

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

DNP SELECT INCOME FUND INC
Form N-30B-2
May 26, 2005

Dear Fellow Shareholders:

Performance Review: On a long-term basis, as of March 31, 2005, your Fund had a three-year cumulative total return of 20.3%. In comparison, the S&P Utilities Index had a total return during that period of 12.1%, while a composite of the S&P Utilities Index and the Lehman Utility Bond Index, reflecting the stock and bond ratio of the Fund, had a total return of 13.9%.

Your Fund had a total return (market price change plus income) of -8.4% for the quarter ended March 31, 2005. In comparison, the S&P Utilities Index had a total return of 5.4%. A composite of the S&P Utilities Index and the Lehman Utility Bond Index, reflecting the stock and bond ratio of the Fund, had a total return of 4.1%.

During the first quarter of 2005, your Fund paid three monthly 6.5 cent dividends. The 6.5 cent per share monthly rate, without compounding, would be 78 cents annualized, or a 7.27% common stock dividend yield based on the March 31, 2005 closing price of \$10.73 per share. That yield compares favorably with the quarter-end yields of 3.13% on the Dow Jones Utility Index and 3.38% on the S&P Utilities Index. Please see the Board of Directors meeting section below for more information.

There are a number of reasons why your Fund was unable to produce a positive total return during the first quarter of 2005. As you know, the primary objective of your Fund is current income. For this reason, your Fund managers seek to invest in companies that have the ability to consistently pay and grow their dividends. During the month of March, the utility stocks that performed best were companies that are recovering from previous strategic or financial missteps and currently pay smaller or no dividends, and companies that are benefiting from temporary, volatile commodity price increases, which alone does not increase their prospect for consistently paying and growing dividends in the future. Your Fund was not invested in those companies and, as a result, underperformed the utilities sector indexes.

A further reason for your Fund's lower returns during March was the result of selling pressure on Fund shares over a two day period. Three close but different levels of stop loss orders created the pressure. A stop loss order is an instruction by an investor to a broker to sell a stock when a certain price is reached. Sequential stop loss orders can be triggered in a short time on a relatively small initial decline in price. The small steps of repeated orders resulted in a significant decline in the Fund's stock price unrelated to the price of the utility indexes or their component companies.

As part of the review of our investment process, each year Fund analysts prepare industry reviews and outlooks for presentation to the Board of Directors. These reviews bring into focus certain factors affecting the utility and REIT industries' operating and financial performance. Following are highlights from those reviews.

Telecommunications--Adapting to Changing Industry Conditions: Two key growth areas for the telecommunications industry, wireless telephony and broadband services, have been and will continue to be important to telecom companies around the world. Wireless penetration rates are high in many developed countries, but the United States lags, indicating there is still plenty of room for growth in the domestic wireless sector. Outside the U.S., the growth story is less about increasing subscribers and more about increasing usage, which is significantly less than in the U.S. Further, wireless data use is in its

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

infancy in the U.S. and should add a second leg to the growth story.

Broadband is also a major focus of telecom companies globally. In the U.S., telecom company digital subscriber lines (DSL) have more than doubled in two years. Bundling (the attractive pricing of several services

to a single customer) broadband together with local telephone service is helping to drive this growth. Bundling is also important because it helps retain customers and increases the average revenue per customer. Longer term, retaining broadband customers is key because they are the ones most likely to take new services, such as video, from telecom companies when such services are offered in the next year or two.

Globally, the traditional consumer wireline telephone business remains under competitive pressure. The pressure began a few years ago with a Federal Communications Commission (FCC) ruling that allowed competitors to resell the incumbent Bell companies' own lines at big discounts. Recent court rulings and regulatory changes have reduced that threat. However, substitution of wirelines with wireless and voice over Internet protocol (VoIP) is emerging as important competition for the Bells. At present, there are fewer than one million VoIP customers in the U.S., but cable companies are beginning to offer VoIP products and will no doubt take customers from the Bells in the coming years. However, the fact that the Bells are in most cases the leading wireless providers and are rapidly growing their broadband base will partly offset the impact of pressure from cable companies.

While all had been quiet on the communications mergers and acquisition front for a few years, consolidation definitely has made a comeback. We believe consolidation is good for the wireless industry, as it should lead to more stable pricing, better margins, and less capital spending on what would otherwise be duplicate networks. Likewise, consolidation is needed in the long distance business. We have questioned for some time the viability of the long distance companies on a stand-alone basis. The primary reasons for the mergers and acquisitions include network synergies, significant cost savings, migration of voice to an Internet data network, and increased wireless spending by business enterprises. Hopefully, consolidation will also result in less price pressure and more stability in what has been a very volatile market.

