costs include all direct material and labor costs and an allocation of allowable indirect costs as defined by each contract, as periodically adjusted to reflect revised agreed upon rates. These rates are subject to audit by the other party.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles in the United States requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements as well as the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates. These estimates and assumptions relate to recording net revenue, collectibility of accounts receivable, useful lives and impairment of tangible and intangible assets, accruals, income taxes, inventory realization and other factors. Management has exercised reasonable judgment in deriving these estimates. Consequently, a change in conditions could affect these estimates.

Fair Value of Financial Instruments

eMagin's cash, cash equivalents, accounts receivable, short-term investments, accounts payable and debt are stated at cost which approximates fair value due to the short-term nature of these instruments.

Stock-based Compensation

eMagin maintains several stock equity incentive plans. The 2005 Employee Stock Purchase Plan (the "ESPP") provides our employees with the opportunity to purchase common stock through payroll deductions. Employees purchase stock semi-annually at a price that is 85% of the fair market value at certain plan-defined dates. As of September 30, 2008, the number of shares of common stock available for issuance was 300,000. As of September 30, 2008, the plan had not been implemented.

The 2003 Stock Option Plan (the "2003 Plan") provides for grants of shares of common stock and options to purchase shares of common stock to employees, officers, directors and consultants. Under the 2003 plan, an ISO grant is granted at the market value of our common stock at the date of the grant and a non-ISO is granted at a price not to be less than 85% of the market value of the common stock. These options have a term of up to 10 years and vest over a schedule determined by the Board of Directors, generally over a five year period. The amended 2003 Plan provides for an annual increase of 3% of the diluted shares outstanding on January 1 of each year for a period of 9 years which commenced January 1, 2005.

Effective January 1, 2006, the Company adopted the provisions of SFAS No. 123R, "Share-Based Payment" ("SFAS 123R"), which requires the Company to recognize expense related to the fair value of the Company's share-based compensation issued to employees and directors. SFAS 123R requires companies to estimate the fair value of share-based payment awards on the date of grant using an option-pricing model. The value of the portion of the award that is ultimately expected to vest is recognized as expense over the requisite service periods in the Company's consolidated statement of operations. The Company uses the straight-line method for recognizing compensation expense. An estimate for forfeitures is included in compensation expense for awards under SFAS 123R.

Results of Operations

The following table presents certain financial data as a percentage of total revenue for the periods indicated. Our historical operating results are not necessarily indicative of the results for any future period.

	Year ended December 31,			Nine Months Ended September 30,	
	2007	2006	2005	2008 (Unaudited)	2007
Revenue	100%	100%	100%	100%	100%
Cost of goods sold	72	139	273	60	71
Gross profit (loss)	28	(39)	(173)	40	29
Operating expenses:					
Research and development	17	54	107	12	18
Selling, general and administrative	38	109	169	36	40
Total operating expenses	55	163	276	48	58
Loss from operations	(27)	(202)	(449)	(8)	(29)
Other income (expense), net	(78)	15	8	(10)	(105)
Net loss	(105)%	(187)%	(441)%	(18)%	(134)%

The following table presents certain financial data for the periods indicated. Our historical operating results are not necessarily indicative of the results for any future period.

Three Months and Nine Months Ended September 30, 2008 Compared to Three Months and Nine Months Ended September 30, 2007

Revenues

Revenues for the three and nine months ended September 30, 2008 were approximately \$5.2 million and \$13.5 million, respectively, as compared to approximately \$5.1 million and \$12.9 million for the three and nine months ended September 30, 2007, respectively, an increase of approximately 2% and 5%, respectively. There was relatively no change in revenues for the three month period as compared to the same period of the prior year. The higher revenues of \$0.6 million for the nine month period as compared to the same period in the prior year was due to an increase in the contract revenues of \$1.4 million as a result of additional contracts the Company has obtained offset by a slight decrease in product revenue of \$0.8 million. The decrease in the product revenue was due to a production issue the Company experienced in the first quarter of 2008 which resulted in a shortage of displays. The Company has rectified the production issue and has seen improvement in its production volume and yield.

Cost of Goods Sold

Cost of goods sold includes direct and indirect costs associated with production. Cost of goods sold for the three and nine months ended September 30, 2008 were approximately \$2.8 million and \$8.1 million, respectively, as compared to approximately \$3.1 million and \$9.1 million, respectively, for the three and nine months ended September 30, 2007. For the three and nine month periods as compared to the same periods of the prior year there was a decrease of approximately \$0.3 million and \$1.0 million, respectively. The gross margin for the three and nine months ended September 30, 2008 was approximately \$2.4 million and \$5.4 million, respectively, as compared to approximately \$2.0 million and \$3.8 million, respectively, for the three and nine months ended September 30, 2007. As a percentage of revenue this translates to a gross margin for the three and nine months ended September 30, 2008 of 46% and 40%, respectively, as compared to 40% and 29%, respectively, for the three and nine months ended September 30, 2007. The increase in the gross margin was attributed to fuller utilization of our fixed production overhead due to higher unit production volume, improved yields, and a decrease in the third party billable R&D costs.

Operating Expenses

Research and Development. Research and development expenses include salaries, development materials and other costs specifically allocated to the development of new microdisplay products, OLED materials and subsystems. Research and development expenses for the three and nine months ended September 30, 2008 were approximately \$0.3 million and \$1.6 million, respectively, as compared to \$0.6 million and \$2.3 million for the three and nine months ended September 30, 2007, a decrease of approximately \$0.3 million and \$0.7 million, respectively. The decrease was due to the re-deployment of research and development personnel to production contract services which are included in cost of goods sold.

Selling, General and Administrative. Selling, general and administrative expenses consist principally of salaries, fees for professional services including legal fees, as well as other marketing and administrative expenses. Selling, general and administrative expenses for the three and nine months ended September 30, 2008 were approximately \$1.3 million and \$4.8 million, respectively, as compared to approximately \$1.4 million and \$5.2 million for the three and nine months ended September 30, 2007, a decrease of \$0.1 million and \$0.4 million, respectively. The decrease of approximately \$0.1 million for the three months ended September 30, 2008 was primarily related to a decrease in professional services offset by an increase in the reserve for allowance for bad debts. The decrease of approximately \$0.4 million for the nine months ended September 30, 2008 was primarily related to decreases in personnel costs and professional services offset by an increase in reserve for allowance for bad debts.

Other Income (Expense), net. Other income (expense), net consists primarily of interest income earned on investments, interest expense related to the secured debt, gain from the change in the derivative liability, and income from the licensing of intangible assets.

For the three and nine months ended September 30, 2008, interest income was approximately \$2 thousand and \$6 thousand as compared to approximately \$9 thousand and \$32 thousand for the three and nine months ended September 30, 2007. The decrease in interest income was primarily a result of lower interest rates on investments.

For the three and nine months ended September 30, 2008, interest expense was approximately \$0.5 million and \$1.7 million, respectively, as compared to approximately \$0.6 million and \$2.8 million, respectively, for the three and nine months ended September 30, 2007. The breakdown of the interest expense for the three and nine month period in 2008 is as follows: interest expense associated with debt of approximately \$178 thousand and \$501 thousand, respectively; the amortization of the deferred costs and waiver fees associated with the debt of approximately \$331 thousand and \$1.2 million, respectively; and the amortization of the debt discount associated with the debt of approximately \$0 and \$25 thousand, respectively. The breakdown of the interest expense for the three and nine month period in 2007 is as follows: interest expense associated with debt of approximately \$195 and \$652 thousand, respectively; the amortization of the deferred costs associated with the notes payable of approximately \$0 and \$265 thousand, respectively; and the amortization of the debt discount of approximately \$397 thousand and \$1.96 million, respectively.

The gain from the change in the derivative liability was \$0 for the three and nine months ended September 30, 2008 as compared to approximately \$1.5 million and \$0.9 million, respectively, for the three and nine months ended September 30, 2007 related to an extinguishment of debt.

Other income, net (excluding interest income), for the three and nine months ended September 30, 2008 was approximately \$82 thousand and \$288 thousand, respectively, as compared to approximately \$172 thousand and \$762 thousand, respectively, for the three and nine months ended September 30, 2007. Other income, net (excluding interest income) for the three and nine months ended September 30, 2008 consists of approximately \$18 thousand of income from equipment salvage; approximately \$142 thousand and \$396 thousand, respectively, of income from the licensing of intangible assets; and is offset by approximately \$60 thousand and \$126 thousand, respectively, of expense from registration payment arrangements.

Year Ended December 31, 2007 Compared to Year Ended December 31, 2006

Revenues

Revenues increased by approximately \$9.4 million to a total of approximately \$17.6 million for the year ended December 31, 2007 from approximately \$8.2 million for the year ended December 31, 2006, representing an increase of 115%. This increase was primarily due to increased microdisplay sales and increased availability of finished displays due to manufacturing improvements. Our contract revenue increased approximately \$1.2 million while our product revenue increased approximately \$8.2 million. Average price per unit for microdisplays was \$371 in 2007 and \$386 in 2006. Our current expectation is that revenue will continue to grow in 2008 if we successfully execute our business plan.

Cost of Goods Sold

Cost of goods sold includes direct and indirect costs associated with production of our products. Cost of goods sold for the years ended December 31, 2007 and 2006 was approximately \$12.6 million and \$11.4, respectively, an increase of \$1.3 million. The increase included an inventory write-off of approximately \$0.4 million and an increase in our warranty return reserve of approximately \$0.6 million, both related to a non-recurring production issue that occurred during the fourth quarter of 2007. The non-recurring production issue involved changing a production procedure without adequate testing prior to implementation. The Company has taken steps to ensure any procedural changes in the production process will be thoroughly tested prior to implementation.

Cost of goods sold as a percentage of revenues improved from 139% in 2006 to 72% in 2007. Cost of goods is comprised primarily of material and labor cost. The labor portion of cost of goods is mostly fixed. Increased volume results in a lower cost of goods sold percentage. The improvement in cost of goods sold in 2007 was due primarily to both a streamlining of the Company's workforce in mid-2006 that had a significant full year effect on the fixed portion of cost of goods sold in 2007 and the effect of the larger revenue increase.

The gross profit was approximately \$4.9 million for the year ended December 31, 2007 and the gross loss was approximately (\$3.2) million for the year ended December 31, 2006. The gross margin was 28% for the year ended December 31, 2007 as compared to the gross loss of (39%) for the year ended December 31, 2006. The gross margin improvement was attributed to fuller utilization of our fixed production overhead due to higher unit production volume.

Research and Development Expenses

Research and development expenses include salaries, development materials and other costs specifically allocated to the development of new microdisplay products, OLED materials and subsystems. Research and development expenses for the year ended December 31, 2007 were approximately \$2.9 million as compared to approximately \$4.4 million for the year ended December 31, 2006. The decrease was due to the re-deployment of research and development personnel to production contract services which are included in cost of goods sold.

Selling, General and Administrative Expenses

Selling, general and administrative expenses consist primarily of salaries and fees for professional services, legal fees incurred in connection with patent filings, SEC and related matters, as well as other marketing and administrative expenses. General and administrative expenses decreased by approximately \$2.3 million to a total of approximately \$6.6 million for the year ended December 31, 2007 from \$8.9 million for the year ended December 31, 2006. The

decrease was primarily related to a reduction of marketing, tradeshow and personnel costs.

Other (Expense) Income

Other (expense) income, net consists primarily of interest income earned on investments, interest expense related to the secured debt, loss from the change in the derivative liability, loss on the extinguishment of debt and other income from the licensing of intangible assets.

For the year ended December 31, 2007, interest expense was approximately \$3.1 million as compared to \$1.3 million for the year ended December 31, 2006. Interest expense for 2007 consisted of interest expense associated with debt of approximately \$744 thousand; the amortization of the deferred costs associated with debt of approximately \$418 thousand; and the amortization of the debt discount associated with the debt of approximately \$1.9 million. Interest expense for the year ended December 31, 2006 was comprised of interest associated with debt of approximately \$124 thousand; the amortization of the deferred costs associated with the notes payable of approximately \$221 thousand; and the amortization of the debt discount associated with the debt of approximately \$956 thousand.

For the year ended December 31, 2007, the change in the derivative liability was a loss of approximately \$853 thousand as compared to a gain of approximately \$2.4 million ended December 31, 2006.

The loss on extinguishment of debt was \$10.7 million for the year ended December 31, 2007 as compared to \$0 for the year ended December 31, 2006. See Note 8 to the financial statements: Debt for additional information.

Other income for the year ended December 31, 2007 was approximately \$815 thousand which consisted of interest income of approximately \$43 million, a gain on the license of intangible assets of \$869 thousand, offset by a write-off of a miscellaneous receivable of \$103 thousand, and other income of \$7 thousand as compared to \$91 thousand for the year ended December 31, 2006. See Note 12 to the December 31, 2007 consolidated financial statements: Commitments and Contingencies – Royalties for additional information.

Year Ended December 31, 2006 Compared to Year Ended December 31, 2005

Revenues

Revenues increased by approximately \$4.5 million to a total of approximately \$8.2 million for the year ended December 31, 2006 from approximately \$3.7 million for the year ended December 31, 2005, representing an increase of 118%. This increase was due to increased microdisplay demand and the broadening of our product revenue through the sales of the Z800 3D Visor. Our contract revenue increased approximately \$150 thousand while our product revenue increased approximately \$4.3 million. Average price per unit for microdisplays was \$386 in 2006 and \$372 in 2005.

Cost of Goods Sold

Cost of goods sold includes direct and indirect costs associated with production of our products. Cost of goods sold for the years ended December 31, 2006 and 2005 was approximately \$11.4 million and approximately \$10.2, respectively, an increase of \$1.2 million. The gross loss was approximately (\$3.2) million and approximately (\$6.5) million, respectively, for the years ended December 31, 2006 and 2005, respectively. The gross loss was (39%) for the year ended December 31, 2006 as compared to (173%) for the year ended December 31, 2005. The increase in cost of goods sold for the year ended December 31, 2006 was attributed to higher materials usage to support increased production as well as approximately \$343 thousand of stock compensation expense reflected in accordance with SFAS No. 123R in 2006. The decrease in gross loss was attributed to fuller utilization of our fixed production overhead due to higher unit volume.

Research and Development Expenses

Research and development expenses included salaries, development materials and other costs specifically allocated to the development of new microdisplay products, OLED materials and subsystems. Research and development expenses for the year ended December 31, 2006 were approximately \$4.4 million as compared to approximately \$4.0 million for the year ended December 31, 2005. The increase was primarily due to the stock-based compensation expense of approximately \$435 thousand in 2006.

Selling, General and Administrative Expenses

Selling, general and administrative expenses consist primarily of salaries and fees for professional services, legal fees incurred in connection with patent filings and related matters, as well as other marketing and administrative expenses. General and administrative expenses increased by approximately \$2.9 million to a total of approximately \$8.9 million for the year ended December 31, 2006 from \$6.3 million for the year ended December 31, 2005. The increase in selling, general and administrative expenses was due primarily to stock-based compensation expense of approximately \$2.9 million and an increase in marketing expenses related to our Z800 3D Visor.

Other Income (Expense)

Other income, net consists primarily of interest income earned on investments, interest expense related to the secured debentures, and gain from the change in the derivative liability. For the year ended December 31, 2006, interest income was approximately \$91 thousand as compared to approximately \$210 thousand for the year ended December 31, 2005. The decrease in interest income was primarily a result of lower cash balances available for investment. For the year ended December 31, 2006, interest expense was approximately \$1.3 million as compared to approximately \$4 thousand for the year ended December 31, 2005. The increase in the interest expense was a result of interest associated with our notes payable of approximately \$124 thousand, the amortization of the deferred costs associated

with the notes payable of approximately \$221 thousand, and the amortization of the debt discount of approximately \$956 thousand. For the year ended December 31, 2006, income from the change in the derivative liability was approximately \$2.4 million as compared to \$0 for the year ended December 31, 2005.

Liquidity and Capital Resources

As of September 30, 2008, we had approximately \$1.4 million of cash and investments as compared to \$0.8 million as of December 31, 2007. The change in cash and investments was primarily due to cash provided by financing activities of \$2.7 million offset by cash used for operating activities and investing activities of \$2.1 million.

Sources and Uses of Cash

	Year ended December 31,			Nine Months Ended	
	2007	2006	2005	September 30, 2008	2007
Cash flow data:				(unaudited)	
Net cash used in operating activities	\$ (1,943)	\$ (10,389)	\$ (15,713)	\$ (1,908)	\$ (1670)
Net cash provided (used) in investing activities	61	(257)	(1,072)	(236)	24
Net cash provided by financing activities	1,180	5,334	10,055	2,703	1,023
Net (decrease) increase in cash and cash equivalents	(702)	(5,312)	(6,730)	559	(623)
Cash and cash equivalents, beginning of period	1,415	6,727	13,457	713	1,415
Cash and cash equivalents, end of period	\$ 713	\$ 1,415	\$ 6,727	\$ 1,272	\$ 792

Cash Flows from Operating Activities

Cash flow used in operating activities during the nine months ended September 30, 2008 was approximately \$1.9 million primarily attributable to our net loss of approximately \$2.4 million and an increase in accounts receivable of \$1.9 million offset by non-cash expenses of \$2.5 million.

Cash used in operating activities was \$1.9 million in 2007, \$10.4 million in 2006 and \$15.7 million in 2005. For the year ended December 31, 2007, net cash used by operating activities was approximately \$1.9 million, primarily attributable to our \$18.5 million net loss offset by the non-cash expense components of loss on extinguishment of debt of \$10.7 million, stock based compensation of \$1.7 million, amortization of discount on notes payable of \$1.9 million, and issuance of common stock for services of \$1.3 million. For 2006, net cash used in operating activities was approximately \$10.4 million, primarily attributable to our net loss of approximately \$15.3 million. For 2005, net cash used by operating activities was approximately \$15.7 million, primarily attributable to our net loss of approximately \$16.5 million.

Cash Flows from Investing Activities

Cash used in investing activities during the nine months ended September 30, 2008 was approximately \$236 thousand used for equipment purchases.

Cash provided by investing activities was \$61 thousand in 2007 which was primarily related to the maturing of investments. Cash used in investing activities was \$257 thousand in 2006 and \$1.1 million in 2005 which were primarily related to capital expenditures.

Cash Flows from Financing Activities

Cash provided by financing activities during the nine months ended September 30, 2008 was approximately \$2.7 million and was comprised of approximately \$1.6 million from the sale of common stock, approximately \$1.8 million from the line of credit, net of debt financing costs and offset by payments on debt of approximately \$0.7 million

Cash provided by financing activities was \$1.2 million in 2007, \$5.3 million in 2006 and, \$10.1 million in 2005. Net cash provided by financing activities for the year ended December 31, 2007 was comprised primarily of approximately \$1.6 million in proceeds from debt issuance and offset by payments on long-term debt and capitalized lease obligations of approximately \$63 thousand and deferred financing costs of approximately \$368 thousand. Net cash provided by financing activities in 2006 was comprised primarily of approximately \$5.4 million in proceeds from debt issuance and offset by payments on long-term debt and capitalized lease obligations of approximately \$55 thousand. Net cash provided by financing activities during 2005 consisted primarily of approximately \$8.4 million in proceeds from the sale of common stock and approximately \$1.6 million from the exercise of stock options and warrants.

