Credit growth has slowed but expected to remain moderate

## **Economic environment outlook**

Business conditions expected to remain relatively favourable across the Group:

Overall sustained income and credit growth, albeit at a bit slower. Slightly higher unemployment & inflation. Monetary conditions remain about neutral .

GDP growth is forecast to be 2% in Australia, 2.75% in the UK and 3% in New Zealand in the 2004/05 bank year.

In Australia, some moderation in domestic activity (largely household spending) offset by a pick up in exports.

In NZ, domestic conditions are forecast to moderate significantly during the next year due to tighter financial conditions & slower immigration.

In the UK, business activity is expected to ease back to trend reflecting some moderation in household spending & external demand.

**Macro Risks**

**Geo politics** - Both political, oil & trade tensions overhang the outlook.

**Unbalanced global growth** Much still depends on the US & Asia. Continental Europe continues to lag.

**Australia, New Zealand and UK household leverage** Increased household gearing, low savings and expensive housing leaves some consumers vulnerable to higher interest rates & sustained loss of jobs.

**Financial instability** As interest rates rise to more normal levels, some asset valuations may become volatile & lead to instability amongst investors and institutions.

**Oil prices** - Sustained high prices would prove a headwind to the global recovery under way.