Despite the competitive challenges to the traditional telecommunication service providers, cash generation remains robust. Shareholders have benefited in the form of increasing dividends, a trend we expect to continue. For DNP shareholders, investment in these companies provides value through dividend income and the growth of that income. Therefore, we anticipate continued participation in incumbent telecom companies around the world.

Electric Utilities--Dividend Growth is Back: During 2004 and into 2005, the electric utility industry has been dominated by news of rising interest rates and increasing commodity prices. On the surface, rising rates and high commodity prices might give utility investors reason for caution. However, the "measured pace" of interest rate increases by the Federal Reserve, and favorable business positions of many companies have provided comfort to utility investors and shifted their focus to the improving industry fundamentals.

Many electric companies have not been materially impacted by higher commodity prices. Long-term contracts, hedging activities, and state regulated cost recovery programs have enabled some companies to neutralize the impact of higher coal and gas costs. Companies affected the most by high commodity prices have been those with newly constructed non-regulated gas-fired plants. These plants have been uneconomic because high gas costs offset the potential financial benefits of higher electricity prices. However, several companies

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

with uncommitted output from low cost nuclear and coal plants have been able to benefit financially from the higher level of electricity prices. We expect the high commodity price environment to persist in 2005.

Congress failed to pass comprehensive energy legislation in 2004. But the electric component of the energy bill is still alive and there is some possibility for legislation in 2005. We believe that the bill would spur much needed investment in the electric transmission system and lead to improved system reliability.

2

Important for investors, 2004 was the year that utility managements' "back to basics" strategies literally began to pay dividends. In general, management focus was, and continues to be, on core-regulated operations. With non-core and frequently less profitable activities minimized, only modest ongoing levels of construction spending planned, and generally positive regulatory decisions for rate increases received, many companies chose to return excess cash to investors. During 2004, common stock dividend rates were significantly increased. In fact, more than ten companies implemented double digit dividend increases, and three companies actually increased their dividends twice during the year. We will continue to position our electric holdings to take advantage of the improved dividend environment.

Natural Gas Utilities--Price and Supply Remain Issues: The price of natural gas and concerns about the ability of natural gas supply to meet increasing demand dominated industry headlines in 2004. For the near- to medium-term, we believe natural gas prices are likely to remain high, and could be quite volatile, as production from existing wells wanes and additional supply is more difficult (and expensive) to come by. Over the long-term, new supply sources will develop, such as expanded and new liquefied natural gas (LNG) facilities. By first converting natural gas to a liquid for transportation, and then converting the liquid back to a gas, LNG plants make the importation of natural gas from other countries economic. Expansions of existing facilities will start to come on line in the next year or two, but new LNG facilities will take much longer to become operational. In the meantime, technological changes may allow more gas to be recovered from existing sources, unconventional supplies may be developed, and new geographic areas may be opened for exploration.

Over the past several years, local gas distribution companies have faced many of the same challenges as companies in other industries - higher expenses from pensions, health-related benefits, insurance, and security. Managements have done a good job of controlling the costs that they are able to control. Still, there has been pressure on margins because of the overhead that managements could not influence. Consequently, we expect to see more regulatory rate cases filed this year as companies seek recovery of the higher expenses they have been absorbing. We believe state regulators are well aware of the issues facing local gas utilities and will be fair in allowing rates to reflect the additional cost burdens.

The stock performance of local gas distribution utilities was not uniform in 2004. In general, the stock prices of the lowest yielding companies did better than higher yielding companies. Relative performance can be a cyclical phenomenon, and in this case the companies with lower yields tended to have greater commodity price exposure and, in a rising and volatile price environment, benefited the most. Given the Fund's income objective, we believe that it is appropriate to maintain our emphasis on low-risk companies with steady growth rates that can sustain or grow their dividends annually.

REITs--Diversification and Yield: 2004 was the eleventh year REITs have been

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

in your Fund. REITs are used to complement Fund utility equities because REIT yields are among the highest in the equity market and historically have been secure. The National Association of Real Estate Investment Trusts (NAREIT) Equity Index finished last year with a yield of 4.7%. Over the long-term, the majority of the return from the NAREIT Equity Index has been generated from income. We believe this trend will continue in the future.

REITs provide an opportunity to diversify the Fund's portfolio and reduce risk. Studies reported by Ibbotson Associates indicate that REITs provide meaningful diversification benefits to portfolios. Because REIT total returns have historically behaved differently than the returns of large stocks, small stocks, international stocks, and long-term government bonds, total portfolio return is smoothed and risk reduced with the inclusion of REITs.