Working Capital and Capital Expenditure Needs

Our condensed consolidated financial statements as of September 30, 2008 have been prepared under the assumption that we will continue as a going concern. On December 22, 2008, the Company closed a \$4.033 million equity financing. The Company sold 4,033 shares of Series B Preferred Stock at a price of \$1,000 per share. The proceeds were used to pay off all remaining unconverted notes of the Company's approximately \$6 million in convertible notes and associated interest due. Prior to the closing of the financing, \$250,000 of the notes converted to Common Stock and \$1.7 million of the notes converted to Series B Preferred Stock.

These above transactions positively impact the Company's ability to continue as a going concern. The Company no longer has the approximately \$6 million convertible note debt nor the approximately \$480,000 of annual interest payments on the notes.

The Company believes if revenues continue at current or above current levels, it can now generate sufficient cash from operations to continue operations indefinitely. However, the Company does have capital improvements it would like to make over the next 12 months to increase its capacity which would require additional financing.

The Company's ability to obtain additional funding is impacted by its present Series B Preferred Stock. The Company's Series B Preferred Stock has covenants which the Company currently is in compliance with and the covenants contain certain restrictive components that materially limit our ability to raise additional secured debt, without consent of the majority of the Series B Stockholders, which is presently limited to a maximum of \$4.5 million. The Company has a line of credit with a maximum of \$3.0 million which is secured by accounts receivable and inventory. In addition, pursuant to the Series B Preferred Stock agreement, the Company cannot enter into a consolidation, merger, or acquisition under certain conditions without consent of the majority of the Series B Stockholders. The Company may raise additional unsecured debt under the Series B Preferred Stock covenants given certain restrictions. In addition, the Series B Preferred Stock allow for additional equity financing.

Contractual Obligations

The following chart describes the outstanding contractual obligations of eMagin as of January 5, 2009 (in thousands):

	Total	Payments due by period		
		1 Year	2-3 Years	4-5 Years
Operating lease obligations	\$ 579	\$ 579	\$ —	\$ —
Purchase obligations (a)	1,339	1,339	—	—
Other long-term liabilities (b)	681	181	250	250
Total	\$ 2,599	\$ 2,099	\$ 250	\$ 250

(a) The majority of purchase orders outstanding contain no cancellation fees except for minor re-stocking fees.

(b) This amount represents royalty payments and the New York Urban Development settlement.

Off-Balance Sheet Arrangements

We do not have any off balance sheet arrangements that are reasonably likely to have a current or future effect on our financial condition, revenues, results of operations, liquidity or capital expenditures.

Effect of Recently Issued Accounting Pronouncements

In September 2006, the FASB issued Statement of Financial Accounting Standards No. 157, "Fair Value Measurements," ("SFAS 157"), which defines fair value, establishes a framework for measuring fair value under generally accepted accounting principles and expands disclosures about fair value measurements. SFAS 157 does not require any new fair value measurements, but provides guidance on how to measure fair value by providing a fair value hierarchy used to classify the source of the information. In February 2008, the FASB issued FASB Staff Position No. FSP 157-2, "Effective Date of FASB Statement No. 157", which provides a one year deferral of the effective date of SFAS 157 for non-financial assets and non-financial liabilities, except those that are recognized or disclosed in the financial statements at fair value on a recurring basis. The Company adopted SFAS 157 as of January 1, 2008, with the exception of the application of the statement to non-recurring non-financial assets and non-financial liabilities which it will defer the adoption until January 1, 2009. The adoption of SFAS 157 did not have a material impact on the Company's consolidated results of operations, financial condition or cash flows. In October 2008, the FASB issued FASB Staff Position No. FSP 157-3, "Determining the Fair Value of a Financial Asset When the Market for That Asset Is Not Active" ("FSP 157-3"). FSP 157-3 clarified the application of SFAS 157 in situations where the market for that financial asset is not active. FSP 157-3 was effective upon issuance, including prior periods for which financial statements had not been issued. The adoption of SFAS 157 did not have a material impact on the Company's consolidated results of operations, financial condition or cash flows.

In February 2007, the FASB issued SFAS No. 159, “The Fair Value Option for Financial Assets and Financial Liabilities — including an amendment of FASB Statement No. 115,” (“SFAS 159”) which is effective for fiscal years beginning after November 15, 2007. This statement permits entities to choose to measure many financial instruments and certain other items at fair value. This statement also establishes presentation and disclosure requirements designed to facilitate comparisons between entities that choose different measurement attributes for similar types of assets and liabilities. Unrealized gains and losses on items for which the fair value option is elected would be reported in earnings. The Company has adopted SFAS 159 and has elected not to measure any additional financial instruments and other items at fair value and therefore the adoption of SFAS 159 did not have a material impact on the Company’s consolidated results of operations, financial condition or cash flows.

In March 2008, the FASB issued Statement of Financial Accounting Standards No. 161, Disclosures about Derivative Instruments and Hedging Activities, an amendment of FASB Statement No. 133 (“SFAS 161”). SFAS 161 requires entities to provide greater transparency about (a) how and why an entity uses derivative instruments, (b) how derivative instruments and related hedged items are accounted for under Statement 133 and its related interpretations and (c) how derivative instruments and related hedged items affect an entity’s financial position, results of operations, and cash flows. SFAS 161 is effective prospectively for financial statements issued for fiscal years and interim periods beginning after November 15, 2008, with early application permitted. The Company is currently evaluating the disclosure implications of this statement.

In May 2008, the FASB issued SFAS No. 162, The Hierarchy of Generally Accepted Accounting Principles, (“SFAS 162”), which identifies the sources of accounting principles and the framework for selecting principles to be used in the preparation of financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles in the United States. This statement shall be effective 60 days following the SEC's approval of the Public Company Accounting Oversight Board's amendments to AU section 411, The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles. The Company is currently evaluating the impact of SFAS 162, but does not expect the adoption of this pronouncement will have a material impact on the Company's financial statements.

Quantitative and Qualitative Disclosures About Market Risk

Market Rate Risk. We are exposed to market risk related to changes in interest rates and foreign currency exchanges rates.

Interest Rate Risk. We hold our assets in cash and cash equivalents. We do not hold derivative financial instruments other than a derivative liability on our balance sheet or equity securities. We are exposed to interest rate risk on our line of credit. Annual interest on our line of credit is equal to the greater of the sum of the prime rate plus 2% or 10%.

Foreign Currency Exchange Rate Risk. Our revenue and expenses are denominated in U.S. dollars. We have conducted some transactions in foreign currencies and expect to continue to do so; we do not anticipate that foreign exchange gains or losses will be significant. We have not engaged in foreign currency hedging to date.

Our international business is subject to risks typical of international activity, including, but not limited to, differing economic conditions; change in political climates; differing tax structures; and other regulations and restrictions. Accordingly, our future results could be impacted by changes in these or other factors.

BUSINESS

Recent Developments

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on December 23, 2008, pursuant to a Securities Purchase Agreement (the “Securities Purchase Agreement”) entered into on December 18, 2008 between the Company and Stillwater on December 22, 2008 (the “Closing”), the Company sold Stillwater for an aggregate purchase price of \$4,033,000 an aggregate of 4,033 shares of its Series B Convertible Preferred Stock (the “Preferred Stock”), which have a stated value of \$1,000 per share, a conversion price of \$0.75 per share and have the rights and preferences set forth in the Certificate of Designations of Series B Convertible Preferred Stock filed with the Secretary of State for the State of Delaware on December 19, 2008 (the “Certificate of Designations”), and warrants to purchase 1,875,467 shares of common stock at \$1.03 per share (the “Warrants”). The Warrants terminate on December 22, 2013.

Pursuant to the terms of the Securities Purchase Agreement, the Company used the proceeds from the sale of the Preferred Stock exclusively to repay \$4,033,000 of its Amended and Restated 8% Senior Secured Convertible Notes (the "Notes") which matured on December 22, 2008.

Pursuant to the Securities Purchase Agreement, the members of the Company's board of directors, and certain executive officers executed lockup agreements pursuant to which, subject to the terms of the lockup agreement, they are restricted from selling the Company's stock that they beneficially own for 180 days from the Closing.

On December 22, 2008, the Company entered into an Exchange Agreement (the "Exchange Agreement") with three holders ("Holders") of its outstanding Notes. Pursuant to the Exchange Agreement, on December 22, 2008, the Holders exchanged \$1,700,000 of their outstanding Notes and accrued and unpaid interest thereon and received 1,706 shares of the Preferred Stock (the amount of the outstanding principal and accrued and unpaid interest due on the Notes exchanged divided by \$1,000).

Pursuant to the Securities Purchase Agreement, the Company filed the Certificate of Designations with the State of Delaware on December 19, 2008. The Certificate of Designations designates 10,000 shares of its preferred stock as Series B Convertible Preferred Stock ("the Preferred Stock"). The Preferred Stock has a stated value of \$1,000 and has a conversion price of \$0.75 per share. The Preferred Stock does not pay interest. The holders of the Preferred Stock are not entitled to receive dividends unless the Company's Board of Directors declared a dividend for holders of its common stock and then the dividend shall be equal to the amount that such holder would have been entitled to receive if the holder converted its Preferred Stock into shares of its common stock. Each share of Preferred Stock has voting rights equal to (i) the number of shares of its common stock issuable upon conversion of such shares of Preferred Stock at such time (determined without regard to the shares of common stock so issuable upon such conversion in respect of accrued and unpaid dividends on such share of Preferred Stock) when the Preferred Stock votes together with its common stock or any other class or series of its stock and (ii) one vote per share of Preferred Stock when such vote is not covered by the immediately preceding clause. The Company may at its option redeem the Preferred Stock by providing the required notice to the holders of the Preferred Stock and paying an amount equal to \$1,000 multiplied by the number of shares for all of such holder's shares of outstanding Preferred Stock to be redeemed.

The Company also entered into a Registration Rights Agreement with Stillwater to register for resale the shares of the common stock issuable upon conversion of the Preferred Stock sold in the offering and the shares of common stock issuable upon exercise of the warrants. Subject to the terms of the Registration Rights Agreement, the Company is required to file a registration statement (the "Registration Statement") on Form S-1 with the Securities and Exchange Commission (the "SEC") within 30 days following the date that the Company is permitted to file a registration statement by (i) the rules and regulations of the Securities and Exchange Commission and (ii) the agreements set forth on Schedule B to the Registration Rights Agreement, which as of December 18, 2008 prohibits the Company from filing the initial Registration Statement until certain other registration statements are filed. After filing the Registration Statement, the Company is to cause such Registration Statement to be declared effective under the Securities Act of 1933 (the "Act") as promptly as possible after the filing thereof, but in no event later than 90 days after the filing date (or no later than 120 days after the filing date in the event of SEC "full review" of the Registration Statement). The Holders of Notes that exchanged their Notes pursuant to the Exchange Agreement received the same registration rights as Stillwater.

Pursuant to the Securities Purchase Agreement, the Company claims an exemption from the registration requirements of the Act for the private placement of these securities pursuant to Section 4(2) of the Securities Act of 1933, as amended (the "Act") and/or Regulation D promulgated thereunder since, among other things, the transaction did not involve a public offering, the investors were accredited investors and/or qualified institutional buyers, the investors had access to information about the Company and their investment, the investors took the securities for investment and not resale, and the Company took appropriate measures to restrict the transfer of the securities.

Amendment of Stillwater Note Purchase Agreement - April 2007

As stated above, as previously reported in the Form 8-K dated July 25, 2006, on July 21, 2006, eMagin Corporation (the "Company") entered into a Note Purchase Agreement (the "Stillwater Agreement") with Stillwater LLC ("Stillwater") which provides for the purchase and sale of a 6% senior secured convertible note in the principal amount of up to \$500,000 (the "Stillwater Note"), together with a warrant (the "Stillwater Warrant") to purchase 70% of the number of shares issuable upon conversion of the Stillwater Note, at the sole discretion of the Company by delivery of a notice to Stillwater on December 14, 2006. Interest payments from the Stillwater Note are to be made in cash, unless Stillwater elects to convert any portion of the principal of the Stillwater Note plus any accrued and unpaid interest for such principal amount.

As previously reported in the Form 8-K dated April 13, 2007, by way of amendment to the Stillwater Agreement, dated March 28, 2007 (the "Amendment"), the Company and Stillwater agreed to certain amendments to the Stillwater Agreement. Based upon the provisions of the Stillwater Agreement, Stillwater was bound to purchase the Stillwater Note and the Stillwater Warrant so long as the conditions to closing as set forth in the Stillwater Agreement were satisfied by the Company. However, prior to Stillwater's obligation to purchase the Stillwater Note and Stillwater Warrant, the Company received notice from the American Stock Exchange ("AMEX") that it was no longer in compliance with their listing requirements, and the Company was subsequently de-listed in March of 2007. Since compliance with the AMEX listing requirements was a condition of closing in the Stillwater Agreement, Stillwater was no longer obligated to purchase the Stillwater Note and Stillwater Warrant. Therefore, among other things, pursuant to the Amendment, the parties agreed to a new conversion price for the Stillwater Note of \$0.35 per share, a new exercise price for the Stillwater Warrant of \$0.48 per share, a new closing date, and amended certain closing conditions, including the following: on the closing date, (i) trading in securities on the New York Stock Exchange, Inc., the AMEX, Nasdaq, the Nasdaq Capital Market, the Over-The-Counter Bulletin Board, the Pink Sheets, LLC or any similar organization shall not have been suspended or materially limited, (ii) a general moratorium on commercial banking activities in the State of New York shall not have been declared by either federal or state authorities, and (iii) the Company has obtained waivers from all the note holders of the other notes or has executed an additional Allonge with the majority holders to amend Section 3.2 of the Note and other notes to provide that the Company maintain cash and cash equivalents balances of at least equal to \$200,000 from April 1, 2007 through and including May 15, 2007 and that subsequent to May 15, 2007 the Company maintain cash and cash equivalents balances of at least equal to \$600,000.

If the entire Stillwater Warrant is exercised for cash, the Company would receive \$480,000, which would be used for working capital and other corporate purposes. There cannot be any assurances that any of the Stillwater Warrant will be exercised. The closing for the sale of the Stillwater Note and Stillwater Warrant was completed on April 9, 2007 and the Company issued Stillwater the Stillwater Note in a 6% Senior Secured Convertible Note in the principal amount of \$500,000 and the Stillwater Warrant to purchase 1,000,000 shares of the Company's common stock at an exercise price of \$0.48 in accordance with the terms of the Stillwater Agreement and Amendment. Interest payments from the Stillwater Note are to be made in cash, unless Stillwater elects to convert any portion of the principal of the Stillwater Note plus any accrued and unpaid interest for such principal amount pursuant to the terms of the Stillwater Note. The principal of the Stillwater Note was due in installments as follows:

Principal Amount	Due Date*
\$ 250,000	July 23, 2007**

\$ 250,000	January 21, 2008 ***
------------	----------------------

* If the due date falls on a non-business day, the due date will be the next business day.

** As disclosed above, on July, 23 2007, Stillwater elected to convert \$252,166.50 of the Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note due on July 23, 2007 and \$2,166.50 of accrued and unpaid interest into shares of common stock. Stillwater received 720,476 shares of the common stock at the conversion price of \$0.35 pursuant to the terms of the Stillwater Note.

*** As disclosed above, on December 22, 2008 Stillwater elected to convert \$251,166.67 of the remaining Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note originally due on January 21, 2008 and extended to December 22, 2008 (as discussed below) and \$1,116.67 of accrued and unpaid interest into shares of common stock. Stillwater received 717,620 shares of common stock at a conversion price of \$0.35 pursuant to the terms of the Stillwater Note.

This prospectus covers the resale by Stillwater of the above-referenced common stock underlying the Stillwater Note and the Stillwater Warrant.

Amendment Agreements - July 2007

As previously reported in the Form 8-K of the Company dated as of July 25, 2006, the Company entered into several Note Purchase Agreements (the "Original Purchase Agreements"), including the Stillwater Agreement, to sell to certain qualified institutional buyers and accredited investors \$5,990,000 in principal amount 6% Senior Secured Convertible Notes Due July 21, 2007 and January 21, 2008 (the "Notes"), together with warrants (the "Warrants") to purchase 1,612,700 shares of the Company's common stock, par value \$0.001 per share at \$3.60 per share.

As previously reported in the Form 8-K of the Company dated as of July 25, 2007, by way of Amendment Agreements dated July 23, 2007 (the "Amendment Agreements") between the Company and each of the holders of the Notes, including Stillwater (each a "Holder" and collectively, the "Holders"), the Company agreed to issue each Holder an amended and restated Note for the outstanding Notes (the "Amended Notes") in the principal amount equal to the principal amount outstanding as of July 23, 2007 and an amended restated Warrant (the "Amended Warrants"). As part of the Amendment Agreements, the maturity date for the Amended Notes was extended to December 22, 2008. The outstanding principal and accrued and unpaid interest of Amended Notes were repaid on December 22, 2008 except

for those three Holders that elected to exchange their Amended Notes into Preferred Stock pursuant to the Exchange Agreement (as disclosed above). The changes to the Amended Warrants include the following:

- Except for the Stillwater Warrant whose exercise price was unchanged,, the Amendment Agreements adjusted the exercise price of the Amended Warrants from \$3.60 to \$1.03 per share for 1,553,468 shares of common stock and requires the issuance of Warrants exercisable for an additional 3,831,859 shares of common stock at \$1.03 per share with an expiration date of July 21, 2011; and
- The Amended Warrants are subject to certain anti-dilution adjustment rights in the event the Company issues shares of its common stock or securities convertible into its common stock at a price per share that is less than the Strike Price, in which case the Strike Price shall be adjusted to the lower of (1) 138% of the price at which such common stock is issued or issuable and (2) the exercise price of warrants, issued in such transaction.

Pursuant to the Amendment Agreements, the Company filed a Certificate of Designations of Series A Senior Secured Convertible Preferred Stock (the "Certificate of Designations"). The Certificate of Designations designates 3,198 shares of the Company's preferred stock as Series A Senior Secured Convertible Preferred Stock (the "Preferred Stock"). Each share of the Preferred Stock has a stated value of \$1,000. The Preferred Stock is entitled to cumulative dividends which accrue at a rate of 8% per annum, payable on December 21, 2008. Each share of Preferred Stock has voting rights equal to (1) in any case in which the Preferred Stock votes together with the Company's common stock or any other class or series of stock of the Company, the number of shares of common stock issuable upon conversion of such shares of Preferred Stock at such time (determined without regard to the shares of common stock so issuable upon such conversion in respect of accrued and unpaid dividends on such share of Preferred Stock) and (2) in any case not covered by the immediately preceding clause one vote per share of Preferred Stock. The Certificate of Designations prohibits the Company from entering into a Fundamental Change without consent of the Holders and contains antidilution adjustments rights that are comparable to the antidilution adjustments contained in the Amended Notes. Pursuant to the Certificate of Designations, the Company was to redeem any shares of its outstanding shares of Series A Senior Secured Convertible Preferred Stock that were outstanding shares on December 21, 2008, however, no such shares were issued or outstanding on December 21, 2008 .

Pursuant to the Amendment Agreements, the Company was required to file a registration statement with the Securities and Exchange Commission by August 31, 2007 covering the resale of 100% of the sum of (a) the number of shares issuable upon conversion of the Amended Notes and Preferred Stock, and (b) the number of shares issuable upon exercise of the Warrants.

The summary of amendment terms contained herein does not include all information included in the Amendment Agreement, the Amended Notes, the Amended Warrants, the Certificate of Designations or the Ancillary Agreements and, consequently, is qualified in its entirety by reference to the entire text of the Amendment Agreements and the forms of the Amended Notes, Amended Warrants, Certificate of Designations, Amendment No. 1 to Pledge and Security Agreement, Amendment No. 1 to Patent and Trademark Security Agreement and Amendment No. 1 to Lockbox Agreement.

Securities Purchase Agreement – April 2008

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on April 4, 2008, the Company entered into a Securities Purchase Agreement on April 2, 2008, (the "Purchase Agreement") pursuant to which it sold to certain qualified institutional buyers and accredited investors (the "Investors") an aggregate of 1,586,539 shares of the Company's common stock, par value \$0.001 per share (the "Shares"), and warrants to purchase an additional 793,273 shares of common stock, for an aggregate purchase price of \$1,650,000. The purchase price of the common stock was \$1.04 per share and the strike price of the corresponding warrant was \$1.30 per share. The warrants expire April 2, 2013.

The Company entered into a Registration Rights Agreement with the Investors to register the resale of the Shares sold in the offering and the shares of common stock issuable upon exercise of the warrants. Subject to the terms of the Registration Rights Agreement, the Company was required to file a registration statement on Form S-1 with the Securities and Exchange Commission (the "SEC") within 45 days of the closing, to use its best efforts to cause the registration statement to be declared effective under the Securities Act of 1933 (the "Act") as promptly as possible after the filing thereof, but in no event later than 90 days after the filing date and no later than 120 days after the filing date in the event of SEC review of the registration statement. The Company filed the registration statement within the 45 day period however the Company was notified that the registration statement was under review by the SEC. The Company failed to file the amended registration statement by August 2, 2008 which was the 120th day from the signing of the Purchase Agreement and therefore the registration statement is not effective.

As the registration statement is not effective within the grace periods (“Event Date”), the Company must pay partial liquidated damages (“damages”) in cash to each Investor equal to 2% of the aggregate purchase price paid by each Investor under the Purchase Agreement on the Event Date and each monthly anniversary of the Event Date (or on a pro-rata basis for any portion of a month) until the registration statement is effective. The Company is not liable for any damages with respect to the warrants or warrant shares. The maximum damages payable to each Investor is 36% of the aggregate purchase price. If the Company fails to pay the damages to the Investors within 7 days after the date payable, the Company must pay interest at a rate of 15% per annum to each Investor which accrues daily from the date payable until damages are paid in full. The Company estimated \$399 thousand to be the maximum potential damages that the Company may be required to pay the Investors if the registration statement is not effective within three years of the signing of the agreement. The Company estimated \$186 thousand to be a reasonable estimate of the potential damages that may be due to the Investors based on the anticipated filing date.

The Company claims an exemption from the registration requirements of the Act for the private placement of these securities pursuant to Section 4(2) of the Act and/or Regulation D promulgated thereunder since, among other things, the transaction did not involve a public offering, the investors were accredited investors and/or qualified institutional buyers, the investors had access to information about the company and their investment, the investors took the securities for investment and not resale, and the Company took appropriate measures to restrict the transfer of the securities.

Moriah Capital Loan Agreement and Amendments

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on August 10, 2007, the Company and Moriah Capital LP (“Moriah”) entered into a Loan and Security Agreement, dated as of August 7, 2007 (the “Loan and Security Agreement”), which was amended as of January 30, 2008 by Amendment No. 1 and on March 18, 2008 by Amendment No. 2 (collectively, the “Original Agreement”).

As previously reported on a Form 8-K that was filed with the Securities and Exchange Commission on August 26, 2008, the Company and Moriah entered into Amendment No. 3 to the Loan and Security Agreement dated August 20, 2008 (the “Amendment No. 3”). Pursuant to Amendment No. 3, the Company issued Moriah an Amended and Restated Convertible Revolving Loan Note (the “Amended Note”). The maturity date of the Amended Note has been extended to August 7, 2009 and the maximum amount that the Company can borrow pursuant to the Amended Note was increased to \$3,000,000. The maturity date of the original revolving loan note had previously been extended to August 20, 2008.

Pursuant to Amendment No. 3, the Company issued Moriah a warrant, which terminates on August 7, 2013, to purchase up to 370,000 shares of the Company’s common stock at an exercise price of \$1.30 per share. In connection with Amendment No 3, the Company paid Moriah \$85,000 in fees. As previously reported, pursuant to Original Agreement, the Company issued Moriah warrants to purchase up to 1,000,000 shares of the Company’s common stock at an exercise price of \$1.50 per share.

Pursuant to Amendment No. 3, the Company and Moriah entered into an Amended and Restated Securities Issuance agreement (the “Amended and Restated Securities Issuance Agreement”). In connection with a Securities Issuance Agreement, dated as of August 7, 2007 (the “Original Securities Issuance Agreement”), the Company issued Moriah 162,500 shares of the Company’s common stock (the “2007 Shares”). Pursuant to the Amended and Restated Securities Issuance Agreement, Moriah agreed to waive the Company’s obligation to buy back the 2007 Shares with respect to 125,000 of such shares and to defer the Company’s obligation to buy back 37,500 of such 2007 Shares (collectively, the “Put Waiver”). Pursuant to the Amended and Restated Securities Agreement, the Company is issuing Moriah 485,000 shares of its Common Stock (of which 125,000 shares were issued in consideration for the Put Waiver from Moriah and 360,000 shares were issued in lieu of the issuance to Moriah of the Contingent Issued Shares (as described

in the Original Securities Issuance Agreement)). Additionally, pursuant to the Amended and Restated Securities Issuance Agreement, the Company has also granted Moriah a put option pursuant to which Moriah can sell to the Company 162,500 shares of its common stock issued under the Amended and Restated Securities Agreement for \$195,000, pro-rated for any portion thereof (the "2007 Put Price"). The 2007 Put Option shall automatically be deemed exercised by Moriah unless Moriah delivers written notice to the Company at any time between July 1, 2009 and August 1, 2009 that it does not wish to exercise the 2007 Put Option. The Company also granted Moriah a second put option pursuant to which Moriah can sell 360,000 of the shares issued to Moriah pursuant to the Amended and Restated Securities Purchase Agreement to the Company for \$234,000 (the "2008 Put Option"). The 2008 Put Option shall automatically be deemed exercised by Moriah unless Moriah delivers written notice to the Company at any time between July 1, 2009 and August 1, 2009 that Moriah does not wish to exercise the 2008 Put option in whole or in part.

Pursuant to Amendment No. 3, the Company and Moriah entered into an Amendment to Registration Rights Agreement (the "Amended Registration Rights Agreement"). Pursuant to the Amended Registration Rights Agreement, the Company agreed to use its best efforts to file a registration statement to register the 485,000 shares of the Company's common stock issued pursuant to the Amended and Restated Securities Issuance Agreement and the shares of common stock issuable upon exercise of the Warrant, provided that the Company is permitted under applicable securities rules and regulations and after the certain other registration statements that the Company was obligated to file on behalf of selling shareholders have been declared effective.

On August 19, 2008, the Holders of the Amended Notes and the Investors in the Purchase Agreement consented to the Company's execution of the Amended Note, Amendment No. 3, Amended and Restated Securities Issuance Agreement, and the Amended Registration Rights Agreement. In consideration for the consent, a total of 144,000 shares of common stock were issued to the Holders and Investors based on individual participation in the Amended Notes and Securities Purchase Agreement on September 4, 2008.

The Company claims an exemption from the registration requirements of the Securities Act of 1933, amended (the "Act") for the private placement of the above-referenced securities pursuant to Section 4(2) of the Act since, among other things, these transactions did not involve a public offering and the Company took appropriate measures to restrict the transfer of the securities.

The foregoing description of Amendment No. 3 to the Loan and Security Agreement, the Amended and Restated Revolving Loan Note, the Amended and Restated Securities Issuance Agreement, and the Amendment to the Registration Rights Agreement does not purport to be complete and is qualified in its entirety by reference to the entire text of the agreements.

General

eMagin Corporation designs, develops, manufactures, and markets virtual imaging products which utilize OLEDs, or organic light emitting diodes, OLED-on-silicon microdisplays and related information technology solutions. We integrate OLED technology with silicon chips to produce high-resolution microdisplays smaller than one-inch diagonally which, when viewed through a magnifier, create virtual images that appear comparable in size to that of a computer monitor or a large-screen television. Our products enable our original equipment manufacturer, or OEM, customers to develop and market improved or new electronic products. We believe that virtual imaging will become an important way for increasingly mobile people to have quick access to high resolution data, work, and experience new more immersive forms of communications and entertainment.

Our first commercial product, the SVGA+ (Super Video Graphics Array of 800x600 picture elements plus 52 added columns of data) OLED microdisplay was initially offered for sampling in 2001, and our first SVGA-3D (Super Video Graphics Array plus built-in stereovision capability) OLED microdisplay was shipped in early 2002. These products have received award recognition including: SID Display of the Year and Electronic Products Magazine Product of the Year. These products are being applied or considered for near-eye and headset applications in products such as entertainment and gaming headsets, handheld Internet and telecommunication appliances, viewfinders, and wearable computers to be manufactured by OEM customers for military, medical, industrial, and consumer applications. We market our products globally.

In 2006 we introduced our OLED-XL technology, which provides longer luminance half life and enhanced efficiency of eMagin's SVGA+ and SVGA-3D product lines. We are in the process of completing development of 2 additional OLED microdisplays, namely the SVGA 3DS (SVGA 3D shrink, a smaller format SVGA display with a new cell architecture with embedded features) and an SXGA (1280 x 1024 picture elements).

In January 2005 we announced the world's first personal display system to combine OLED technology with head-tracking and 3D stereovision, the Z800 3DVisor(tm), which was first shipped in mid-2005. This product was recognized as a Digital Living Class of 2005 Innovators, and received the Consumer Electronics Association's coveted Consumer Electronics Show (CES) 2006 Best of Innovation Awards for the entire display category as well as a Design and Innovations Award for the electronic gaming category. In February 2007 the Z800 3DVisor, as integrated in Chatten Associates' head-aimed remote viewer, was recognized as one of Advanced Imaging's Solutions of the Year.

We believe that our OLED-on-silicon microdisplays offer a number of advantages over current liquid crystal microdisplays, including greatly increased system level power efficiency, less weight and wider viewing angles. Using our active matrix OLED technology, many computer and video electronic system functions can be built directly into the OLED-on-silicon microdisplay, resulting in compact systems with expected lower overall system costs relative to alternative microdisplay technologies. We have developed our own technology to create high performance OLED-on-silicon microdisplays and related optical systems and we have licensed certain fundamental OLED and

display technology from Eastman Kodak.

As the first to exploit OLED technology for microdisplays, and with the support of our partners and the development of our intellectual property, we believe that we enjoy a significant advantage in the commercialization of this display technology for virtual imaging. We believe we are the only company to sell full-color active matrix small molecule OLED-on-silicon microdisplays.

eMagin Corporation was created through the merger of Fashion Dynamics Corporation ("FDC"), which was organized on January 23, 1996 under the laws of the State of Nevada and FED Corporation ("FED"), a developer and manufacturer of optical systems and microdisplays for use in the electronics industry. FDC had no active business operations other than to acquire an interest in a business. On March 16, 2000, FDC acquired FED. Simultaneous with this merger, we changed our name to eMagin Corporation. Following the merger, the business conducted by eMagin is the business conducted by FED prior to the merger.

Our website is located at www.emagin.com and our e-commerce site is www.3dvisor.com. We make available on our website, free of charge, our annual report on Forms 10-K, our proxy statement, our quarterly reports on Forms 10Q, our current reports on Form 8K, and all amendments to such reports filed under the Securities and Exchange Act, earnings press releases, and other business-related press releases. We also post on our website the charters of our Audit, Compensation, Governance and Nominating committees, our Codes of Ethics and any amendments of or waiver to those codes of ethics, and other corporate governance materials recommended by the Securities and Exchange Commission as they occur.

Industry Overview

A study by NanoMarkets (February 2007) predicts the overall OLED market will approach \$10.9 billion in 2010 and grow to \$15.5 billion by 2014. These markets include various sizes devices for a range of applications from cell phone size to viewfinder displays to televisions to lighting. Displays in general are sold as independent products (such as TV monitors) or as components of other systems (such as laptop computers). Our products target one segment of the display industry, the near-eye, personal display, which is viewed through a lens rather than directly, in comparison to desktop computer screens which are known as direct view displays. As an off-shoot of our work in microdisplays, we are also participating in government-funded development studies for OLED-based lighting.

Personal displays, that is, near-eye systems based on microdisplays and optics, include video headsets, camcorders, viewfinders and other portable devices. Microdisplays are typically of such high resolution that they can be practically viewed only with magnifying optics. Although microdisplays are typically physically smaller than a postage stamp, they can provide a magnified viewing area similar to that of a full-size computer screen. For example, when magnified through a lens, a high-resolution 0.6-inch diagonal display can appear comparable to a 19- to 21-inch computer screen at about 2 feet from the viewer or a 60-inch TV screen at about 6 feet. The wearable display market, according to DisplaySearch, is expected to grow to at least \$153 million in 2010. McLaughlin Consulting, in a report published December 2006, projects that, with effective marketing, the Personal Viewer market could reach nearly \$1 billion in 2010.

We believe that the most significant driver of the longer term near-eye virtual imaging microdisplay market is growing consumer demand for mobile access to larger volumes of information and entertainment in smaller packages. This desire for mobility has resulted in the development of near-eye microdisplay products in two general categories: (i) an established market for electronic viewers incorporated in products such as viewfinders for digital cameras and video cameras which may potentially also be developed as personal viewers for cell phones and (ii) an emerging market for headset-application platforms which include accessories for mobile devices such as notebook and sub-notebook computers, portable DVD systems, electronic games, and other entertainment, and wearable computers.

Until now, near-eye virtual imaging microdisplay technologies have not simultaneously met all of the requirements for high resolution, full color, low power consumption, brightness, lifetime, size and cost which are required for successful commercialization in OEM consumer products. We believe that our new OLED-on-silicon microdisplay product line meets these requirements better than alternative products and will help to enable virtual imaging to emerge as an important display industry segment.

Our Approach: OLED-on-Silicon Microdisplays and Optics

There are two basic classes of organic light emitting diode, or OLED, technology, dubbed single molecule or small molecule (monomer) and polymer. Our microdisplays are currently based upon active matrix molecular OLED technology, which we call OLED-on-silicon because we build the displays directly on silicon chips. Our OLED-on-silicon technology uniquely permits millions of individual low-voltage light sources to be built on low-cost, silicon computer chips to produce single color, white or full-color display arrays. OLED-on-silicon microdisplays offer a number of advantages over current liquid crystal microdisplays, including increased brightness, lower power requirements, less weight and wider viewing angles. Using our OLED technology, many computer and video electronic system functions can be built directly into the silicon chip, under the OLED film, resulting in very compact, integrated systems with lowered overall system costs relative to alternative technologies.

We have developed our own proprietary and patented technology to create high performance OLED-on-silicon microdisplays and related optical systems, and we license fundamental OLED technology from Eastman Kodak. (See "Intellectual Property" and "Strategic Relationships"). We expect that the integration of our OLED-on-silicon

microdisplays into mobile electronic products will result in lower overall system costs to our OEM customers.

We believe that our OLED-on-silicon microdisplays will initiate a new generation of virtual imaging products that could have a profound impact on many industries. Headsets providing virtual screens surrounding the user in a sphere of data become a practical reality with our displays and a low cost head tracker. Because our microdisplays generate and emit light, they have a wider viewing angle than competing liquid crystal microdisplays, and because they have the same high brightness at all forward viewing angles, our microdisplays permit a large field-of-view and superior optical image.

The wider viewing angle of our display results in the following superior optical characteristics in comparison with LCDs and other near-eye display technologies:

- the user does not need to accurately position the head-wearable display to the eye;
- the image will change minimally with eye movement and appear more natural; and
- the display can be placed further from the eye and not cut off part of the image.

In addition, our OLED-on-silicon microdisplays offer faster response times and use much less power than competitive liquid crystal microdisplay systems. Our subsystem-level power consumption is so low that two SVGA, full color, full speed motion video computer displays can easily be run in stereovision off the power from a single USB port on a portable computer. Battery life is extended and weight is greatly reduced in systems using our products.

Our SVGA+ OLED microdisplay stores all the color and luminance value information at each of the more than 1.5 million picture elements, or pixels, between refresh cycles in the display array, eliminating the flicker or color breakup seen by most other high-resolution microdisplay technologies. Even power efficient frame rates as low as 30 Hz can usually be used effectively. Power consumption at the system level is expected to be the lowest of any full-color, full-video SVGA resolution range, large view microdisplay on the market. The OLED's ability to emit light at wide angles allows customers to create large field of view (approx. 40 degrees), wide image capture range images from very compact, low-cost, one-piece optical systems. The display contains the majority of the electronics required for connection to the RGB (red, green, blue signal) port of a portable computer imbedded in its silicon chip backplane, thereby eliminating many other components required by other display technologies such as digital-analog converters, application-specific integrated circuits (ASICs), light sources, multiple optical elements, and other components. We believe that these features will enable our new class of microdisplay to potentially be the most compact, highest image quality, and lowest cost solution for high resolution near-eye applications, once they are in full production.

We have also developed advanced lens technology which permits our OLED-on-silicon microdisplays to provide large field of view images that can be viewed for extended periods with reduced eye-fatigue. Molded plastic prism lenses have been developed to help our OEM customers obtain better quality, large area virtual images using our displays at relatively low cost in comparison to alternate approaches.

Our Products

Our first commercial microdisplay products are based on our "SVGA series" OLED microdisplays. We offer products utilizing both our proprietary "OLED" or "OLED-XL" technologies, applied to the same integrated circuit base. We offer our products to OEMs and other large volume buyers as both separate components, integrated bundles coupled with our own optics, or full systems. We also offer engineering support to enable customers to quickly integrate our products into their own product development programs.

(1) OLED Microdisplay Component Products

SVGA+ OLED Microdisplay (Super Video Graphics Array of 800x600 plus 52 added columns of data). Our 0.62 inch diagonal SVGA+ OLED microdisplays have a resolution of 852x600 triad pixels (1.53 million picture elements). The product was dubbed "SVGA+" because it has 52 more display columns than a standard SVGA display, permitting users to run either (1) standard SVGA (800 x 600 pixels) to interface to the analog output of many portable computers or (2) 852 x 480, using all the data available from a DVD player in a 16:9 wide screen entertainment format. The display also has an internal NTSC monochrome video decoder for low power night vision systems.

SVGA-3D OLED Microdisplay (Super Video Graphics Array plus built-in stereovision capability). Our 0.59 inch diagonal SVGA-3D OLED microdisplays have a resolution of 800x600 triad pixels (1.44 million picture elements). A built-in circuit provides compatibility with single channel frame sequential stereoscopic vision without additional external components.