3

Your Fund's REIT holdings are diversified among the 13 different property sectors that make up the REIT sector. At any given time some property types may demonstrate absolute or relative operating strength while others demonstrate absolute or relative weakness. In 2005 we are seeing a continued strengthening of fundamentals in more cyclical property sectors such as lodging, industrial, office, apartments, and self-storage. While these sectors typically benefit from an improving economy, some sectors, such as lodging and industrial, can benefit from increased business activity without significant job growth. In addition to the improvement we are seeing in the more cyclical property sectors, the strength in regional malls and shopping centers continues. Your Fund managers anticipate that REITs will continue to add value to the portfolio over the long-term.

Annual Meeting of Shareholders: Claire V. Hansen retired as a director and chairman of your Fund at the annual meeting of shareholders on May 23, 2005. Mr. Hansen, who first began work with the former Duff & Phelps Corporation in 1959, is the Fund's founding chairman and has served as chairman and director of the Fund since it was first organized in 1986. The Fund expresses its deepest appreciation for Mr. Hansen's dedicated service and distinguished leadership over the past decades and wishes him well in his retirement.

Also at that meeting Connie K. Duckworth and Carl F. Pollard were reelected as directors of the Fund. The retirement of Chairman Hansen and the renomination of only two directors reflect the Board's decision to reduce the size of the Board from nine to eight directors.

Board of Directors Meeting: At the regular May 2005 Board of Directors' meeting, the Board elected Vice Chairman Francis E. Jeffries to be the new Board Chairman. Mr. Jeffries has been a director of the Fund since its inception in 1987. The Board also declared the following monthly dividends:

Cents Per Share	Record Date	Payable Date
-----	-----	-----
6.5	June 30	July 11
6.5	July 29	August 10
6.5	August 31	September 12

The determination of the character of all Fund distributions (specifying which portion is ordinary income, qualifying dividend income, short or long term capital gains, or return of capital) is made each year-end and is reported

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

to shareholders on Form 1099-DIV, which is mailed every year in late January.

At the February 2005 meeting, the Board reviewed the Fund's dividend policy and reaffirmed the current 6.5 cents per share per month dividend rate. Interest rates remain near 40-year lows despite recent Federal Reserve actions and utility common stock dividends are well below their long-term average. Since 2004, the Fund has made increased use of realized gains to supplement its investment income and has reduced its use of short-term trading strategies designed to capture dividend income. Until the Fund utilizes all of its tax loss carryforwards, distributions to shareholders derived from realized gains will be treated as ordinary income for tax purposes. In addition, the reduced use of short-term trading strategies by the Fund has lowered the Fund's portfolio turnover rate and transaction costs. Once the Fund utilizes all of its tax loss carryforwards and, in the absence of an increase in the yields available on Fund investments and/or realizable gains on Fund investments, the Fund's dividend distributions may include a portion of non-taxable return of capital in order to maintain the dividend rate.

Automatic Dividend Reinvestment Plan and Direct Deposit Service--The Fund has a dividend reinvestment plan available as a benefit to all registered shareholders and also offers direct deposit service

4

through electronic funds transfer to all registered shareholders currently receiving a monthly dividend check. These services are offered through The Bank of New York. For more information and/or an authorization form on automatic dividend reinvestment or direct deposit, please contact The Bank of New York (1-877-381-2537 or <http://stock.bankofny.com>). Information on these services is also available on the Fund's web site at the address noted below.

Visit us on the Web--You can obtain the most recent shareholder financial reports and dividend information at our web site, <http://www.dnpselectincome.com>.

We appreciate your interest in DNP Select Income Fund Inc., and we will continue to do our best to be of service to you.

DNP SELECT INCOME FUND INC.
STATEMENT OF NET ASSETS--(Continued)
(UNAUDITED)
March 31, 2005

This security was purchased with the cash proceeds from securities loans.

The percentage shown for each investment category is the total value of that category as a percentage of the net assets applicable to common shares of the Fund.

(1)The market values for securities are determined as follows: Equity securities traded on a national securities exchange or traded over-the-counter and quoted on the NASDAQ System are valued at last sales prices. Fixed income securities and any other securities for which it is determined that market prices are unavailable or inappropriate are valued at a fair value using a procedure determined in good faith by the Board of Directors which includes the use of a pricing service. Each money market instrument having a maturity of 60 days or less is valued on an amortized cost basis, which approximates market value.

(2)At December 31, 2004, the Fund's most recent fiscal tax year end, based on a

Edgar Filing: DNP SELECT INCOME FUND INC - Form N-30B-2

tax cost of investments of \$2,776,340,015, the Fund had gross unrealized appreciation of \$365,962,302 and unrealized depreciation of \$32,560,868.