Microdisplays Under Development. We are developing two additional display products, a smaller format (SVGA-3DS) version of our SVGA display, which will have 800 x 600 triad pixels and be 0.44 inch diagonal and a 0.77 inch SXGA OLED microdisplay with resolution of 1280x 1024 triad pixels. These new products offer both analog and digital signal inputs in a compact display with greater power efficiency. With the world's finest pitch (11.1 microns) and a high level of integrated functionality, the SVGA-3DS provides a simple path to system integration in a small format. The SXGA split chip architecture offers unprecedented power consumption savings for this display format in addition to a highly flexible system interface configuration.

Lens and Design Reference Kits. We offer a WF05 prism optic, with mounting brackets or combined with OLED microdisplays to form an optic-display module. We provide Design Reference Kits, which include a microdisplay and associated electronics to help OEMs evaluate our microdisplay products and to assist their efforts to build and test new products incorporating our microdisplays.

Integrated Modules. We provide near-eye virtual imaging modules that incorporate our OLED-on-silicon microdisplays with our lenses and electronic interfaces for integration into OEM products. We have shipped customized modules to several customers, some of which have incorporated our products into their own commercial products.

(2) Personal Display Systems (Head-Wearable and Headset Systems)

Our Z800 3DVisors(tm) give users the ability to work with their hands while simultaneously viewing information or video on the display. The Z800 3DVisor enables more versatile portable computing, using a 0.59-inch diagonal microdisplay (SVGA-3D capable of delivering an image that appears comparable to that of a 19-inch monitor at 22 to 24 inches from the eye, or a 105 inch movie screen at 12 foot distance. Our systems are currently being used for personal entertainment, electronic gaming, and military training and simulation, among other applications. We believe that personal display systems will fill the increasing demand for instant data accessibility and privacy in mobile workplaces. We sell the personal display systems to OEM systems and equipment customers, through distributors, and through our e-commerce website, www.3dvisor.com.

Our Market Opportunity - Personal Display Systems Platforms, including Head-wearable Displays

The growth potential of our selected target market segments have been investigated using information gathered from key industry market research firms, including DisplaySearch, Frost and Sullivan, Fuji-Chimera, International Data Corporation, Nikkei, SEMI, Stanford Resources-iSuppli and others. Such data was obtained using published reports and data obtained at industry symposia. We have also relied substantially on market projections obtained privately from industry leaders, industry analysts, and current and potential customers.

The virtual-imaging markets we are targeting include industrial, medical, military, arcade games, 3-D CAD/Virtual Reality, and wearable computers. Within each of these market sectors, we believe that our microdisplays, when combined with compact optic lenses, will become a key component for a number of mobile electronic products. Applications we are targeting the following:

Head-wearable displays incorporate microdisplays mounted in or on eyeglasses, goggles, simple headbands, helmets, or hardhats, and are often referred to as head-mounted displays (HMDs) or headsets. Head-wearable displays may block out surroundings for a fully immersive experience, or be designed as "see-through" or "see-around" to the user's surroundings. They may contain one (monocular) or two (binocular) displays. Some of the increased current interest is due to accelerating the timetable to adapt such systems to military applications such as night vision and fire and rescue applications. These have military, commercial, and consumer applications.

Military

Military demand for head-wearable displays is currently being met with microdisplay technologies that we believe to be inferior to our OLED-on-silicon products. The new generation of soldiers will be highly mobile, and will often need to carry highly computerized communications and surveillance equipment. To enable interaction with the digital battlespace, rugged, yet lightweight and energy efficient technology is required. Currently available microdisplay technologies do not meet the requirements for low power, hands-free, day and night-viewable displays. As a COTS (commercial off the shelf) component, OLED microdisplays demonstrate performance characteristics important to military and other demanding commercial and industrial applications including high brightness and resolution, wide dimming range, wider temperature operating ranges, shock and vibration resistance and insensitivity to high G-forces. The image does not suffer from flicker or color breakup in vibrating environments, and the microdisplay's wide viewing angle allows ease of viewing for long periods of time. The OLED's very low power consumption reduces battery weight and increases allowed mission length. Properly implemented, we believe that head-mounted systems incorporating our microdisplays will increase effectiveness by allowing hands-free operation and increasing situational awareness with enough brightness to be used in daylight, yet controllable for nighttime light security. The OLED's inherent wide temperature range is especially of interest for military applications because the display can turn on instantly at temperatures far below freezing and can operate at very high temperatures in desert conditions.

Our OLED microdisplays have been selected for a range of defense-security applications, including a situational awareness HMD for the US Army Land Warrior programs, a handheld thermal imager for border patrol and training, and simulation virtual monitors for Quantum 3D. The Land Warrior, a baseline program in the Army's drive to digitize the battlefield, is an integrated digital system that incorporates computerized communication, navigation, targeting and protection systems for use by the twenty-first century infantry soldier. Rockwell Collins, the principal contractor for the US Army's Land Warrior HMD system, and eMagin applied their respective expertise in HMD and imaging technology to develop rugged, yet lightweight and energy efficient products meeting the requirements of tomorrow's soldier. Our display is also used in Rockwell Collins' commercially available ProView S035 Monocular HMD. Night Vision Equipment Corporation's HelmetIR-50(TM), a lightweight, military helmet mounted thermal imager, which provides hands-free operation and allows viewers to see through total darkness, battlefield obscurants, and even foliage, is the first OLED-equipped product to be listed on the US Government's GSA schedule. Virtually Better Inc. has incorporated our Z800 3DVisor into its "Virtual Iraq" treatment for post-traumatic stress disorders. In addition, our displays have been commercialized, or planned to be commercialized, by military systems integrators including DRS, Elbit, Insight Technologies, Nivisys, Qioptiq, Saab, Sagem, and Thales, among others. We cannot assure that Government projects will remain on schedule, or that they will be fully implemented. Similar systems are of interest for other military applications as well as for related operations such as urban security, fire and rescue.

Commercial, Industrial, and Medical

We believe that a wide variety of commercial and industrial markets offer significant opportunities due to increasing demand for instant data accessibility in mobile workplaces. Some examples of microdisplay applications include: immediate access to inventory such as parts, tools and equipment availability; instant accessibility to maintenance or construction manuals; routine quality assurance inspection; endoscopic surgery; and real-time viewing of images and data for a variety of applications. As one potential example, a user wearing a HMD while using test equipment, such as oscilloscopes, can view technical data while simultaneously probing printed circuit boards. Commercial products in these sectors include Sage Technologies, Ltd.'s Helmet Vue (TM) Thermal Imaging System and Liteye's 500. VRmagic GmbH, a leading developer of virtual reality simulators, is using our OLED microdisplays in their EYESI(TM) Virtual Reality Surgical Simulator, which provides real-time simulation of ophthalmic surgery, high performance biomechanical tissue simulation, precision tracking, and realistic stereo imaging. Sensics has incorporated our OLED displays in their immersive SkyVizor (TM) virtual reality headset to serve as the "eyes" of the Robonaut, a humanoid robot being developed by NASA and Department of Defense agencies. The Robonaut system can work side by side with humans, or alone in high-risk situations. Telepresence uses virtual reality display technology to visually immerse the operator into the robot's workspace, facilitating operation and interaction with the Robonaut, and potentially reducing the number of dangerous space walks required of real astronauts. Another recent example is Saab Avionics, which has chosen eMagin microdisplays for its new Multi-Purpose Virtual Image Display (VID) which comprises high-performance magnifying optics and the OLED, sealed in an aluminum casing.

Consumer

Once our displays are manufactured in high volumes at reduced costs, we believe that our head-wearable display products may enhance the following consumer products:

- Entertainment and gaming video headset systems, which permit individuals to view television, including HDTV, video CDs, DVDs and video games on virtual large screens or stereovision in private without disturbing others. We believe that these new headset game systems can provide a game or telepresence experience not otherwise practical using conventional direct view display technology. The advent of video iPods and the rapidly increasing amount of downloadable content have accelerated the movement toward portable video technology. At the same time, the desire for larger screen sizes while retaining the iPod portability has been referenced in many publications. Virtual imaging uniquely provides a large, high resolution view in a small portable package, and we believe that our OLED on silicon technology is a best fit to help open this market.
- Notebook computers, which can use head-wearable devices to reduce power requirements as well as expand the apparent screen size and increase privacy. Current notebook computers do not use microdisplays. Our products can apply not only to new models of notebook computers, but also as aftermarket attachments to older notebooks still in use. The display can be easily used as a second monitor on notebook computers for ease of editing multiple documents to provide multiple screens or for data privacy while traveling. It can also be used to provide larger screen capability for viewing spreadsheets or complex computer aided design (CAD) files. We expect to market our head-wearable displays to be used as plug-in peripherals to be compatible with most notebook computers. We believe that the SVGA-3D microdisplay is well suited for most portable PC headsets. Our microdisplays can be operated using the USB power source of most portable computers. This eliminates added power supplies, batteries, and rechargers and reduces system complexity and cost.
- Handheld personal computers, whose small, direct view screens are often limitations, but which are now capable of running software applications that would benefit from a larger display. Microdisplays can be built into handheld computers to display more information content on virtual screens without forfeiting portability or adding the cost a larger direct view screen. Microdisplays are not currently used in this market. We believe that GPS viewers and other novel products are likely to develop as our displays become more available.

The combination of power efficiency, high resolution, low systems cost, brightness and compact size offered by our OLED-on-silicon microdisplays has not been made available to makers and integrators of existing entertainment and gaming video headset systems, notebook computers and handheld computers. We believe that our microdisplays have the potential to propel the growth of new products and applications such as lightweight wearable computer systems.

Our Strategy

Our strategy is to establish and maintain a leadership position as a worldwide supplier of microdisplays and virtual imaging technology solutions for applications in high growth segments of the electronics industry by capitalizing on our leadership in both OLED-on-silicon technology and microdisplay lens technology. We aim to provide microdisplay and complimentary accessories to enable OEM customers to develop and manufacture new and enhanced electronic products. Some key elements of our strategy to achieve these objectives includes the following:

- Leverage our superior technology to establish a leading market position. As the first to exploit OLED-on-silicon microdisplays, we believe that we enjoy a significant advantage in bringing this

technology to market.

- Optimize manufacturing efficiencies by outsourcing while protecting proprietary processes. We outsource certain portions of microdisplay production, such as chip fabrication, to minimize both our costs and time to market. We intend to retain the OLED application and OLED sealing processes in-house. We believe that these areas are where we have a core competency and manufacturing expertise. We also believe that by keeping these processes under tight control we can better protect our proprietary technology and process know-how. This strategy will also enhance our ability to continue to optimize and customize processes and devices to meet customer needs. By performing the processes in-house we can continue to directly make improvements in the processes, which will improve device performance. We also retain the ability to customize certain aspects such as color balance, which is known as chromaticity, as well as specialized boards or interfaces, and to adjust other parameters at the customer's request. In the area of lenses and head-wearable displays, we intend to focus on design and development, while working with third parties for the manufacture and distribution of finished products. We intend to prototype new optical systems, provide customization of optical systems, and manufacture limited volumes, but we intend to outsource high volume manufacturing operations. There are numerous companies that provide these outsource services.
- Build and maintain strong internal design capabilities. As more circuitry is added to OLED-on-silicon devices, the cost of the end product using the display can be decreased; therefore integrated circuit design capability will become increasingly important to us. To meet these requirements, we utilize in-house design capabilities supplemented by outsourced design services. Building and maintaining this capacity will allow us to reduce engineering costs, accelerate the design process and enhance design accuracy to respond to our customers' needs as new markets develop. In addition, we intend to maintain a product design staff capable of rapidly developing prototype products for our customers and strategic partners. Contracting third party design support to meet demand and for specialized design skills will also remain a part of our overall long term strategy.

Our Strategic Relationships

Strategic relationships have been an important part of our research and development efforts to date and are an integral part of our plans for commercial product launch. We have forged strategic relationships with major OEMs and strategic suppliers. We believe that strategic relationships allow us to better determine the demands of the marketplace and, as a result, allow us to focus our future research and development activities to better meet our customer's requirements. Moreover, we expect to provide microdisplays and Microviewers(TM) to some of these partners, thereby taking advantage of established distribution channels for our products.

Eastman Kodak is a technology partner in OLED development, OLED materials, and a potential future customer for both specialty market display systems and consumer market microdisplays. We license Eastman Kodak's OLED and optics technology portfolio. We have a nonexclusive; perpetual, worldwide license to use Eastman Kodak patented OLED technology and associated intellectual property in the development, use, manufacture, import and sale of microdisplays. The license covers emissive active matrix microdisplays with a diagonal size of less than 2 inches for all OLED display technology previously developed by Kodak. An annual minimum royalty is paid at the beginning of each calendar year and is fully creditable against the royalties we are obligated to pay based on net sales throughout the year. Eastman Kodak and eMagin have engaged in numerous discussions regarding potential product applications for eMagin's microdisplays by Eastman Kodak.

We are working cooperatively with the US Army, US Navy, and with several military system integrators to further characterize operation of our displays in rugged military environments. We have a Cooperative Research and Development Agreement (CRADA) with the US Army Night Vision Electronic Sensors Directorate (NVESD) to characterize performance of our displays. We are currently partnering with the University of Michigan to develop advanced display process via a government-sponsored research program. We intend to continue to establish additional strategic relationships in the future.

We are a member of the United States Display Consortium (USDC), a cooperative effort between industry and government whose charter is to develop an infrastructure to support North American flat panel display manufacturing. It has more than 100 members, as well as support from the Department of Defense. The USDC's role is to provide a common platform for flat panel display manufacturers, developers, users and the manufacturing equipment and supplier base.

Our Technology Platforms

OLED-on-Silicon Technology

Scientists working at Eastman Kodak invented OLEDs in the early 1980s. OLEDs are thin films of stable organic materials that emit light of various colors when a voltage is impressed across them. OLEDs are emissive devices, which mean they create their own light, as opposed to liquid crystal displays, which require a separate light source. As a result, OLED devices use less power and can be capable of higher brightness and fuller color than liquid crystal microdisplays. Because the light they emit is Lambertian, which means that it appears equally bright from most forward directions, a moderate movement in the eye does not change the image brightness or color as it does in existing technologies. OLED films may be coated on computer chips, permitting millions of individual low-voltage light sources to be built on silicon integrated circuits to produce single color, white or full-color display arrays. Many computer and video electronic system functions can be built directly into a silicon integrated circuit as part of the OLED display, resulting in an ultra-compact system. We believe these features, together with the well-established silicon integrated circuit fabrication technology of the semiconductor industry, make our OLED-on-silicon microdisplays attractive for numerous applications.

We believe our technology licensing agreement with Eastman Kodak, coupled with our own intellectual property portfolio, gives us a leadership position in OLED and OLED-on-silicon microdisplay technology. Eastman Kodak provides OLED technology and we provide additional technology advancements that have enabled us to coat the silicon integrated circuits with OLEDs.

We have developed numerous and significant enhancements to OLED technology as well as key silicon circuit designs to effectively incorporate the OLED film on a silicon integrated circuit. For example, we have developed a unique, top-emitting structure for our OLED-on-silicon devices that enables OLED displays to be built on opaque silicon integrated circuits rather than only on glass. Our OLED devices can emit full visible spectrum light that can be isolated with color filters to create full color images. Our microdisplay prototypes have a brightness that can be greater than that of a typical notebook computer and can have a potential useful life of over 50,000 operating hours, in certain applications. New materials and device improvements in development offer future potential for even better performance for brightness, efficiency, and lifespan. Additionally, we have invested considerable work over several years to develop unique electronics control and drive designs for OLED-on-silicon microdisplays.

In addition to our OLED-on-silicon technology, we have developed compact optic and lens enhancements which, when coupled with the microdisplay, provide the high quality large screen appearance that we believe a large proportion of the marketplace demands.

Advantages of OLED Technology

We believe that our OLED-on-silicon technology provides significant advantages over existing solutions in our targeted microdisplay markets. We believe these key advantages will include:

- Low manufacturing cost;
- Low cost system solutions;
- Wide angle light emission resulting in large apparent screen size;
- Low power consumption for improved battery life and longer system life;
- High brightness for improved viewing;
- High-speed performance resulting in clear video images;
- Wide operating temperature range; and
- Good environmental stability (vibration and humidity).

Low manufacturing cost. Many OLED-on-silicon microdisplays can be built on an 8-inch silicon wafer using existing automated OLED and color filter processing tools. The level of automation used lowers labor costs. Only a minute amount of OLED material is used in each OLED-on-silicon microdisplay so that material costs, other than the integrated circuit itself, are small. The number of displays per silicon wafer may be higher on OLEDs than on liquid crystal displays, or LCDs, because OLEDs do not require a space-wasting perimeter seal band. Expensive transparent wafers with CMOS silicon laminated onto quartz are not required for OLED microdisplays, as standard CMOS chips may be used as backplanes.

Low cost systems solutions. In general, an OEM using OLED-on-silicon microdisplays will not need to purchase and incorporate lighting assemblies, color converter related Applications Specific Integrated Circuits, or ASICs, or beam splitter lenses as is the case in liquid crystal microdisplays, which also require illumination. Many important display-related system functions can be incorporated into an OLED-on-silicon microdisplay, reducing the size and cost of the system. Non-polarized light from OLEDs permit lenses for many OLED-on-silicon applications that are made of a single piece of molded plastic, which reduces size, weight and assembly cost when compared to the multipiece lens systems used for liquid crystal microdisplays. System cost relative to liquid crystal and liquid crystal on silicon, or LCOS, competitive products is thus reduced. Because our displays are power efficient, they typically require less power at the system level than other display technologies at a given display size and brightness.

Wide-angle light emission simplifies optics for large apparent screen size. OLEDs emit light at most forward directions from each pixel. This permits the display to be placed close to the lens in compact optical systems. It also provides the added benefit of less angular dependence on the image quality relative to pupil and eye position when showing a large field of view, unlike reflective LCOS microdisplays. This results in less eye fatigue and makes it relatively easy to low power consumption for improved battery life and longer system life. OLEDs emit light rather than transmitting it, so no power-consuming backlight or front light, as required for liquid crystal displays, is required. OLEDs can be energy efficient because of their high efficiency light generation. Furthermore, OLEDs conserve power by powering only those pixels that are on while liquid crystal on silicon requires light at all pixels all the time. Most optical systems used for our OLEDs are highly efficient, permitting over 80% of the light to reach the eye, whereas reflective technologies such as liquid crystal on silicon require multiple beam splitters to get light to the display, and then into the optical system. This results in typically less than 25% light throughput efficiency in reflective microdisplay systems. Most important, we do not need a power-hungry video frame buffer, as required in liquid crystal frame-sequential color systems. Battery life can therefore be extended.

High brightness for improved viewing. This feature can be of great value to military applications, where there is a need to see the computer image overlaid onto brightly lit real-life backgrounds such as desert sand, water reflections or sunlit clouds. The OLED can be operated over a large luminance range without loss of gray level control,

permitting the displays to be used in a range of dark environments to very bright ambient applications. Since military simulation and situation awareness applications, including night vision, typically require large fields of view, the OLED's Lambertian optical characteristics make it an excellent choice.

High-speed performance resulting in clear video image. OLEDs switch much more rapidly than liquid crystals or most cathode ray tubes, or CRTs. This results in smear-free video rate imagery and provides improved image quality for DVD playback applications. This eliminates visible image smear and makes practicable three-dimensional stereo imaging using a split frame rate. This advantage of our OLED-on-silicon is very important for 3-D stereovision gaming applications.

Flicker-free and no color breakup. Because the OLED-on-silicon stores brightness and color information at each pixel, the display can be run with no noticeable flicker and no color sequential breakup, even at low refresh rates. A lower refresh rate not only helps reduce power, but it also facilitates system integration. Color sequential breakup occurs in systems such as liquid crystal on silicon and some liquid crystal display microdisplays when red, green and blue frames are sequentially imaged in time for the eye to combine. Since the different color screens occur at different times, movement of the eye due to vibration or just fast pupil movement can create color bands at each dark-light edge, making the image unpleasant to view and making text difficult to read. For example, the liquid crystal on silicon display needs to run at least three times the "normal" frame rate or speed to produce color sequential images, which wastes power and makes for a difficult technological challenge as display resolutions increase.

Wide operating temperature range. Our OLEDs offer much less temperature sensitivity at both high and low temperatures than LCDs. LCDs are sluggish or non-operative much below freezing unless heaters are added and lose contrast above 50 degrees Celsius, while our OLEDs turn on instantly and can operate between -55 degrees Celsius and 130 degrees Celsius. We specify a smaller temperature range on most consumer products to accommodate lower cost packaging. This is an important characteristic for many portable products that may be used outdoors in many varying environmental conditions. It is especially important for military customers. Insensitivity to vibration, shock, and pressure are also important environmental control attributes.

Complementary lens and system technologies. We have developed a wide range of technologies which complement our core OLED and lens technologies and which will enhance our competitive position in the microdisplay and head-wearable display markets. These include:

Lens technology. High quality, large view lenses with a wide range for eye positioning are essential for using our displays in near-eye systems. We have developed advanced lens technology for microdisplays and personal head-wearable display systems and hold key patents in these areas. Our lens technology permits our OLED-on-silicon microdisplays to provide large field of view images that can be viewed for extended periods with reduced eye-fatigue. We have engaged a firm to manufacture our lenses in order to provide them in larger quantities to our customers and are using them in our own personal display systems.

We believe that the key advantages of our lens technology include:

- Can be very low cost, with minimal assembly. A one piece, molded plastic optic attached to the microdisplay has been introduced and may potentially serve consumer end-product markets. Since our process is plastic molding, our per unit production costs are low;
- Allows a compact and lightweight lens system that can greatly magnify a microdisplay to produce a large field of view. For example, our WF05 prism lens, in combination with our SVGA OLED microdisplay, provides a virtual view equivalent to that of a 105-inch diagonal display viewed at 12 feet;
- Can use single-piece molded microdisplay lenses to permit high light throughput making the display image brighter or permitting the use of less power for an acceptable brightness;
- Can be designed to provide focusing to enable users with various eyesight qualities to view images clearly; and
- Can optionally provide focal plane adjustment for simultaneous focusing of computer images and real world objects. For example, this characteristic is beneficial for word processing or spreadsheet applications where a person is typing data in from reference material. This feature can make it easier for people with moderately poor accommodation to use a head-wearable display as a portable computer-viewing accessory.

Personal display system technology. We have developed ergonomic technologies that make head-wearable displays easier to use in a wide variety of applications. For example, the use of our patented rotatable Eyeblocker(TM) provides a sharp image without requiring most users to squint. The Eyeblocker can also be moved to create an effective see-through appearance. To our knowledge, we have made the lightest weight, high-resolution head-wearable display with an over 35 degree diagonal field of view ever publicly demonstrated. We have also incorporated low cost, small size, high speed headtrackers to further enhance game and telepresence applications.

Sales and Marketing

We primarily provide display components for OEMs to incorporate into their branded products and sell through their own well-established distribution channels. In addition, we market head-wearable displays directly to various vertical market channels, such as medical, industrial, and government customers. A typical buyer is a manufacturer of a product requiring a specific resolution of visual display or viewfinder for insertion into a product such as a portable DVD headset, a PC-gaming headset, or an instrument.

We market our services in North America, Asia, and Europe primarily through direct technical sales from our headquarters. Regular purchase orders are processed by our customer service coordinators and technical questions related to product purchases or product applications are processed by our technical support team. As a market-driven company, we assess customer needs both quantitatively and qualitatively, through market research and direct communications. Because our microdisplays are the main functional component that defines many of our customers'

end products, we work closely with potential customers to define our products to optimize the final design, typically on a senior engineer-to-engineer basis. Our personal display systems are sold through select value-added resellers and on-line through PC Mall, Google Checkout, and our e-commerce site, www.3dvisor.com.

We identify companies with end products and applications for which we believe that our products will provide a system level solution and for which our products can be a key differentiator. We target both market leaders and select early adopter companies; their acceptance validates our technology and approach in the market. We believe successful marketing will require relationships with recognized consumer brand companies.

Near term sales efforts for OLED microdisplays have been focused on our military, industrial, and medical customers. We have received production orders and design wins for both the SVGA+ and SVGA 3D displays. To date, we have shipped products and evaluation kits to more than 200 OEM customers. An OEM design cycle typically requires between 6 and 36 months, depending on the uniqueness of the market and the complexity of the end product. New product development may require several design iterations prior to commercialization. Some of our initial customers have completed their initial evaluation cycle and we continue to receive follow-on orders and notification of product purchase decisions. (See "Our Market Opportunity: Military; Commercial, Industrial, and Medical; and Consumer")

Customers

Customers for our products include both large multinational and smaller OEMs. We maintain relationships with OEMs in a diverse range of industries encompassing the military, industrial, medical, and consumer market sectors. During 2007, 51% of our net revenue was to firms based in the United States and 49% was to international firms as compared to 59% domestic revenue and 41% international revenue during 2006. In 2007, we had 10 customers that accounted for more than 54% of our total revenue as compared to 5 customers that accounted for more than 68% of our total revenue in 2006. In 2007, we did not have any customers that accounted for more than 10% of our total revenue as compared to 2006, when we had one customer that accounted for 13% of our total revenues.

Backlog

As of January 5, 2009, we had a backlog of approximately \$4.5 million for purchases through December 31, 2009. This backlog consists of purchase orders and purchase agreements but does not include expected revenue from R&D contracts or expected NRE (non-recurring engineering) programs under development.

The majority of our backlog consists of purchase agreements for delivery over the next 12 months. Most purchase orders are subject to rescheduling or cancellation by the customer with no or limited penalties. Because of the possibility of customer changes in delivery schedules or cancellations and potential delays in product shipments, our backlog as of a particular date may not be indicative of net sales for any succeeding period. Some customers have experienced delays in their expected product launch schedules due to their own product development delays not directly related to our microdisplays, such as development of custom optics or other aspects of their end product, or by delays in government programs contracted to them.

Research and Development

Near-to-the-eye virtual imaging and OLED technology are relatively new technologies that have considerable room for substantial improvements in luminance, life, power efficiency, voltage swing, design compactness, field of view, optical range of visibility, headtracking options, wireless control and many other parameters. We anticipate that achieving reductions in manufacturing costs will require new technology developments. We also anticipate that improving the performance, capability and cost of our products will provide an important competitive advantage in our fast moving, high technology marketplace. Past and current research activities include development of improved OLED and display device structures, developing and/or evaluating new materials (including the synthesis of new organic molecules), manufacturing equipment and process development, electronics design methodologies and new circuits and the development of new lenses and related systems. In 2007, we spent approximately \$2.9 million on research and development. In 2007 we continued to research more efficient materials and processes. We also completed the primary designs of our new smaller display, the SVGA 3DS, as well as the design of the SXGA.

External relationships play an important role in our research and development efforts. Suppliers, equipment vendors, government organizations, contract research groups, external design companies, customer and corporate partners, consortia, and university relationships all enhance the overall research and development effort and bring us new ideas (See "Strategic Relationships").

U.S. Government-Funded Research

We have entered into several U.S. government contracts to fund a portion of our efforts to develop next-generation OLED technologies for a variety of applications. These include, among others, Small Business Innovation Research (SBIR) Phase II program contracts for continued research and development and the fabrication of prototypes. On contracts for which we are the prime contractor, we subcontract portions of the work to various entities and institutions, including the University of Michigan. Our recent government contracts include the following:

OLED Performance and Reliability Improvement for Active Matrix OLED Microdisplays. Armed forces as well as other security related agencies are relying increasingly on the benefits of OLED technology in active matrix microdisplays. Applications range from night vision thermal imaging to tactical awareness and communication systems to weapons-mounted sights, among others. As the systems capabilities are expanded, the need for higher brightness and ability to display static imagery such as maps and drawings is growing, placing higher demands on the OLED technology. In 2007 eMagin was awarded a contract managed by the Night Vision Electronic Sensors Directorate (NVESD) with funding by the Department of Defense Appropriations Bill. The objective of the program is to improve on the present performance of the microdisplay-based OLED technology from lifetime, efficiency and

reliability standpoints. For 2007, we received approximately \$360 thousand of the \$1.12 million program. The FY 2008 Department of Defense Appropriations Bill has provided for continuation of a second phase of the program

Organic Light Emitting Diode (OLED) Display Technology for Military Aircraft. In 2007 we continued our efforts to develop a robust thin film encapsulation technique for OLED displays under a Small Business Technology Transfer (STTR) program from the US Navy. University of Michigan, Ann Arbor, MI is the university partner for this STTR. Many new schemes to encapsulate OLED devices with thin film techniques were developed, evaluated and tested under accelerated environmental condition. The contract expired on February 29, 2008. For 2007 we received approximately \$328 thousand in funding under this program.

Ultra High Resolution Display for Army Medicine. In 2007 we formally initiated efforts on a multiple year program under contract with the US Army TATRC (Telemedicine and Advanced Technologies Research Center) with funding provided by the FY 2006 and 2007 Department of Defense Appropriations Bills. The culmination of this multiple year effort will provide an ultra-high resolution, wide field of view display system suitable for dual-use application within Army medicine, U.S. military simulation and training, and commercial uses. We received approximately \$698 thousand in funding during 2007 under this contract and expect to receive approximately \$2 million during 2008.

High Dynamic Range Microdisplay Feasibility Study. The US Army/RDECOM/NVESD and eMagin Corporation have established a CRADA (Cooperative Research and Development Agreement) with the goal of evaluating and characterizing new and existing AMOLED microdisplay configurations with an emphasis on the usable lifetime of the displays. This work is aimed at developing AMOLED microdisplays capable of being fielded in a wide range of US Army applications. The effort is for a 3 month period and is a feasibility study aimed at evaluating several concepts leading to a higher dynamic range without changing the existing pixel driver design of the microdisplays. If successful, a second phase can be considered addressing a complete high dynamic range OLED microdisplay. The total program cost for the 3 month program is approximately \$236 thousand. The program started on March 14, 2008.

Manufacturing Facilities

We are located at IBM's Microelectronics Division facility, known as the Hudson Valley Research Park, located about 70 miles north of New York City in Hopewell Junction, New York. We lease approximately 33,000 square feet of space which houses our own equipment for OLED microdisplay fabrication and research and development, includes a 16,300 square foot class 10 clean room space, additional lower level clean room space, assembly space and administrative offices.

Facilities services provided by IBM include our clean room, pure gases, high purity de-ionized water, compressed air, chilled water systems, and waste disposal support. This infrastructure provided by our lease with IBM provides us with many of the resources of a larger corporation without the added overhead costs. It further allows us to focus our resources more efficiently on our product development and manufacturing goals.

We lease additional non-clean room facilities for chemical mixing, cleaning, chemical systems, and glass/silicon cutting. OLED chemicals can be purified in our facility with our own equipment, permitting the company to evaluate new chemicals in pilot production that are not yet available in suitable purity for OLED applications on the market.

Our display fabrication process starts with the silicon wafer, which is manufactured by a semiconductor foundry using conventional CMOS process. After a device is designed by a combination of internal and external designers with customer participation, we outsource wafer fabrication.

Our manufacturing process for OLED-on-silicon microdisplays has three main components: organic film deposition, organic film encapsulation (also known as sealing), and color filter processing. All steps are performed in semi-automated, hands-free environment suitable for high volume throughput. An automated cluster tool provides all OLED deposition steps in a highly controlled environment that is the centerpiece of our OLED fabrication. After wafer processing, each part is inspected using an automated inspection system, prior to shipment. We have electrical and optical instrumentation required to characterize the performance of our displays including photometric and color coordinate analysis. We are also equipped for integrated circuit and electronics design and display testing.

We also lease a facility in Bellevue, Washington where we operate our system development effort and business development activities. The facilities are well suited for designing and building limited volume prototypes and small quantity industrial or government products. Cables and electronic interfaces have recently been produced to permit our OEM customers to more rapidly create products and shorten their time-to-market. We plan to outsource medium to high volume subsystem production to low cost plastics, lenses, and assembly manufacturers. We are currently using domestic and international outside manufacturers and we are investigating new outsource opportunities.

We believe that manufacturing efficiency is an important factor for success in the consumer markets. We believe that high yield and maximum utilization of our equipment set will be key for profitability. The equipment required for initial profitable production is in place. Some equipment will be added when our production volume increases or as needed.

Intellectual Property

We have developed a significant intellectual property portfolio of patents, trade secrets and know-how, supported by our license from Eastman Kodak and our current patent portfolio.

Our license from Eastman Kodak gives us the right to use in miniature displays a portfolio in organic light emitting diode and optics technology, some of which are fundamental. Our agreement with Eastman Kodak provides for perpetual access to the OLED technology for our OLED-on-silicon applications, provided we remain active in the field and meet our contractual requirements to Eastman Kodak. We also generate intellectual property as a result of our internal research and development activities.

Our patents and patent applications cover a wide range of materials, device structures, processes, and fabrication techniques, such as methods of fabricating full color OLEDs. We believe that our patent applications relating to up-emitting structures on opaque substrates such as silicon wafers, which are critical for OLED microdisplays, and applications relating to the hermetic sealing of such structures are particularly important.

Our patents are concentrated in the following areas:

- OLED Materials, Structures, and Processes;
- Display Color Processing and Sealing;
- Active Matrix Circuit Methodologies and Designs;
- Field Emission and General Display Technologies;
- Lenses and Tracking (Eye and Head);
- Ergonomics and Industrial Design; and
- Wearable Computer Interface Methodology

We also rely on proprietary processes, trade secrets, and know-how related to OLED technologies and materials which are not patented. To protect this information and know-how from unauthorized use or disclosure, we require all employees, and where appropriate, contractors, consultants, advisors and collaborators to enter into confidentiality and non-competition agreements. There can be no assurance, however, that these agreements will provide meaningful protection for our trade secrets, know-how or other proprietary information in the event of any unauthorized use, misappropriation or disclosure of such trade secrets, know-how or other proprietary information.

We believe that our intellectual property portfolio, coupled with our strategic relationships and accumulated experience in the OLED field, gives us an advantage over potential competitors.

Competition

The industry in which we operate is highly competitive. We may face competition from legacy technologies such as CRTs as well as from alternative flat panel display technologies. We believe that our key competition will come from liquid crystal on silicon microdisplays, or LCOS, also known as reflective liquid crystal displays and small transmissive LCDs. While we believe that OLED-on-silicon has the capability to provide higher quality image quality images, greater environmental ruggedness, reduced electronics cost and complexity, and improved power efficiency advantages over either type of liquid crystal based microdisplays, there is no assurance that these benefits will be fully realized or that liquid crystal manufacturers will not suitably improve these parameters to reduce these potential advantages of OLEDs.

Most companies pursuing liquid crystal on silicon technology, such as Syntax/Brilliant Corporation, among others, have primarily focused on projection microdisplays, which do not compete directly with us. In most near-to-the-eye imaging markets, we face more serious competition from developers of transmissive liquid crystal displays, such as those developed by Kopin, or possibly laser scanning systems, such as those developed by Microvision Corporation. Large amounts of investment in an intrinsically weaker technology can potentially overcome advantages of one technology over another.

To our knowledge, the only other company that has publicly stated plans to develop OLED microdisplays for near-eye applications is MicroEmissive Displays (MED) in Britain. MED has raised substantial funds and created a newer facility than ours. This competition has not been significant to date, but could become more serious if they enter our markets with directly relevant display designs and resolve their manufacturing and reliability-lifetime issues.

We may also compete with potential licensees of Universal Display Corporation, Eastman Kodak, or Sumitomo Corporation and other companies, each of which potentially can license OLED technology portfolios. Even though we could also potentially license technology from these developers, potential competitors could also obtain such licenses and may do so at more favorable royalty rates or allocate more resources to the competitive effort than we could obtain. However, should they decide to embark on developing microdisplays on silicon, we believe that our progress to date in this area gives us a substantial head start.

Employees

As of January 5, 2009, we had a total of 60 full time and part time staff. None of our employees are represented by a labor union. We have not experienced any work stoppages and consider our relations with our employees to be good.

DESCRIPTION OF PROPERTY

Our corporate offices are located in Bellevue, Washington. Our Washington location includes administrative, finance, operations, research and development and sales and marketing functions and consists of leased space of approximately

19,000 square feet. The lease expires in 2009. Our manufacturing facility is located in Hopewell Junction, New York, where we lease approximately 33,000 square feet from IBM. The NY facility houses our equipment for OLED microdisplay fabrication, assembly operations, research and development, and administrative functions. The lease expires in 2009. We believe our facilities are adequate for our current and near-term needs. See Note 12 to our December 31, 2007 consolidated financial statements for more information about our lease commitments.

LEGAL PROCEEDINGS

From time to time, we may become involved in various lawsuits and legal proceedings which arise in the ordinary course of business. However, litigation is subject to inherent uncertainties, and an adverse result in these or other matters may arise from time to time that may harm our business. We are currently not aware of any such legal proceedings or claims that we believe will have, individually or in the aggregate, a material adverse affect on our business, financial condition or operating results.

A former employee (“plaintiff”) of the Company commenced legal action in the United States District Court for the Southern District of New York, on or about October 12, 2007, alleging that the plaintiff was subject to gender based discrimination and retaliation in violation of Title VII of the Civil Rights Act of 1964 (Case No. 07-CV-8827 (KMK)). The plaintiff seeks unspecified compensatory damages, punitive damages and attorneys’ fees. On November 26, 2007, the Company served and filed its Answer, in which it denied the material allegations of the Complaint and asserted numerous affirmative defenses. This action is presently in the discovery stage. The Company disputes the allegations of the Complaint and intends on vigorously defending this action.

On December 6, 2005, New York State Urban Development Corporation commenced action against eMagin in the Supreme Court of the State of New York, County of New York against eMagin, asserting breach of contract and seeking to recover a \$150,000 grant which was made to eMagin based on goals set forth in the agreement for recruitment of employees. On July 13, 2006, eMagin agreed to a settlement with the New York State Urban Development Corporation to repay \$112,200 of the \$150,000 grant. The settlement requires that repayments be made on a monthly basis in the amount of \$3,116.67 per month commencing August 1, 2006 and ending on July 1, 2009.

MANAGEMENT

The following table sets forth the names of our directors and executive officers as of September 30, 2008:

Name	Age	Position
Andrew G. Sculley (5)	57	Chief Executive Officer and President
Paul Campbell (4)	52	Interim Chief Financial Officer
Susan K. Jones	56	Chief Business Officer, Secretary
Adm. Thomas Paulsen (Ret.) (2)(3*)	71	Chairman of the Board, Director
Claude Charles (1)	71	Director
Paul Cronson	51	Director
Irwin Engelman (1*)	73	Director
Dr. Jacob Goldman (2*)(3)	86	Director
Brig. Gen. Stephen Seay (Ret.) (1)(3)	61	Director

(1) Audit Committee

(2) Governance & nominating Committee

(3) Compensation Committee

(4) On April 14, 2008, Michael D. Fowler resigned from his position as Interim Chief Financial Officer of the Company

(5) As of June 1, 2008, Andrew G. Sculley is Chief Executive Officer and President. Admiral Paulsen resigned from his position as interim Chief Executive Officer and continues to serve as Chairman of the Board.

* Committee Chair

Andrew G. Sculley became the Company's Chief Executive Officer and President on June 1, 2008. Mr. Sculley served as the General Manager of Kodak's OLED systems Business Unit and Vice President of Kodak's Display Business from 2004 to 2008. From 2003 to 2006, he served on the Board of Directors of SK Display, a joint venture between Sanyo and Kodak. From 1996 to 2001 Mr. Sculley served as the Manager of Operations, CFO and member of the Board of Directors of Kodak Japan Ltd., where he managed Distribution, Information Technologies, Legal, Purchasing and Finance. Previously, he held positions in strategic planning and finance in Eastman Kodak Company. Mr. Sculley holds an MBA from Carnegie-Mellon University and an MS in physics from Cornell University. He attended Harvard University's International Senior Management Program while an executive at Kodak.

Paul Campbell became the Company's Interim Chief Financial Officer on April 15, 2008. Mr. Campbell has been a partner with Tatum, LLC ("Tatum"), an executive services firm, since November 2007. Mr. Campbell served as the Chief Financial Officer of four public companies, including Checkers Drive-In Restaurants, Inc, which until 2006 was traded on the Nasdaq and as Chief Financial Officer of Famous Dave's of America, Inc., a publicly held company currently trading on the Nasdaq. Mr. Campbell also served as Chief Financial Officer of Sonus Corporation, a medical device retailer, and of Organic To Go, Inc., an emerging publicly-held food company, from May 2007 through October 2007. From 2001 through April 2007, Mr. Campbell owned and operated Campbell Capital, LLC, a consulting and investment firm in Seattle, Washington providing strategic planning and financing services to small

businesses. Mr. Campbell received his Masters of Business Administration from Pepperdine University and his Bachelor of Arts degree in Business Economics from the University of California at Santa Barbara.

Susan K. Jones has served as Executive Vice President and Secretary since 1992, and assumed responsibility of Chief Business Officer in 2008. Ms. Jones has more than 30 years of industrial experience, including senior research, management, and marketing assignments at Texas Instruments and Merck, Sharp, & Dohme Pharmaceuticals. Ms. Jones serves on the boards or chairs committees for industry organizations including IEEE, SPIE, and SID. Ms. Jones served as a director of eMagine Corporation from 1993 to 2000 and was a director of Virtual Vision, Inc. Ms. Jones graduated from Lamar University with a B.S. in chemistry and biology, holds more than a dozen patents, and has authored more than 100 papers and talks.

Rear Admiral Thomas Paulsen resigned from his position as Interim CEO and President on June 1, 2008 and continues to serve as Chairman of the Board. He has served as a director since July 2003. Admiral Thomas Paulsen served for over 34 years in the US Navy in Command Control, Communications and Intelligence (C3I), Telecommunications, Network Systems Operations, Computers and Computer Systems Operations until his retirement in 1994 as a Rear Admiral. He then served as Chief Information Officer for Williams Telecommunications. Admiral Paulsen has served as a director of Umbanet, Inc. since 2002. Since 2000, Admiral Paulsen has served on the Board of Governors of the Institute of Knowledge Management, George Washington University. Since 1994, he has served as the Chairman of the Advisory Board and President Emeritus of the Center for Advanced Technologies (CAT) and a Managing Partner on the National Knowledge and Intellectual Property Management Taskforce, a not-for-profit company headquartered in Dallas, Texas, and is a member of the Board of Governors for the Japanese American National Museum, Los Angeles, California.

Claude Charles has served as a director since April of 2000. Mr. Charles has served as President of Azure Capital Limited since 1999. From 1996 to 1998 Mr. Charles was Chairman of Equinox Group Holdings. Prior to 1996, Mr. Charles has also served as a director and in senior executive positions at SG Warburg and Co. Ltd., Peregrine Investment Holdings, Trident International Finance Ltd., and Dow Banking Corporation. Mr. Charles holds a B.S. in economics from the Wharton School at the University of Pennsylvania and a M.S. in international finance from Columbia University.

Paul Cronson has served as a director since July of 2003. Mr. Cronson is Managing Director of Larkspur Capital Corporation, which he founded in 1992. Larkspur is a broker dealer that is a member of the National Association of Securities Dealers and advises companies seeking private equity or debt. Mr. Cronson's career in finance began in 1979 at Laidlaw, Adams Peck where he worked in asset management and corporate finance. From 1983 to 1985, Mr. Cronson worked with Samuel Montagu Co., Inc. in London, where he marketed eurobond issuers and structured transactions. Subsequently from 1985 to 1987, he was employed by Chase Investment Bank Ltd., where he structured international debt securities and he developed "synthetic asset" products using derivatives. Returning to the U.S., he joined Peter Sharp Co., where he managed a real estate portfolio, structured financings and assisted with capital market investments until 1992. Mr. Cronson received his BA from Columbia College in 1979, and his MBA from Columbia University School of Business Administration in 1982. He is on the Board of Umbanet, in New York City, a private company specializing in email based distributed applications and secure messaging.

Irwin Engelman has served as a director since May of 2005. He is currently a consultant to various industrial companies. He is currently a director of Sanford Bernstein Mutual Funds, a publicly-traded company, and a member of its audit committee. From November 1999 until April 2002, he served as Executive Vice President and Chief Financial Officer of YouthStream Media Networks, Inc., a media and retailing company serving high school and college markets. From 1992 until April 1999, he served as Executive Vice President and Chief Financial Officer of MacAndrews and Forbes Holdings, Inc., a privately-held financial holding company. From November 1998 until April 1999, he also served as Vice Chairman, Chief Administrative Officer and a director of Revlon, Inc., a publicly-traded consumer products company. From 1978 until 1992, he served as an executive officer of various public companies including International Specialty Products, Inc. (a subsidiary of GAF Holdings Inc.), CitiTrust Bancorporation, General Foods Corporation and The Singer Company. Mr. Engelman received a BBA in Accounting from Baruch College in 1955 and a Juris Doctorate from Brooklyn Law School in 1961. He was admitted practice law in the State of New York in 1962. In addition, he was licensed as a CPA in the State of New Jersey in 1966.

Dr. Jack Goldman joined our board of directors in February of 2003. Dr. Goldman is the retired senior vice-president for R&D and chief technical officer of the Xerox Corporation. While at Xerox, he founded and directed the celebrated Xerox PARC laboratory. Prior to joining Xerox, Dr. Goldman was Director of Ford Motor Company's Scientific Research Laboratory. He also served as Visiting Edwin Webster Professor at MIT. Dr. Goldman presently serves on the Boards of Directors of Umbanet Inc. and Medis Technologies Inc., and he has served on the Boards of Xerox, General Instrument Corp., United Brands, Intermagnetics General, GAF and Bank Leumi USA. He has also been active in government and professional advisory roles including service on the US Dept. of Commerce Technical Advisory Board, chairman of Statutory Visiting Committee of The National Bureau of Standards (National Institute of Standards and Technology), vice-president of the American Association for the Advancement of Science and president of the Connecticut Academy of Science and Engineering.

General Stephen Seay was elected to the Board of Directors in January 2006. In his 33-year Army career, General Stephen Seay held a wide variety of command and staff positions, most importantly as a soldier's soldier volunteering for his final assignment with his troops in Iraq. Most recently he was Program Executive Officer for Simulation, Training and Instrumentation, and Commanding General, Joint Contracting Command-Iraq/Head of Contracting Authority, Operation Iraqi Freedom. He has also served as Program Manager for a joint system, headed the Joint Target Oversight Council and was Commanding General, Simulation, Training and Instrumentation Command

(STRICOM), Army Materiel Command. Earlier, as a Field Artillery officer, he commanded at all levels, rising to corps artillery commander. He served as Chief of Staff, United States Army, Europe (Forward) and National Security Element, Tazsar, Hungary, during Operation Joint Endeavor. He held resource management, operations research, and acquisition positions during three tours on Department of the Army staff. Stephen Seay holds a Bachelor of Science degree from the University of New Hampshire and a Master of Science degree from North Carolina State University.

CORPORATE GOVERNANCE

Code of Ethics

We have adopted a Code of Business Conduct and Ethics that applies to all of our directors, officers and employees, including our principal executive officer, principal financial officer and principal accounting officer. The Code of Business Conduct and Ethics is posted on our website at <http://www.emagin.com/investors>.

We intend to satisfy the disclosure requirement under Item 10 of Form 8-K regarding an amendment to, or waiver from, a provision of this Code of Business Conduct and Ethics by filing a Current Report on Form 8-K with the SEC, disclosing such information.

Section 16(a) Beneficial Ownership Reporting Compliance

Section 16(a) of the Securities Exchange Act of 1934, as amended, requires our directors and executive officers and persons who own more than 10% of the issued and outstanding shares of eMagin common stock to file reports of initial ownership of common stock and other equity securities and subsequent changes in that ownership with the SEC and the NYSE. Officers, directors and greater than ten percent stockholders are required by SEC regulation to furnish us with copies of all Section 16(a) forms they file. To our knowledge, based solely on a review of the copies of such reports furnished to us and written representations that no other reports were required, during the fiscal year ended December 31, 2007 all Section 16(a) filing requirements applicable to our officers, directors and greater than 10% beneficial owners were complied with except as noted below:

As of December 31, 2007, there was one Form 4 filed late by Dr. K. C. Park and Susan K. Jones filed a Form 5 as a result of certain unfiled Form 4 filings.

General Information Concerning the Board of Directors

The Board of Directors of eMagin is classified into three classes: Class A, Class B and Class C. As of September 30, 2008, Irwin Engelman is the only Class A Director, and will hold office until the next Annual Meeting of our stockholders. Paul Cronson, Admiral Thomas Paulsen, and General Stephen Seay are Class B directors who will hold office until the 2009 Annual Meeting. Claude Charles and Dr. Jacob Goldman are Class C directors who will hold office until the next Annual Meeting. There was no Annual Meeting held during 2007. In each case, each director will hold office until his successor is duly elected or appointed and qualified in the manner provided in our Amended and Restated Certificate of Incorporation and our Amended and Restated Bylaws, or as otherwise provided by applicable law.

Our Board of Directors held 20 meetings during 2007. Our independent directors met in executive session on a periodic basis in connection with regular meetings, as well as in their capacity as members of our Audit Committee and Compensation Committee.

Compensation of Directors

Non-management directors receive options under the Company's stock option plan. A grant of options to purchase 15,000 shares of common stock will automatically be granted on the date a director is first elected or reelected or otherwise validly appointed to the Board with an exercise price per share equal to 100% of the market value of one share on the date of grant. Such options granted will expire ten years after the date of grant and will become exercisable on December 31 of the year granted. For calendar years 2007 and 2008, Directors shall receive an annual cash retainer of \$10,000 and an annual stock retainer of 25,000 options at market price on the date of issuance that will become fully exercisable on December 31 of the year granted. Directors are also granted options based on committee assignments consisting of options to purchase 5,000 shares per year for members of the compensation committee, 10,000 shares for the governance committee and 15,000 shares for the audit committee. Each committee chair will receive 5,000 additional shares. The governance and audit committee chairs will each receive an additional 10,000 option shares. In addition, each non-management director receives \$1,000 for each in-person Board meeting, and \$500 for each teleconference meeting or Committee meeting. Directors are eligible for reimbursement for ordinary expenses incurred in connection with attendance at such meetings.

The Audit Committee is responsible for determining the adequacy of our internal accounting and financial controls, supervising matters relating to audit functions, reviewing and setting internal policies and procedures regarding audits, accounting and other financial controls, reviewing the results of our audit performed by the independent public accountants, and recommending the selection of independent public accountants. The Audit Committee has adopted

an Audit Charter, which is posted on our website at <http://www.emagin.com/investors>. The Audit Committee is composed of three Directors, Claude Charles, Irwin Engelman, and Adm. Stephen Seay. The Board has determined that each of the members of the Audit Committee is unrelated, an outside member with no other affiliation with us and is independent. The Board has determined that Mr. Engelman is an “audit committee financial expert” as defined by the SEC. During 2007, the Audit Committee held 5 meetings via teleconference.

Compensation Committee. The Compensation Committee determines matters pertaining to the compensation and expense reporting of certain of our executive officers, and administers our stock option, incentive compensation, and employee stock purchase plans. The Compensation Committee is presently composed of three Directors, Jack Goldman, Thomas Paulsen, and Stephen Seay, each of whom the Board has determined to be independent and none of whom has been an employee of the Company. During 2007, the Compensation Committee held 4 meetings in person or through a conference call.

Governance and Nominating Committee. The Governance and Nominating Committee is responsible for considering potential Board members, nominating Directors for election to the Board, implementing the Company’s corporate governance and ethics policies, and for all other purposes outlined in the Governance and Nominating Committee Charter, which is posted on our website at <http://www.emagin.com/investors>. The Governance and Nominating Committee is composed of Jack Goldman and Thomas Paulsen, each of whom the Board has determined to be independent. During 2007, the Governance and Nominating Committee held 1 meeting.

Nomination of Directors

As provided in its charter and our company's corporate governance principles, the Governance and Nominating Committee is responsible for identifying individuals qualified to become directors. The Governance and Nominating Committee seeks to identify director candidates based on input provided by a number of sources, including (1) the Governance and Nominating Committee members, (2) our other directors, (3) our stockholders, (4) our Chief Executive Officer or Chairman, and (5) third parties such as professional search firms. In evaluating potential candidates for director, the Nominating and Corporate Governance Committee considers the entirety of each candidate's credentials.

Qualifications for consideration as a director nominee may vary according to the particular areas of expertise being sought as a complement to the existing composition of the Board of Directors. However, at a minimum, candidates for director must possess:

- high personal and professional ethics and integrity;
- the ability to exercise sound judgment;
- the ability to make independent analytical inquiries;
- a willingness and ability to devote adequate time and resources to diligently perform Board and committee duties; and
- the appropriate and relevant business experience and acumen

In addition to these minimum qualifications, the Governance and Nominating Committee also takes into account when considering whether to nominate a potential director candidate the following factors:

- whether the person possesses specific industry expertise and familiarity with general issues affecting our business;
- whether the person's nomination and election would enable the Board to have a member that qualifies as an "audit committee financial expert" as such term is defined by the Securities and Exchange Commission (the "SEC") in Item 401 of Regulation S-K;
- whether the person would qualify as an "independent" director under the listing standards of the OTC Bulletin Board;
 - the importance of continuity of the existing composition of the Board of Directors to provide long term stability and experienced oversight; and
- the importance of diversified Board membership, in terms of both the individuals involved and their various experiences and areas of expertise.

EXECUTIVE COMPENSATION

COMPENSATION DISCUSSION AND ANALYSIS

This section describes the compensation program for our executive officers. In particular, this section focuses on our 2007 compensation program and related decisions.

Compensation Discussion and Analysis

The objectives of our compensation program are as follows:

- Reward performance that drives substantial increases in shareholder value, as evidenced through both future operating profits and increased market price of our common shares; and
- Attract, hire and retain well-qualified executives.

The compensation level of our executives generally reflects their unique position and incentive to positively affect our future operating performance and shareholder value. Part of the compensation of our executives is from equity compensation, primarily through stock option grants or restricted stock awards. The stock option exercise price is generally the fair market value of the stock on the date of grant. Therefore, a gain is only recognized if the value of the stock increases, which promotes a long term alignment between the interests of the Company's executives and its shareholders. For that reason, stock options are a component of 100% of our employees' salary package.

Specific salary and bonus levels, as well as the amount and timing of equity incentive grants, are determined informally and judgmentally, on an individual-case basis, taking into consideration each executive's unique talents and experience as they relate to our needs. Executive compensation is paid or granted pursuant to each executive's compensation agreement. Compensation adjustments are made occasionally based on changes in an executive's level of responsibility or on changed local and specific executive employment market conditions.

The Board of Directors has established a Compensation Committee, comprised exclusively of independent outside directors which approves all compensation and awards to executive management. The members of the Compensation Committee have extensive executive level experience in other companies and bring a perspective of reasonableness to compensation matters with our Company. In addition, the Compensation committee compares executive compensation practices of similar companies at similar stages of development.

Generally on its own initiative, at least annually, the Compensation Committee reviews the performance of executives and establishes compensation levels based on the performance evaluation, historical compensation levels of the executives, levels of responsibility and contributions to the Company, and comparable position studies provided by independent sources. With respect to equity compensation, the Compensation Committee approves all option grants, generally based on the recommendation of the president and chief executive officer and has delegated granting authority to the president and chief executive officer or, on occasion, his designee. Executives are eligible to receive bonus compensation at the discretion of the Compensation Committee, which is primarily based on the achievement of certain goals and objectives and the executive's contributions to the Company. Executives also are entitled to participate in the same benefit plans that are available to other Company employees.

Compensation for the Chairman

From January through May 2008, Admiral Paulsen served as Interim Chief Executive Officer. Admiral Paulsen receives an annual stipend of \$60,000 for serving as Non-Executive Chairman of the Board. No change occurred in Admiral Paulsen's compensation as a director of the Company as a result of his accepting the temporary position of Interim Chief Executive Officer and President.

Summary Compensation Table

The following table sets forth information regarding compensation paid to our principal executive officer, principal financial officer, and our highest paid executive officer, all of whose total annual salary and bonus for the years ended December 31, 2007, 2006 and 2005 exceeded \$100,000.

SUMMARY COMPENSATION TABLE

Name and principal position	Year	Salary (\$)	Bonus (\$)	Stock Awards (\$)	Option awards (\$), (a)	Non-equity incentive plan compensation (\$)	Change in pension value and non qualified deferred compensation (\$)	All Other Compensation (\$)	Total (\$)
K.C. Park, Interim President and Chief Executive Officer (1)	2007	313,462	-	40,000 (4)	-	-	-	-	353,462
	2006	200,000	-	-	-	-	-	-	-

Susan Jones, Executive Vice President, Chief Marketing	2007	278,888	-	-	-	-	-	175,184 (8)	454,072

and
Strategy
Officer, and
Secretary

2006	289,163	-	-	-	-	-	81,379	(8)	370,542
2005	259,568	26,049	-	316,240	-	-	26,049	(8)	627,906

(1) Dr. Park was appointed Interim President and Chief Executive Officer in January 2007 and resigned his post in January 2008. Prior to January 2007, Dr. Park served as Executive Vice President of International Operations.

(2) Mr. Jones resigned as President and Chief Executive Officer in January 2007.

(3) Mr. Atherly resigned as Chief Financial Officer in January 2008.

(4) This amount represents a retention bonus in the form of a stock grant that was issued to the named executive officer.

(5) This amount represents a payment in the form of a stock grant pursuant to Mr. Jones' severance agreement. Previously granted options that remained unexercised were also forfeited pursuant to the severance agreement.

(6) This amount represents legal and accounting fee reimbursement for the benefit of the named executive officer.

(7) This amount represents relocation expense reimbursement for the benefit of the named executive officer.

(8) This amount represents deferred dollar amount earned in sales incentive compensation by the named executive officer.

Column note:

(a) The amounts in this column represent the fair value of option awards to the named executive officer as computed on the date of the option grants using the Black-Scholes option-pricing model.

Grants of Plan-Based Awards

There were no grants of plan-based awards to named executive officers for the year ended December 31, 2007.

Outstanding Equity Awards at Fiscal Year-End

The following table sets forth information with respect to the outstanding equity awards of our principal executive officers and principal financial officer during 2007, and each person who served as an executive officer of eMagin Corporation as of December 31, 2007:

Name and principal position	OUTSTANDING EQUITY AWARDS AT YEAR-END Option awards					Stock awards		Equity incentive plan awards:	
	Number of securities underlying unexercised options (#)	Number of securities underlying unexercised options (#)	Equity incentive plan awards: Number of securities underlying unexercised options	Options exercise price	Option expiration	Number of shares or units of stock that have not vested	Market value of shares or units of stock that have not vested	Equity incentive plan awards: Number of unearned shares other than rights that have not vested	Market or payout value of unearned shares, units or other rights that have not vested
	Exercisable	Unexercisable	(#), (a)	(\$)	Date	(#)	(\$)	(#)	(\$)
K.C. Park, Interim President and Chief Executive Officer (1)	465	-	465	2.60	July 21, 2008	-	-	-	-

	16,250	-	16,250	2.60	March 17, 2012				
	11,700	-	11,700	2.60	November 30, 2012				

OUTSTANDING EQUITY AWARDS AT YEAR-END (cont.)

Name and principal position	Option awards					Stock awards			
	Number of securities underlying unexercised options (#)	Number of securities underlying unexercised options (#)	Equity incentive awards: Number of securities underlying unexercised options (#), (a)	Options exercise price (\$)	Option expiration date	Number of shares or units of stock that have not vested (#)	Marketplan awards: value of shares or units of stock that have not vested (\$)	Equity incentive awards: Number of unearned shares or units that have not vested (#)	Equity incentive awards: Market or payout value of unearned shares or units that have not vested (\$)
Susan Jones, Executive Vice President, Chief Marketing and Strategy Officer, and Secretary	48,750	-	48,750	2.60	May 17, 2009	-	-	-	-
	16,770	-	16,770	2.60	January 11, 2010				
	9,685	-	9,685	2.60	January 11, 2010				
	16,250	-	16,250	2.60	March 17, 2010				
	11,700	-	11,700	2.60	November 30, 2012				
	11,932	-	11,932	2.60	April 24, 2013				
	7,159	-	7,159	2.60	August 30, 2013				
	7,159	-	7,159	2.60	December 1, 2013				

(1) Dr. Park was appointed Interim President and Chief Executive Officer in January 2007 and resigned his post in January 2008.

(2) Mr. Atherly resigned as Chief Financial Officer in January 2008 and has forfeited all options shown above.

(3) 25,000 options subject to vesting when the Company completes four consecutive EBITDA positive quarters.

Column note:

On November 3, 2006, a reverse stock split, ratio of 1-for-10, became effective. All stock options presented reflect the stock split.

(a) The options in this column were repriced. On July 21, 2006, certain employees agreed to cancel a portion of their existing stock options in return for repricing the remaining stock options at \$2.60 per share. The repriced unvested options continued to vest on the original schedule.

Option Exercises and Stock Vested

No executive officer identified in the Summary Compensation Table above exercised an option in fiscal year 2007. There were no shares of stock awarded or vested with respect to any of those executive officers.

Pension Benefits

eMagin does not have any plan which provides for payments or other benefits at, following, or in connection with retirement.

Non-qualified Deferred Compensation

eMagin does not have any defined contribution or other plan which provides for the deferral of compensation on a basis that is not tax-qualified.

Employment Agreements

Effective January 1, 2006, the Company entered into a revised executive employment agreement with Susan K. Jones, Chief Marketing and Strategy Officer. The agreement is effective for an initial term of three years. The agreement provides for an annual salary, benefits made available by the Company to its employees and eligibility for an incentive bonus pursuant to one or more incentive compensation plans established by the Company from time to time. The Company may terminate the employment of Ms. Jones at any time with or without notice and with or without cause (as such term is defined in the agreements). If Ms. Jones' employment is terminated without cause, or if Ms. Jones resigns with good reason (as such term is defined in the agreements), or Ms. Jones' position is terminated or significantly changed as result of change of control (as such term is defined in the agreements), Ms. Jones shall be entitled to receive salary until the end of the agreement's full term or twelve months, whichever is greater, payment for accrued vacation, and bonuses which would have been accrued during the term of the agreement. If Ms. Jones voluntarily terminates employment with the Company, other than for good reason or is terminated with cause (as such term is defined in the agreement), she shall cease to accrue salary, vacation, benefits, and other compensation on the date of the voluntary or with cause termination. The Executive Employment Agreement includes other conventional terms and also contains invention assignment, non-competition, non-solicitation and non-disclosure provisions. On April 17, 2006, the parties entered into amendments to the employment agreements pursuant to which the parties clarified that the Company has agreed to pay for health benefits equivalent to medical and dental benefits provided during Ms. Jones' full time employment until the end of the agreement's full term or twenty-four (24) months, whichever is greater.

Effective January 30, 2008, the Company entered into an amended employment agreement with Susan K. Jones, Chief Business Officer. The amended agreement provides for an annual base salary of \$315 thousand, an extension of the term of the agreement to January 31, 2010, modification and clarification of the basis for the incentive component of her salary, and extension of the change-of-control/material change/termination-without-cause compensation payout periods to the greater of 18 months or the remaining term of the amended employment agreement.

On January 11, 2007, Dr. K.C. Park was appointed Interim Chief Executive Officer, President, and a Director of the Company. On February 12, 2007, the Company entered in a Compensation Agreement ("the Agreement") with Dr. Park. Under the Agreement, the Company has agreed to pay Dr. Park an annual base salary equal to \$300 thousand plus a quarterly increase in his base salary in the amount of \$12.5 thousand per fiscal quarter through December 31, 2007. The Company agreed to issue Dr. Park an aggregate of 250,000 restricted shares of common stock within 10 business days of the completion of a change of control of the Company. In addition, if a change of control transaction is completed and Dr. Park is not offered a senior executive position in the new organization, the Company has agreed to pay Dr. Park three month's salary. On January 31, 2008, Dr. Park resigned his positions as Interim Chief Executive Officer, President and Director.

Effective April 2, 2008, Mr. Campbell is serving as the Company's Chief Financial Officer pursuant to an agreement between the Company and Tatum, dated April 2, 2008 (the "Tatum Agreement"). Pursuant to the Tatum Agreement, for a minimum term of three months, Mr. Campbell will be paid a salary of \$24,500 per month and the Company will also pay Tatum a fee of \$10,500 per month plus \$300 per business day. Either party may terminate the Tatum Agreement by providing the other with at least 30 days notice.

Potential Payments Upon Termination or Change-in-Control

The following table sets forth information regarding potential payments and benefits Ms. Jones would receive upon termination of employment under specified circumstances, assuming that the triggering event in question occurred on December 31, 2007, the last business day of the fiscal year:

Name	Voluntary Resignation w/o Good Reason	Voluntary Resignation for Good Reason	Involuntary Termination without Cause	Involuntary Termination with Cause	Involuntary Termination with a Change in Control
Susan Jones					
Cash severance	\$ —	\$ 566,860(1)	\$ 566,860(1)	\$ —	\$ 566,860(1)
Post-termination health and welfare	\$ —	\$ —	\$ 11,988(2)	\$ —	\$ —
Vesting of stock options	\$ —	\$ —	—(3)	\$ —	—(3)

(1) This amount reflects the lump sum that is payable within thirty days of the triggering event to the named executive. All calculations were made as of December 31, 2007 using then current salary figures for the named executive.

(2) This amount reflects the COBRA payments for health and dental benefits that eMagin would make on behalf of the named executive.

(3) This amount would reflect the value of the stock option awards that were unvested as of December 31, 2007 which would accelerate and vest under the terms of eMagin's option plans following a triggering event. As of December 31, 2007, all stock options were fully vested.

Director Compensation Arrangements

The following table sets forth with respect to the named director, compensation information inclusive of equity awards and payments made in the year ended December 31, 2007. The table includes only directors that were not employees of eMagin Corporation. Any director who was also an executive officer is included in the Summary Compensation Table.

DIRECTOR COMPENSATION

Name	Fees earned or paid in cash(\$)	Stock awards (\$)	Option awards(\$)	Non-equity incentive plan compensation(\$)	Change in pension value and nonqualified deferred compensation earnings(\$)	All other compensation (\$)	Total(\$)
Claude Charles	8,000	-	42,932	-	-	-	50,932
Paul Cronson	8,000	-	40,228	-	-	-	48,228
Irwin Engelman	8,000	-	33,924	-	-	-	41,924
Jack Goldman	8,000	-	42,139	-	-	-	50,139
Thomas Paulsen	66,672	-	41,184	-	-	-	107,856
Stephen Seay	8,000	-	32,586	-	-	-	40,586

The following table sets forth information with respect to the outstanding equity awards of our directors as of December 31, 2007:

Column note:

On November 3, 2006, a reverse stock split, ratio of 1-for-10, became effective. All stock options presented reflect the stock split.

Compensation Committee Interlocks and Insider Participation

None of the members of our Compensation Committee has been an officer or employee of eMagin during years ending December 31, 2005, 2006 and 2007. In addition, during the most recent fiscal year, no eMagin executive officer served on the Compensation Committee (or equivalent), or the Board, of another entity whose executive officer(s) served on our Compensation Committee or Board. On January 31, 2008, Dr. K.C. Park resigned as our Interim Chief Executive Officer and President; and Thomas Paulsen, a director and Chairman of both the Board of Directors and the Compensation Committee, assumed that role on an interim basis until June 1, 2008 when Andrew G. Sculley, Jr. joined the Company as Chief Executive Officer and President. No change in Admiral Paulsen's compensation as a director of the Company occurred as a result of his accepting the temporary position of Interim Chief Executive Officer and President.

Compensation Committee Report

The Committee has reviewed the Compensation Discussion and Analysis and discussed that analysis with management. Based on its review and discussions with management, the Committee recommended to the Board that the Compensation Discussion and Analysis be included in eMagin's 10-K. This report is provided by the following independent directors, who comprise the Committee:

Thomas Paulsen (Chairman)
Jacob Goldman
Stephen Seay

SECURITY OWNERSHIP OF CERTAIN BENEFICIAL OWNERS AND MANAGEMENT

Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The following table sets forth the number of shares known to be owned by all persons who own at least 5% of eMagin's outstanding common stock, the Company's directors, the executive officers, and the directors and executive officers as a group as of January 5, 2009, unless otherwise noted. Unless otherwise indicated, the stockholders listed in the table have sole voting and investment power with respect to the shares indicated.

Name of Beneficial Owner	Common Stock Beneficially Owned	Percentage of Common Stock
Moriah Capital L.P. (1)	2,017,500	5.4%
Stillwater LLC (2)	13,137,958	35.2%
Alexandra Global Master Fund Ltd (3)	3,438,569	9.2%
Ginola Limited (4)	5,079,856	13.6%
Susan K Jones (5)	683,465	1.8%
Rainbow Gate Corporation (6)	1,951,037	5.2%
Kettle Hill (7)	1,467,662	4.0%
Paul Cronson (8)	568,682	1.5%
Claude Charles (9)	105,400	*
Jack Goldman (10)	103,727	*
Thomas Paulsen (11)	92,101	*
Irwin Engelman(12)	90,076	*
Stephen Seay(13)	77,800	*
Andrew G. Sculley (14)	166,667	*
All executive officers and directors as a group (consisting of 8 individuals) (15)	1,887,918	4.4%

*Less than 1% of the outstanding common stock

** Beneficial Ownership is determined in accordance with the rules of the Securities and Exchange Commission and generally includes voting or investment power with respect to securities. Shares of common stock subject to options, warrants, or preferred shares exercisable or convertible within 60 days of January 5, 2009 are deemed outstanding for computing the percentage of the person holding such option or warrant. Percentages are based on a total of 37,283,371 shares: 15,736,459 shares of common stock outstanding on January 5, 2009 and 21,546,912 shares issuable upon the exercise of options, warrants exercisable, and preferred shares convertible on or within 60 days of January 5, 2009, as described below.

(1) This figure represents (i) 647,500 shares owned by Moriah Capital, L.P and (ii) warrants held by Moriah Capital L.P. to purchase 1,370,000 shares. Alexandre Speaker and Greg Zilberstein exercise the shared voting power with respect to the shares.

(2) This figure represents: (i) 2,969,819 shares owned by Stillwater LLC, which includes 276,084 shares owned by Rainbow Gate Corporation, in which the sole member of Stillwater LLC is the investment manager of Rainbow Gate Corporation; (ii) warrants held by Stillwater LLC to purchase 3,853,472 shares, which includes warrants to purchase 737,620 shares held by Rainbow Gate Corporation, in which the sole member of Stillwater LLC is the investment manager of Rainbow Gate Corporation; and (iii) 6,314,667 shares of common stock underlying convertible preferred shares which includes 937,333 shares of common stock underlying convertible preferred shares held by Rainbow Gate Corporation, which the sole member of Stillwater LLC is the investment manager of Rainbow Gate Corporation. Mortimer D.A. Sackler exercises the sole voting power with respect to the shares held in the name of Stillwater LLC

as sole member, and Mortimer D.A. Sackler exercises the sole voting power with respect to the shares held in the name of Rainbow Gate Corporation as investment manager; therefore Stillwater LLC is deemed to beneficially own the shares held by Rainbow Gate as “beneficially owned” but Stillwater LLC disclaims beneficial ownership of such shares.

(3) This figure represents: (1) 420,387 shares owned by Alexandra Global Master Fund; (ii) and warrants held to purchase 3,018,182 shares. Alexandra Investment Management, LLC, a Delaware limited liability company (“AIM”), serves as investment adviser to Alexandra Global Master Fund Ltd., a British Virgin Islands company (“Alexandra”). By reason of such relationship, AIM may be deemed to share dispositive power over the shares of common stock stated as beneficially owned by Alexandra. AIM disclaims beneficial ownership of such shares of common stock. Mr. Mikhail A. Filimonov (“Filimonov”) is the Chairman, Chief Executive Officer, Chief Investment Officer and a managing member of AIM. By reason of such relationships, Filimonov may be deemed to share dispositive power over the shares of common stock stated as beneficially owned by Alexandra. Filimonov disclaims beneficial ownership of such shares of common stock.

(4) This figure represents: (i) 1,257,629 shares owned by Ginola Limited, which include 276,084 shares held indirectly by Rainbow Gate Corporation; 65,080 shares owned by Mount Union Corp.; 57,372 shares owned by Chelsea Trust Company Limited, as trustee; and 284,736 shares owned by Crestflower Corporation (Ginola Limited disclaims beneficial ownership of the shares owned by Crestflower Corporation; Mount Union Corp.; and Chelsea Trust Company Limited, as trustee); and (ii) warrants held by Ginola Limited to purchase 1,814, 227 common shares, which includes warrants to purchase 737,620 shares held by Rainbow Gate Corporation, in which the sole shareholder of Ginola Limited is also the sole shareholder of Rainbow Gate Corporation, warrants to purchase 32,540 shares owned by Mount Union Corp., 27,273 shares of common stock issuable upon exercise of a common stock purchase warrant held indirectly by Chelsea Trust Company Limited, as trustee, and 120,193 shares of common stock issuable upon exercise of common stock purchase warrant held by Crestflower Corporation (Ginola Limited disclaims beneficial ownership of the shares owned by Crestflower Corporation, Mount Union Corp. and Chelsea Trust Company Limited, as trustee); and (iii) 2,008,000 shares of common stock underlying convertible preferred shares , which includes 937 ,333 shares of common stock underlying convertible preferred shares held by Rainbow Gate Corporation, in which the sole shareholder of Ginola Limited is also the sole shareholder of Rainbow Gate Corporation. Stillwater LLC and Ginola Limited are beneficially by separate individuals and therefore do not exert voting control over one another. However, Stillwater LLC does include the shares held by Rainbow Gate as “beneficially owned” since the sole member of Stillwater LLC is investment manager and sole director of Rainbow Gate Corporation and exerts voting control over such shares but Stillwater LLC disclaims beneficial ownership of such shares. Jonathan White, Steven Meiklejohn, and Joerg Fischer exercise the shared voting power with respect to the shares held in the name of Mount Union Corp.. Stuart Baker, Joerg Fischer, Charles Lubar, Christopher Mitchell, Leslie Schreyer and Jonathan White exercise the shared voting power with respect to the shares held in the name of Chelsea Trust Company Limited. Jonathan White, Joerg Fischer and Steven Meiklejohn exercise the shared voting power with respect to the shares held in the name of Crestflower Corporation. Jonathan White, Joerg Fischer and Steven Meiklejohn are the directors of Ginola Limited and exercise the shared voting power with respect to the shares held in the name of Ginola Limited.

(5) This figure represents shares owned by Gary Jones and Susan Jones who are married to each other, including (i) 395,268 shares owned by Gary Jones and 158,792 shares owned by Susan Jones; and (ii) 129,405 shares of common stock issuable upon exercise of stock options held by Susan Jones.

(6) This figure represents (1) 276,084 shares owned by Rainbow Gate Corporation; (ii) warrants held by to purchase 737, 620 shares; and (iii) 937 ,333 shares of common stock underlying convertible preferred shares . Mortimer D.A. Sackler exercises the sole voting power with respect to the shares held in the name of Rainbow Gate Corporation but disclaims beneficial ownership of such shares.

(7) This figure represents (i) 1,227,276 shares of common stock owned by Kettle Hill of which 195, 942 shares held by Kettle Hill Partners, LP, 724,800 shares held by Kettle Hill Partners II, LP, and 306,534 shares held by Kettle Hill Offshore, Ltd. and (ii) warrants held by Kettle Hill to purchase 240,386 common shares which includes warrants to purchase 55,289 shares held by Kettle Hill Partners, LP, warrants to purchase 98,558 shares held by Kettle Hill Partners II, LP, and warrants to purchase 86,539 shares held by Kettle Hill Offshore, Ltd. Kettle Hill Capital Management, LLC acts as investment manager for Kettle Hill Partners, LP, Kettle Hill Partners II LP, and Kettle Hill Offshore, Ltd. Andrew Kurita exercises the voting power with respect to the shares.

(8) This figure represents 22,198 shares owned by Mr. Cronson, 208,235 shares underlying warrants, 70,800 shares underlying options, and 266,666 shares of common stock underlying convertible preferred shares held directly and indirectly by Paul Cronson. This includes (i) 12,097 common stock shares and 4,286 shares underlying warrants held indirectly by a family member of Paul Cronson; (ii) 4,366 shares underlying warrants held indirectly by Larkspur Corporation of which he is the Managing Director and (iii) 3,783 shares of common stock, 186,666 shares underlying warrants and 266,666 shares of common stock underlying convertible preferred shares held indirectly by Navacorp III, LLC. Mr. Paul Cronson exercises the sole voting power with respect to the shares held in the name of Larkspur Corporation, and Paul Cronson exercises the sole voting power with respect to the shares held in the name of Navacorp III, LLC.

(9) This figure represents shares underlying options.

(10) This figure represents shares underlying options.

(11) This figure represents shares underlying options.

(12) This figure represents shares underlying options.

(13) This figure represents shares underlying options.

(14) This figure represents shares underlying options.

(15) This figure represents: (i) 577,041 shares; (ii) warrants held to purchase 208,235 shares; (iii) 266,666 shares of common stock underlying convertible preferred shares ; and (iv) 835,976 shares of common stock issuable upon exercise of stock options.

Equity Compensation Plan Information

The following table sets forth the aggregate information of our equity compensation plans in effect as of December 31, 2007:

Plan	Number of securities to be issued upon exercise of outstanding options, warrants and rights	Weighted-average exercise price of outstanding options and warrants	Number of securities remaining available for future issuance under equity compensation plans excluding securities reflected in first column
Equity compensation plans approved by security holders	487,674	\$ 2.14	817,215
Equity compensation plans not approved by security holders	406,649	\$ 3.02	

TRANSFER AGENT

Our transfer agent for our common stock is Continental Stock Transfer, 17 Battery Place, New York, NY 10004.

INDEMNIFICATION FOR SECURITIES ACT LIABILITIES

Our Articles of Incorporation, as amended and restated, provide to the fullest extent permitted by Section 145 of the General Corporation Law of the State of Delaware that our directors or officers shall not be personally liable to us or our shareholders for damages for breach of such director's or officer's fiduciary duty. The effect of this provision of our Articles of Incorporation, as amended and restated, is to eliminate our rights and our shareholders (through shareholders' derivative suits on behalf of our company) to recover damages against a director or officer for breach of the fiduciary duty of care as a director or officer (including breaches resulting from negligent or grossly negligent behavior), except under certain situations defined by statute. We believe that the indemnification provisions in our Articles of Incorporation, as amended, are necessary to attract and retain qualified persons as directors and officers.

Our By Laws also provide that the Board of Directors may also authorize us to indemnify our employees or agents, and to advance the reasonable expenses of such persons, to the same extent, following the same determinations and upon the same conditions as are required for the indemnification of and advancement of expenses to our directors and officers. As of the date of this Registration Statement, the Board of Directors has not extended indemnification rights to persons other than directors and officers.

Insofar as indemnification for liabilities arising under the Securities Act of 1933 may be permitted to directors, officers or persons controlling us pursuant to the foregoing provisions, or otherwise, we have been advised that in the opinion of the Securities and Exchange Commission, such indemnification is against public policy as expressed in the Securities Act of 1933 and is, therefore, unenforceable.

PLAN OF DISTRIBUTION

We are registering the shares of common stock issuable upon exercise of the warrants and conversion of the notes to permit the resale of these shares of common stock by the holders of the warrants from time to time after the date of this prospectus. We will receive proceeds of \$480,000 from the exercise of the warrants. We will bear all fees and expenses incident to our obligation to register the shares of common stock.

The selling stockholders and any of their pledgees, donees, transferees, assignees and successors-in-interest may, from time to time, sell any or all of their shares of common stock on any stock exchange, market or trading facility on which the shares are traded or in private transactions. These sales may be at fixed prices, at prevailing market prices at the time of sale, at varying prices determined at the time of sale or negotiated prices. The selling stockholders may use any one or more of the following methods when selling shares:

- ordinary brokerage transactions and transactions in which the broker-dealer solicits investors;
- block trades in which the broker-dealer will attempt to sell the shares as agent but may position and resell a portion of the block as principal to facilitate the transaction;
- purchases by a broker-dealer as principal and resale by the broker-dealer for its account;
- an exchange distribution in accordance with the rules of the applicable exchange;
- privately negotiated transactions;
- to cover short sales made after the date that this registration statement is declared effective by the Commission;
- through the writing or settlement of options or other hedging transactions, whether through an options exchange or otherwise;
- broker-dealers may agree with the selling stockholders to sell a specified number of such shares at a stipulated price per share;
- a combination of any such methods of sale; and
- any other method permitted pursuant to applicable law.

The selling stockholders may also sell shares under Rule 144 under the Securities Act, if available, rather than under this prospectus.

Broker-dealers engaged by the selling stockholders may arrange for other brokers-dealers to participate in sales. Broker-dealers may receive commissions or discounts from the selling stockholders (or, if any broker-dealer acts as agent for the purchaser of shares, from the purchaser) in amounts to be negotiated. The selling stockholders do not expect these commissions and discounts to exceed what is customary in the types of transactions involved.

The selling stockholders may from time to time pledge or grant a security interest in some or all of the shares owned by them and, if they default in the performance of their secured obligations, the pledgees or secured parties may offer and sell shares of common stock from time to time under this prospectus, or under an amendment to this prospectus under Rule 424(b)(3) or other applicable provision of the Securities Act of 1933 amending the list of selling stockholders to include the pledgee, transferee or other successors in interest as selling stockholders under this prospectus.

In connection with the sale of our common stock or interests therein, the selling stockholders may enter into hedging transactions with broker-dealers or other financial institutions, which may in turn engage in short sales of the common stock in the course of hedging the positions they assume. The selling stockholders may also sell shares of our common stock short and if such short sale shall take place after the date that this registration statement is declared effective by the Commission, the selling stockholders may deliver these securities to close out such short sales, or loan or pledge the common stock to broker-dealers that in turn may sell these securities. The selling stockholders may also enter into option or other transactions with broker-dealers or other financial institutions or the creation of one or more derivative securities which require the delivery to such broker-dealer or other financial institution of shares offered by this prospectus, which shares such broker-dealer or other financial institution may resell pursuant to this prospectus (as supplemented or amended to reflect such transaction).

Upon us being notified in writing by a selling stockholder that any material arrangement has been entered into with a broker-dealer for the sale of common stock through a block trade, special offering, exchange distribution or secondary distribution or a purchase by a broker or dealer, a supplement to this prospectus will be filed, if required, pursuant to Rule 424(b) under the Securities Act, disclosing (i) the name of each such selling stockholder and of the participating broker-dealer(s), (ii) the number of shares involved, (iii) the price at which such the shares of common stock were sold, (iv) the commissions paid or discounts or concessions allowed to such broker-dealer(s), where applicable, (v) that such broker-dealer(s) did not conduct any investigation to verify the information set out or incorporated by reference in this prospectus, and (vi) other facts material to the transaction. In addition, upon us being notified in writing by a selling stockholder that a donee or pledgee intends to sell more than 500 shares of common stock, a supplement to this prospectus will be filed if then required in accordance with applicable securities law.

The selling stockholders also may transfer the shares of common stock in other circumstances, in which case the transferees, pledgees or other successors in interest will be the selling beneficial owners for purposes of this prospectus.

The selling stockholders and any broker-dealers or agents that are involved in selling the shares may be deemed to be “underwriters” within the meaning of the Securities Act in connection with such sales. In such event, any commissions received by such broker-dealers or agents and any profit on the resale of the shares purchased by them may be deemed to be underwriting commissions or discounts under the Securities Act. Discounts, concessions, commissions and similar selling expenses, if any, that can be attributed to the sale of securities will be paid by the selling stockholder and/or the purchasers.

We have advised each selling stockholder that it may not use shares registered on this registration statement to cover short sales of common stock made prior to the date on which this registration statement shall have been declared effective by the Commission. If a selling stockholder uses this prospectus for any sale of the common stock, it will be subject to the prospectus delivery requirements of the Securities Act unless an exemption therefrom is available. The selling stockholders will be responsible to comply with the applicable provisions of the Securities Act and Exchange Act, and the rules and regulations thereunder promulgated, including, without limitation, Regulation M, as applicable to such selling stockholders in connection with resales of their respective shares under this registration statement.

Under the securities laws of some states, the shares of common stock may be sold in such states only through registered or licensed brokers or dealers. In addition, in some states the shares of common stock may not be sold unless such shares have been registered or qualified for sale in such state or an exemption from registration or qualification is available and is complied with.

There can be no assurance that any selling stockholder will sell any or all of the shares of common stock registered pursuant to the registration statement, of which this prospectus forms a part.

Once sold under the registration statement, of which this prospectus forms a part, the shares of common stock will be freely tradable in the hands of persons other than our affiliates.

We have agreed to indemnify the selling stockholders against certain losses, claims, damages and liabilities, including liabilities under the Securities Act.

DESCRIPTION OF SECURITIES

COMMON STOCK

We are authorized to issue up to 200,000,000 shares of common stock, \$0.001 par value. As of January 5, 2009, there were 15,736,459 shares of common stock outstanding. Holders of the common stock are entitled to one vote per share on all matters to be voted upon by the stockholders. Holders of common stock are entitled to receive ratably such dividends, if any, as may be declared by the Board of Directors out of funds legally available therefor. Upon the liquidation, dissolution, or winding up of our company, the holders of common stock are entitled to share ratably in all of our assets which are legally available for distribution after payment of all debts and other liabilities and liquidation preference of any outstanding common stock. Holders of common stock have no preemptive, subscription, redemption or conversion rights. The outstanding shares of common stock are validly issued, fully paid and non-assessable.

PREFERRED STOCK

We are authorized to issue up to 10,000,000 shares of Preferred Stock, \$0.001 par value. The 10,000,000 shares of Preferred Stock authorized are undesignated as to preferences, privileges and restrictions. As the shares are issued, the Board of Directors must establish a "series" of the shares to be issued and designate the preferences, privileges and restrictions applicable to that series.

Pursuant to the Agreements entered into on July 23, 2007, as outlined above in our Recent Developments section, the Company has designated but not issued 3,198 shares of the Company's preferred stock as Series A Senior Secured Convertible Preferred Stock (the "Preferred Stock") at a stated value of \$1,000. The Preferred Stock is entitled to cumulative dividends which accrue at a rate of 8% per annum, payable on December 21, 2008. Each share of Preferred Stock has voting rights equal to (1) in any case in which the Preferred Stock votes together with the Company's Common Stock or any other class or series of stock of the Company, the number of shares of Common Stock issuable upon conversion of such shares of Preferred Stock at such time (determined without regard to the shares of Common Stock so issuable upon such conversion in respect of accrued and unpaid dividends on such share of Preferred Stock) and (2) in any case not covered by the immediately preceding clause one vote per share of Preferred Stock.

SELLING STOCKHOLDERS

The table below sets forth information concerning the resale of the shares of common stock by the selling stockholders. We will not receive any proceeds from the resale of the common stock by the selling stockholders. We will receive proceeds from the exercise of the warrants. Assuming all the shares registered below are sold by the selling stockholders, none of the selling stockholders will continue to own any shares of our common stock registered pursuant to the registration statement of which this prospectus forms a part.

The following table also sets forth the name of each person who is offering the resale of shares of common stock by this prospectus, the number of shares of common stock beneficially owned by each person based on its ownership of the shares of common stock and the warrants, as of January 5, 2009, assuming exercise of the warrants held by the selling stockholders on that date, without regard to any limitations on exercise, the number of shares of common stock that may be sold in this offering and the number of shares of common stock each person will own after the offering, assuming they sell all of the shares offered.

Except as described below the selling stockholders do not have and within the past three years have not had any position, office or other material relationship with us or any of our predecessors or affiliates.

In accordance with the terms of registration rights agreements with the holders of the shares of common stock and the warrants, this prospectus generally covers the resale of at least the sum of (i) the number of shares of common stock issued and (ii) the shares of common stock issued and issuable upon exercise of the related warrants, determined as if the outstanding warrants were exercised, as applicable, in full, as of the trading day immediately preceding the date this registration statement was initially filed with the SEC.

Name of Selling Security Holder	Beneficial Ownership Prior to Offering (1) Shares	Percentage (2)	Shares Offered (3)
Stillwater LLC (4)	13,137,958	35.2%	2,438,096
(1)	Beneficial ownership is determined in accordance with the rules of the Securities and Exchange Commission and generally includes voting or investment power with respect to securities. Shares of common stock subject to options, warrants, or debt currently exercisable or convertible, or exercisable or convertible within 60 days of January 5, 2009 are deemed outstanding for computing the percentage of the person holding such option, warrant, or debt but are not deemed outstanding for computing the percentage of any other person.		
(2)	Percentage prior to offering is based on 37,283,371 shares of common stock outstanding as of January 5, 2009 and the shares issuable upon exercise of options, warrants exercisable, and debt convertible on or within 60 days of January 5, 2009.		
(3)	Represents (i) 1,000,000 shares issuable upon the exercise of common stock purchase warrants, and (ii) 1,428,572 shares issued upon conversion of the Stillwater Note (as described herein) representing \$500,000 of the principal amount of the Stillwater Note, and (iii) 9,524 shares issued for accrued and unpaid interest under the Stillwater Note.		
(4)	On July 23, 2007 Stillwater elected to convert \$252,166.50 of the Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note due on July 23, 2007 and \$2,166.50 of accrued and unpaid interest into shares of common stock. Stillwater received 720,476 shares of common stock at the conversion price of \$0.35 pursuant to the terms of the Stillwater Note. On December 22, 2008 Stillwater elected to convert the \$251,166.67 of the remaining Stillwater Note representing \$250,000 of the principal amount of the Stillwater Note due on December 21, 2008 and \$1,166.67 of accrued and unpaid interest into shares of common stock. Stillwater received 717,620 shares of the common stock at the conversion price of \$0.35 pursuant to the terms of the Stillwater Note.		

Additional Disclosures

The following "Additional Disclosures" are disclosures as of March 2007.

Stillwater Note - Conversion Price

With respect to the shares being registered pursuant to this registration statement, the conversion price was based on the average closing price of our stock on the five trading days prior to the March 28, 2007 agreement. Those prices were \$.40, \$.34, \$.33, \$.33 and \$.34, respectively, or an average of \$.35 per share. The \$500,000 principal of the Stillwater Notes was converted into 1,428,572 shares of common stock at \$.35 per share. The number of warrants issued was established at 70% of the underlying conversion shares. The Stillwater Notes allowed the investor at the time of conversion to also convert any outstanding interest into shares of common stock. Interest was to be paid quarterly therefore the maximum outstanding interest would be three months interest on \$500,000 or at 6% per annum \$7,500. This interest could be converted into 21,429 shares of common stock at the \$.35 conversion price if the principal is converted and such interest is accrued and unpaid at the time of conversion of principal. As disclosed above, a total of \$3,333.17 of accrued and unpaid interest consisting of \$2,116.50 of accrued and unpaid interest converted into shares of common stock on July 23, 2007 and \$1,166.67 of accrued and unpaid interest converted into shares of common stock on December 22, 2008 was converted into a total of 9,524 shares of common stock pursuant to the Stillwater Note.

Shares underlying conversion rights	1,428,572
Shares underlying warrants	1,000,000
Shares underlying interest conversion	9,524
Total shares to register	2,438,096

Payments to be made in connection with the transaction - Stillwater Note

In connection with the transaction, below is a disclosure of the dollar amount of each payment (including the value of any payments to be made in common stock) in connection with the transaction that the Company has made or may be required to make to the selling stockholder, any affiliate of the selling stockholder, or any person with whom any selling shareholder has a contractual relationship regarding the transaction (including any interest payments, liquidated damages, payments made to "finders" or "placement agents," and any other payments or potential payments):

Fees	Amount (\$)
Accounting Fees (1)	25,000
SEC Registration Fees (2)	113
Legal Fees (3)	65,000
Roth Capital (4)	35,000
Total	125,113

(1) Represents the estimated amount of services by the Company's auditors, Eisner LLP, in connection with services rendered for this transaction.

(2) Represents the Company's previously paid filing fees in connection with the registration statement.

(3) Amount represents estimated fees. As of the date of the filing of this registration statement, \$33,000 in legal fees have been incurred.

(4) Represents the placement agent fee.

Potential Total Profit to the Selling Stockholders from the Secured Convertible Debentures - [Stillwater Note](#)

Below is the total possible profit the selling stockholder could realize as a result of the conversion discount for the securities underlying the convertible note, along with the following information:

- the market price per share of the securities underlying the convertible note on the date of the sale of the convertible note;
- the conversion price per share of the underlying securities on the date of the sale of the convertible note;
- the total possible shares underlying the convertible note (assuming no interest payments and complete conversion throughout the term of the note);
- the combined market price of the total number of shares underlying the convertible note, calculated by using the market price per share on the date of the sale of the convertible note and the total possible shares underlying the convertible note;
- the total possible shares the selling stockholder may receive and the combine conversion price of the total number of shares underlying the convertible note; and
- the total possible discount to the market price as of the date of the sale of the convertible note.

Market Price Per Share of Securities	Conversion Price Per Share of Underlying Securities	Total Possible Shares Underlying The Convertible Debentures (1)	Market Value (Market Price Per Share Total Possible Shares) (1)	Conversion Value of the Total Number Shares Underlying The Convertible Debentures	Total Possible Discount To Market Price as of The Date of Sale of The Convertible Note (1)
\$ 0.46	\$ 0.35	1,428,572	\$ 657,143	\$ 500,000	\$ 157,143

(1) The Secured Convertible Debenture contains a reset provision, in that the conversion price of the convertible debenture shall be lowered in the event that we issue shares of common stock, or securities convertible into shares of common stock, at a lower price than the then current conversion price. As of the date of the filing of this registration statement, the conversion price of the convertible debenture has not been reduced as a result of any stock issuances or the issuances of any securities convertible into shares of common stock, at a lower price than the current conversion price.

Potential Profit to be Realized as a Result of any Conversion Discounts Held by the Selling Stockholder

The below table discloses the total possible profit to be realized as a result of any conversion discounts for securities underlying any other warrants, options, notes, or other securities of the registrant that are held by the selling stockholder or any affiliates of the selling stockholder, excluding the Stillwater Note disclosed above, along with:

- the market price per share of the underlying securities on the date of the sale of that other security;
- the conversion/exercise price per share as of the date of the sale of that other security;
- the combined market price of the total number of underlying shares, calculated by using the market price per share on the date of the sale of that other security and the total possible shares to be received;
- the total possible shares to be received and the combined conversion price of the total number of shares underlying the other security calculated by using the conversion price on the date of the sale of that other security and the total possible number of underlying shares; and

the total possible discount (premium) to the market price as of the date of the sale of that other security, calculated by subtracting the total conversion/exercise price on the date of the sale of that other security from the combined market price of the total number of underlying shares on that date:

- the market price per share of the underlying securities on the date of the sale of that other security;
- the conversion/exercise price per share as of the date of the sale of that other security;
- the combined market price of the total number of underlying shares, calculated by using the market price per share on the date of the sale of that other security and the total possible shares to be received;
- the total possible shares to be received and the combined conversion price of the total number of shares underlying the other security calculated by using the conversion price on the date of the sale of that other security and the total possible number of underlying shares; and
- the total possible discount (premium) to the market price as of the date of the sale of that other security, calculated by subtracting the total conversion/exercise price on the date of the sale of that other security from the combined market price of the total number of underlying shares on that date:
