GLOSSARY OF TERMS

The following is a list of certain industry terms used throughout this report:

Bbls	barrels
Bbls/d	barrels per day
Btu	British thermal unit, a measurement of energy
Frac spread	price differences, measured in energy units, between equivalent amounts of natural gas and natural gas liquids
Fractionation	the process by which natural gas liquids are separated into individual components
MMBtu	one million British thermal units, a measurement of energy
MMcf/d	one million cubic feet per day
NGLs	natural gas liquids
Throughput	the volume of product transported or passing through a pipeline or other facility

CAUTIONARY STATEMENT ABOUT FORWARD-LOOKING STATEMENTS

Our reports, filings and other public announcements may from time to time contain statements that do not directly or exclusively relate to historical facts. Such statements are forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. You can typically identify forward-looking statements by the use of forward-looking words, such as may, could, project, believe, anticipate, expect, estimate, potential, plan, forecast and other similar words.

All statements that are not statements of historical facts, including statements regarding our future financial position, business strategy, budgets, projected costs and plans and objectives of management for future operations, are forward-looking statements.

These forward-looking statements reflect our intentions, plans, expectations, assumptions and beliefs about future events and are subject to risks, uncertainties and other factors, many of which are outside our control. Important factors that could cause actual results to differ materially from the expectations expressed or implied in the forward-looking statements include known and unknown risks. Known risks and uncertainties include, but are not limited to, the risks set forth in Item 1A. Risk Factors in this Quarterly Report on Form 10-Q and in our Annual Report on Form 10-K for the year ended December 31, 2008, as well as the following risks and uncertainties:

the extent of changes in commodity prices, our ability to effectively limit a portion of the adverse impact of potential changes in prices through derivative financial instruments, and the potential impact of price and producers' access to capital on natural gas drilling, demand for our services, and the volume of NGLs and condensate extracted;

general economic, market and business conditions;

the level and success of natural gas drilling around our assets, the level of gas production volumes around our assets and our ability to connect supplies to our gathering and processing systems in light of competition;

our ability to grow through acquisitions, contributions from affiliates, or organic growth projects, and the successful integration and future performance of such assets;

our ability to access the debt and equity markets, which will depend on general market conditions, inflation rates, interest rates and our ability to effectively limit a portion of the adverse effects of potential changes in interest rates by entering into derivative financial instruments, and our ability to comply with the covenants to our credit agreement;

our ability to purchase propane from our principal suppliers for our wholesale propane logistics business;

our ability to construct facilities in a timely fashion, which is partially dependent on obtaining required building, environmental and other permits issued by federal, state and municipal governments, or agencies thereof, the availability of specialized contractors and laborers, and the price of and demand for supplies;

the creditworthiness of counterparties to our transactions;

weather and other natural phenomena, including their potential impact on demand for the commodities we sell and the operation of company owned and third-party-owned infrastructure;

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

changes in laws and regulations, particularly with regard to taxes, safety and protection of the environment, including climate change legislation, or the increased regulation of our industry;

our ability to obtain insurance on commercially reasonable terms, if at all, as well as the adequacy of the insurance to cover our losses;

industry changes, including the impact of consolidations, increased delivery of liquefied natural gas to the United States, alternative energy sources, technological advances and changes in competition; and

the amount of collateral we may be required to post from time to time in our transactions.

In light of these risks, uncertainties and assumptions, the events described in the forward-looking statements might not occur or might occur to a different extent or at a different time than we have described. We undertake no obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(Unaudited)

1. Description of Business and Basis of Presentation

DCP Midstream Partners, LP, with its consolidated subsidiaries, or us, we or our, is engaged in the business of gathering, compressing, treating, processing, transporting and selling natural gas, producing, transporting, storing and selling propane and transporting and selling NGLs and condensate.

We are a Delaware limited partnership that was formed in August 2005. We completed our initial public offering on December 7, 2005. Our partnership includes: our Northern Louisiana system; our Southern Oklahoma system; our limited liability company interest in Discovery Producer Services LLC, or Discovery; our Wyoming system; a 70% interest in our Colorado system; our 50.1% interest in our East Texas system (25.1% of which was acquired in April 2009); our Michigan systems (acquired in October 2008); our wholesale propane logistics business; and our NGL transportation pipelines.

Our operations and activities are managed by our general partner, DCP Midstream GP, LP, which in turn is managed by its general partner, DCP Midstream GP, LLC, which we refer to as the General Partner, which is wholly-owned by DCP Midstream, LLC. DCP Midstream, LLC and its subsidiaries and affiliates, collectively referred to as DCP Midstream, LLC, is owned 50% by Spectra Energy Corp, or Spectra Energy, and 50% by ConocoPhillips. DCP Midstream, LLC directs our business operations through its ownership and control of the General Partner. DCP Midstream, LLC and its affiliates employees provide administrative support to us and operate our assets. DCP Midstream, LLC owns approximately 38% of our partnership.

The condensed consolidated financial statements have been prepared in accordance with accounting principles generally accepted in the United States of America, or GAAP. We refer to the assets, liabilities and operations of DCP East Texas Holdings, LLC, or East Texas, prior to our acquisition of an additional 25.1% membership interest from DCP Midstream, LLC in April 2009, collectively as our predecessor. The condensed consolidated financial statements of our predecessor have been prepared from the separate records maintained by DCP Midstream, LLC and may not necessarily be indicative of the conditions that would have existed or the results of operations if our predecessor had been operated as an unaffiliated entity.

The accompanying unaudited condensed consolidated financial statements in this Quarterly Report on Form 10-Q have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission, or SEC. Accordingly, these condensed consolidated financial statements reflect all normal recurring adjustments that are, in the opinion of management, necessary to present fairly the financial position and results of operations for the respective interim periods. Certain information and notes normally included in our annual financial statements have been condensed or omitted from these interim financial statements pursuant to such rules and regulations. These condensed consolidated financial statements and other information included in this Quarterly Report on Form 10-Q should be read in conjunction with the consolidated financial statements and notes thereto included in our 2008 Form 10-K.

2. Summary of Significant Accounting Policies

Noncontrolling Interest Noncontrolling interest represents (1) DCP Midstream, LLC's ownership interest in the net assets of East Texas; (2) the noncontrolling interest holders' ownership interest in the net assets of Collbran Valley Gas Gathering, LLC, or Collbran, a joint venture acquired in August 2007; and (3) the noncontrolling interest holders' ownership interest in the net assets of Jackson Pipeline Company, a partnership we acquired in October 2008. For financial reporting purposes, the assets and liabilities of these entities are consolidated with those of our own, with any third party or affiliate interest in our consolidated balance sheet amounts shown as noncontrolling interest in equity. Distributions to and contributions from noncontrolling interests represent cash payments to and cash contributions from, respectively, such third party and affiliate investors.

3. Recent Accounting Pronouncements

Financial Accounting Standards Board, or FASB, Statement of Financial Accounting Standards, or SFAS, No. 167 Amendments to FASB Interpretation No. 46(R), or SFAS 167 In June 2009, the FASB issued SFAS 167, which requires entities to perform additional analysis of

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

their variable interest entities and consolidation methods. This SFAS becomes effective for us on January 1, 2010 and we are in the process of assessing the impact of this guidance on our condensed consolidated results of operations, cash flows and financial position.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

On July 1, 2009, the FASB Accounting Standards Codification, or ASC, became the source for authoritative U.S. Generally Accepted Accounting Principles, or GAAP, as noted in the discussion of Accounting Standards Update, or ASU, 2009-01 below. During the current quarter, the FASB issued several ASUs and ASCs. The following outlines the ASUs and ASCs that are applicable to us and may have an impact on our condensed consolidated financial statements and related disclosures:

ASU 2009-13 Revenue Recognition (Topic 605) Multiple-Deliverable Revenue Arrangements, or ASU 2009-13 In October 2009, the FASB issued ASU 2009-13 which amended ASC Topic 605 Revenue Recognition. The ASU addresses the accounting for multiple-deliverable arrangements, to enable vendors to account for products or services separately rather than as a combined unit. ASU 2009-13 is effective for us on January 1, 2011 and we are in the process of assessing the impact of ASU 2009-13 on our condensed consolidated results of operations, cash flows and financial position as a result of adoption.

ASU 2009-05 Fair Value Measurements and Disclosures (Topic 820) Measuring Liabilities at Fair Value, or ASU 2009-05 In August 2009, the FASB issued ASU 2009-05 which amended ASC Topic 820-10 Fair Value Measurements and Disclosures Overall for the fair value measurement of liabilities. The amended provisions in this update are designed to reduce potential ambiguity in financial reporting when measuring the fair value of liabilities, helping to improve the consistency in the application of Topic 820 Fair Value Measurements and Disclosures. ASU 2009-05 is effective for us on October 1, 2009. We have assessed the impact of ASU 2009-05 and there will be no impact on our condensed consolidated results of operations, cash flows or financial position. We will make the required disclosures in our December 31, 2009 financial statements.

ASU 2009-01 Topic 105 Generally Accepted Accounting Principles, or ASU 2009-01 In June 2009, the FASB issued ASU 2009-01, which amended ASC Topic 105 Generally Accepted Accounting Principles, or ASC 105 which establishes the FASB ASC as the source of authoritative GAAP. The ASC supersedes all existing non-SEC accounting and reporting standards. We adopted the amended provisions of ASC 105 effective September 15, 2009, and have included all required disclosures in this filing. The amended provisions of ASC 105 impacts only disclosures so there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption.

ASC 260 Earnings per Share, or ASC 260 In March 2008, the FASB amended guidance relating to earnings per share. The amendment seeks to improve the comparability of earnings per unit, or EPU, calculations for master limited partnerships with incentive distribution rights. We adopted these amended provisions effective January 1, 2009. As a result of adopting the amended provisions, undistributed earnings or losses are reduced or increased, respectively, by the amount of available cash that was generated during the current period, and undistributed earnings are no longer allocated to our general partner with respect to its incentive distribution rights, as our partnership agreement specifically limits incentive distributions to available cash. These amended provisions are applied retrospectively for all periods. We have retrospectively restated our previously disclosed net income (loss) per limited partner unit, or LPU, and related disclosures, within this filing. As a result of adoption, net income per LPU increased from \$2.97 per unit to \$5.24 per unit and net loss increased from \$(0.75) per unit to \$(0.79) per unit for the three and nine months ended September 30, 2008, respectively.

ASC 320 Investments Debt and Equity Securities, or ASC 320 In April 2009, the FASB amended the other-than-temporary impairment guidance for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities in the financial statements. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

ASC 323 Investments Equity Method and Joint Ventures, or ASC 323 In November 2008, the FASB amended guidance on equity method investments. This issue addresses a) how the initial carrying value of an equity method investment should be determined; b) how impairment assessment of an underlying indefinite-lived intangible asset of an equity method investment should be performed; c) how an equity method investee's issuance of shares should be accounted for; and d) how to account for a change in an investment from the equity method to the cost method. This amendment became effective for us on January 1, 2009, and although it has not impacted the manner in which we apply equity method accounting, this guidance will be considered on a prospective basis to transactions with equity method investees.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

ASC 350 Intangibles Goodwill and Other, or ASC 350, ASC 275 Risks and Uncertainties, or ASC 275 In April 2008, the FASB amended guidance relating to intangible assets and risks and uncertainties, for factors that should be considered in developing renewal or extension assumptions used to determine the useful life of an intangible asset. We adopted these amended provisions on January 1, 2009. As a result of acquisitions, we have intangible assets for customer contracts and related

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

relationships in our condensed consolidated balance sheets. Generally, costs to renew or extend such contracts are not significant, and are expensed to the condensed consolidated statements of operations as incurred. During the current quarter, there were no contracts that were recognized as intangible assets that were renewed or extended.

ASC 805 Business Combinations, or ASC 805 In April 2009, the FASB amended guidance relating to business combinations, providing additional guidance on the valuation of assets and liabilities assumed in a business combination that arise from contingencies, which would otherwise be subject to the provisions of other applicable GAAP. This amendment emphasizes that assets and liabilities assumed in a business combination that have an estimated fair value should be recorded at the time of acquisition. Assets and liabilities where the fair value may not be determinable during the measurement period will continue to be recognized pursuant to other applicable GAAP. This amendment was effective for us for business combinations with closing dates subsequent to January 1, 2009. During the first three quarters of 2009 we did not have any transactions that were accounted for as business combinations. We will account for any business combinations with closing dates subsequent to the effective date in accordance with this new guidance.

In December 2007, the FASB amended guidance relating to business combinations, which requires the acquiring entity in a business combination subsequent to January 1, 2009 to recognize all (and only) the assets acquired and liabilities assumed in the transaction; establishes the acquisition-date fair value as the measurement objective for all assets acquired and liabilities assumed; and requires the acquirer to disclose to investors and other users all of the information they need to evaluate and understand the nature and financial effect of the business combination. We adopted these amended provisions effective January 1, 2009, and will account for all transactions with closing dates subsequent to adoption in accordance with the revised provisions of this standard.

ASC 810 Consolidation, or ASC 810 In December 2007, the FASB amended guidance relating to consolidation, which establishes accounting and reporting standards for ownership interests in subsidiaries held by parties other than the parent, the amount of consolidated net income attributable to the parent and to the noncontrolling interest, changes in a parent's ownership interest and the valuation of retained noncontrolling equity investments when a subsidiary is deconsolidated. These amended provisions also establish reporting requirements that provide sufficient disclosures that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. We adopted these amended provisions effective January 1, 2009, which required retrospective restatement of our condensed consolidated financial statements for all periods presented in this filing. As a result of adoption, we have reclassified our noncontrolling interest on our condensed consolidated balance sheets, from a component of liabilities to a component of equity and have also reclassified net income attributable to noncontrolling interest on our condensed consolidated statements of operations, to below net income for all periods presented. Furthermore, we have displayed the portion of other comprehensive income that is attributable to the noncontrolling interest within our condensed consolidated statements of comprehensive income. We also added a rollforward of the noncontrolling interest within our condensed consolidated statements of changes in partners' equity and will present this financial statement on a quarterly basis.

ASC 815 Derivatives and Hedging, or ASC 815 In March 2008, the FASB amended guidance relating to derivatives and hedging to require disclosures of how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for and how derivative instruments and related hedged items affect an entity's financial position, financial performance and cash flows. We adopted these amended provisions effective January 1, 2009, and have included all required disclosures in this filing. The amended provisions impact only disclosures, so there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption.

ASC 820 Fair Value Measurements and Disclosures, or ASC 820 In April 2009, the FASB amended guidance relating to fair value measurements and disclosures, which provides additional guidance on the valuation of assets or liabilities that are held in markets that have seen a significant decline in activity. While this amendment does not change the overall objective of determining fair value, it emphasizes that in markets with significantly decreased activity and the appearance of non-orderly transactions, an entity may employ multiple valuation techniques, to which significant adjustments may be required, to determine the most appropriate fair value. During 2009, certain of the markets in which we transact have seen a decrease in overall volume; however, we believe that these markets continue to provide sufficient liquidity such that transactions are executed in an orderly manner at fair value. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

On January 1, 2008 we adopted the fair value measurement and disclosure requirements of ASC 820 for all financial assets and liabilities. Effective January 1, 2009, we adopted the fair value measurement and disclosure requirements for all nonfinancial assets and liabilities. There was no effect on our condensed consolidated results of operations, cash flows, or financial position,

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

and we have included all required disclosures as a result of the adoption of these requirements relative to nonfinancial assets and liabilities. The provisions of these requirements will be applied at such time a fair value measurement of a nonfinancial asset or nonfinancial liability is required, which may result in a fair value that is different than would have been calculated prior to the adoption of the fair value measurement and disclosure requirements.

ASC 825 *Financial Instruments*, or ASC 825 In April 2009, the FASB amended guidance relating to financial instruments, requiring disclosure of summarized financial information for financial instruments. We have instruments that are subject to the fair value disclosure requirements of ASC 825, and are subject to the amended provisions of this guidance. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

ASC 855 *Subsequent Events*, or ASC 855 In May 2009, the FASB amended guidance relating to subsequent events, which sets forth the recognition and disclosure requirements for events that occur after the balance sheet date, but before financial statements are issued or are available to be issued. We adopted these amended provisions effective June 30, 2009, and there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption. All appropriate disclosure of subsequent events is made within the footnotes.

4. Acquisitions

Gathering Compression and Processing Assets

In April 2009, we acquired an additional 25.1% interest in East Texas and a fixed price natural gas liquids derivative by NGL component for the period of April 2009 to March 2010, or NGL Hedge, from DCP Midstream, LLC, for aggregate consideration of 3,500,00 Class D units, valued at \$49.7 million. This transaction was among entities under common control. Our East Texas system includes a natural gas processing complex, an NGL fractionator and a gathering system. Transfers of net assets or exchanges of units between entities under common control are accounted for as if the transfer occurred at the beginning of the period, and prior years are retroactively adjusted to furnish comparative information similar to the pooling method. Accordingly, these condensed consolidated financial statements include the historical results of East Texas for all periods presented. The NGL Hedge was entered into on the date of the transaction. Accordingly these condensed consolidated financial statements include the results of the NGL Hedge prospectively from April 1, 2009. Prior to this transaction we owned a 25.0% limited liability company interest in East Texas, which we accounted for under the equity method of accounting. Subsequent to this transaction we own a 50.1% interest in East Texas, and account for East Texas as a consolidated subsidiary. The \$19.0 million deficit purchase price, including purchase price adjustments for working capital of \$0.7 million in the third quarter of 2009, under the historical basis of the net acquired assets was recorded as an increase in partners' equity, and the \$49.7 million of Class D units issued as consideration for this transaction was recorded as an increase in partners' equity. The Class D units converted into our common units on a one for one basis on August 17, 2009. The holders of the Class D units received the second quarter distribution paid on August 14, 2009.

(a) Amounts as previously reported with 25% of East Texas results presented as earnings from equity method investments.

(b) Adjustments to present East Texas on a consolidated basis at 100%, with noncontrolling interest of 49.9%.

(c) Adjustments to remove East Texas equity earnings at 25%.

On October 1, 2008, we acquired Michigan Pipeline & Processing, LLC, or MPP. The results of MPP's operations have been included in the condensed consolidated financial statements, within the Natural Gas Services segment, since that date. We may pay up to an additional \$15.0 million to the sellers depending on the earnings of the assets after a three-year period. This payment would increase goodwill as additional purchase price, if paid. In addition, we entered into a separate agreement that provides the seller with available treating capacity on certain Michigan assets. The seller agreed to pay up to \$1.5 million annually (reduced to \$0.8 million annually as of September 30, 2009) for up to nine years if they do not meet certain criteria, including providing additional volumes for treatment. These amounts may reduce goodwill as a return of purchase price, if paid. Of the payments received relating to this agreement, \$0.1 million was recorded to goodwill during the nine months ended September 30, 2009. No amounts were recorded to goodwill during the three months ended September 30, 2009. This agreement may be terminated earlier if certain performance criteria of Michigan assets are satisfied. Certain of these performance criteria were satisfied and, as a result, the amount was reduced to \$0.8 million per year as of September 30, 2009. We initially held a \$25.0 million letter of credit to secure the seller's performance under this agreement and to secure the seller's indemnification obligation under the acquisition agreement; however as a result of the satisfaction of certain performance conditions, this amount was reduced to approximately \$20.0 million as of September 30, 2009.

Under the purchase method of accounting, the assets and liabilities of MPP were recorded at their respective fair values as of the date of the acquisition, and we recorded goodwill of approximately \$7.0 million. The goodwill amount recognized relates primarily to projected customer growth. The purchase price allocation is as follows:

	(Millions)
Cash	\$ 1.7
Accounts receivable	2.1
Other assets	0.1
Other long term assets	3.9
Property, plant and equipment	116.1
Goodwill	7.0
Intangible assets	19.6
Other liabilities	(0.5)
Noncontrolling interest in joint venture	(1.6)
Total purchase price allocation	\$ 148.4

5. Agreements and Transactions with Affiliates**DCP Midstream, LLC***Predecessor*

DCP Midstream, LLC provided centralized corporate functions on behalf of our predecessor operations, including legal, accounting, cash management, insurance administration and claims processing, risk management, health safety and environmental, information technology,

human resources, credit, payroll, internal audit, taxes and engineering.

Omnibus Agreement

We have entered into an omnibus agreement, as amended, or the Omnibus Agreement, with DCP Midstream, LLC. Under the Omnibus Agreement, we are required to reimburse DCP Midstream, LLC for certain costs incurred and centralized corporate functions performed by DCP Midstream, LLC on our behalf. Under the Omnibus Agreement, DCP Midstream, LLC has issued parental guarantees, totaling \$43.0 million at September 30, 2009, in favor of certain counterparties to our commodity derivative instruments. We incurred \$2.5 million and \$2.4 million, respectively for the three months ended September 30, 2009 and 2008, and \$7.3 million for both the nine months ended September 30, 2009 and 2008, for all fees under the Omnibus Agreement.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

The Omnibus Agreement was not amended following our acquisition of an additional 25.1% interest in East Texas on April 1, 2009. East Texas incurs general and administrative expenses directly from DCP Midstream, LLC. During the three months ended September 30, 2009 and 2008 East Texas incurred \$2.0 million and \$2.3 million, respectively, and during both the nine months ended September 30, 2009 and 2008 East Texas incurred \$6.4 million, for general and administrative expenses from DCP Midstream, LLC.

Outside of the Omnibus Agreement and amounts incurred by East Texas, we incurred other fees with DCP Midstream, LLC of \$0.4 million for both the three months ended September 30, 2009 and 2008 and \$1.6 million and \$1.3 million, respectively, for the nine months ended September 30, 2009 and 2008. These amounts include allocated expenses, including professional services, insurance and internal audit.

Other Agreements and Transactions with DCP Midstream, LLC

In conjunction with our acquisition of a 50.1% limited liability company interest in East Texas from DCP Midstream, LLC, we entered into agreements with DCP Midstream, LLC whereby DCP Midstream, LLC will reimburse East Texas for certain amounts of East Texas capital projects as defined in the Contribution Agreements. These reimbursements are for a period not to exceed three years from the respective acquisition dates. DCP Midstream, LLC made capital contributions to East Texas for capital projects of \$62.4 million and \$14.7 million for the nine months ended September 30, 2009 and 2008, respectively.

On February 11, 2009, we announced that our East Texas natural gas processing complex and natural gas delivery system known as the Carthage Hub, had been temporarily shut in following a fire that was caused by a third party underground pipeline outside of our property line that ruptured. We are actively pursuing full reimbursement of our costs and lost margin associated with the incident from the responsible third party. In the event we are not reimbursed by the responsible third party, we have insurance covering property damage, net of applicable deductibles. Following this incident, DCP Midstream, LLC has agreed to reimburse to us 25% of any claims received as reimbursement of costs and lost margin, from the responsible third party or from insurance. DCP Midstream, LLC will pay seventy-five percent of costs related to the incident as a result of this agreement. As of September 30, 2009, East Texas recorded a \$1.0 million receivable for reimbursement from DCP Midstream, LLC for insurance deductibles relating to this incident. Seventy-five percent of this reimbursement will be allocated to noncontrolling interest.

We sell a portion of our residue gas and NGLs to, purchase natural gas and other petroleum products from, and provide gathering and transportation services for, DCP Midstream, LLC. We anticipate continuing to purchase commodities from and sell commodities to DCP Midstream, LLC in the ordinary course of business. In addition, DCP Midstream, LLC conducts derivative activities on our behalf.

DCP Midstream, LLC owns certain assets and is party to certain contractual relationships around our Pelico system that are periodically used for the benefit of Pelico. DCP Midstream, LLC is able to source natural gas upstream of Pelico and deliver it to us and is able to take natural gas from the outlet of the Pelico system and market it downstream of Pelico. Pelico has certain contractual relationships that define how natural gas is bought and sold between us and DCP Midstream, LLC.

In January 2009, we amended our Pelico gas purchase and sales agreement with DCP Midstream, LLC. As a result of the amendment, our purchases from DCP Midstream, LLC occur upstream of Pelico, rather than at the inlet of Pelico. We assumed from DCP Midstream, LLC a firm transportation agreement with an affiliate to transport our natural gas purchases from DCP Midstream, LLC to Pelico. In addition, historically, the sales price of a portion of the natural gas we sold to DCP Midstream, LLC was determined based on the price at which we purchased the natural gas from DCP Midstream, LLC plus a portion of the index differential between upstream sources to certain downstream indices with a maximum and minimum differential. The pricing methodology has changed as described below:

DCP Midstream, LLC will supply Pelico's system requirements that exceed its on-system supply. Accordingly, DCP Midstream, LLC purchases natural gas and we buy the gas from DCP Midstream, LLC at the actual acquisition cost plus transportation service charges incurred. We generally report purchases associated with these activities gross in the condensed consolidated statements of

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

operations as purchases of natural gas, propane, NGLs and condensate from affiliates.

For volumes supplied to certain industrial end users and any volumes in excess of the on-system demand, DCP Midstream, LLC will purchase natural gas from us and sell it to certain industrial end users, or transport it to sales

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

points at an index-based price, less contractually agreed-to marketing fees. We generally report revenues associated with these activities gross in the condensed consolidated statements of operations as sales of natural gas, propane, NGLs and condensate to affiliates.

DCP Midstream, LLC was a significant customer during the three and nine months ended September 30, 2009 and 2008.

In conjunction with our acquisition of a 40% limited liability company interest in Discovery from DCP Midstream, LLC in July 2007, we entered into a letter agreement with DCP Midstream, LLC whereby DCP Midstream, LLC will make capital contributions to us as reimbursement for contributions to Discovery related to Discovery's Tahiti capital project. DCP Midstream, LLC made capital contributions to us during the nine months ended September 30, 2009 and 2008 of \$0.7 million and \$1.6 million, respectively, to reimburse us for this capital project.

DCP Midstream, LLC has issued additional parental guarantees outside of the Omnibus Agreement, totaling \$40.0 million at September 30, 2009, in favor of certain counterparties to our commodity derivative instruments to mitigate a portion of our collateral requirements with those counterparties. We pay DCP Midstream, LLC a fee of 0.50% per annum on these outstanding guarantees.

Spectra Energy

We purchase a portion of our propane from and market propane on behalf of Spectra Energy. We anticipate continuing to purchase propane from and market propane on behalf of Spectra Energy in the ordinary course of business.

We entered into a propane supply agreement with Spectra Energy, effective May 1, 2008 and terminating April 30, 2014, which provides us propane supply at our marine terminal, which is included in our Wholesale Propane Logistics segment, for up to approximately 120 million gallons of propane annually. This contract replaces the supply provided under a contract with a third party that was terminated for non-performance during the first quarter of 2008.

ConocoPhillips

We have multiple agreements whereby we provide a variety of services for ConocoPhillips and its affiliates. The agreements include fee-based and percent-of-proceeds gathering and processing arrangements, and gas purchase and gas sales agreements. We anticipate continuing to purchase from and sell these commodities to ConocoPhillips and its affiliates in the ordinary course of business. In addition, we may be reimbursed by ConocoPhillips for certain capital projects where the work is performed by us. We received \$0.7 million and \$1.8 million of capital reimbursements during the nine months ended September 30, 2009 and 2008, respectively.

			(Millions)	
Gathering systems	15	30 Years	\$ 597.8	\$ 497.7
Processing plants	25	30 Years	390.5	383.2
Terminals	25	30 Years	28.9	28.5
Transportation	25	30 Years	217.3	216.6
Underground storage	20	50 Years	0.1	0.1
General plant	3	5 Years	16.0	13.9
Construction work in progress			102.0	73.9
Property, plant and equipment			1,352.6	1,213.9
Accumulated depreciation			(376.6)	(331.2)
Property, plant and equipment, net			\$ 976.0	\$ 882.7

The above amounts include accrued capital expenditures of \$11.5 million and \$17.4 million as of September 30, 2009 and December 31, 2008, respectively, which are included in other current liabilities in the condensed consolidated balance sheets.

Depreciation expense was \$15.7 million and \$12.5 million for the three months ended September 30, 2009 and 2008, respectively, and \$45.4 million and \$37.3 million for the nine months ended September 30, 2009 and 2008, respectively.

7. Goodwill

We performed our annual goodwill assessment during the quarter and concluded that the entire amount of goodwill on the balance sheet is recoverable. We used a discounted cash flow analysis supported by market valuation multiples to perform the assessment. Key assumptions in the analysis include the use of an appropriate discount rate, estimated future cash flows and an estimated run rate of operating and general and administrative costs. In estimating cash flows, we incorporate current market information, as well as historical and other factors, into our forecasted commodity prices. Our annual goodwill impairment tests indicated that our reporting units' fair value exceeded the carrying or book value. If actual results are not consistent with our assumptions and estimates, or our assumptions and estimates change due to new information, we may be exposed to goodwill impairment charges, which would be recognized in the period in which the carrying value exceeds fair value.

8. Equity Method Investments

The following table summarizes our equity method investments:

Percentage of	Carrying Value as of
---------------	----------------------

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Ownership as of

	September 30, 2009 and December 31, 2008	September 30, 2009	December 31, 2008
		(Millions)	
Discovery Producer Services LLC	40%	\$ 110.8	\$ 105.0
Black Lake Pipe Line Company	45%	6.8	6.3
Other	50%	0.2	0.2
Total equity method investments		\$ 117.8	\$ 111.5

There was a deficit between the carrying amount of the investment and the underlying equity of Discovery of \$38.2 million and \$39.7 million at September 30, 2009 and December 31, 2008, respectively, which is associated with, and is being accreted over, the life of the underlying long-lived assets of Discovery.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

There was a deficit between the carrying amount of the investment and the underlying equity of Black Lake of \$5.8 million and \$6.0 million at September 30, 2009 and December 31, 2008, respectively, which is associated with, and is being accreted over, the life of the underlying long-lived assets of Black Lake.

In the second quarter of 2009, Discovery's LLC agreement was amended to calculate available cash based on cash on hand at the end of the month preceding the end of each calendar quarter (e.g., August 31, for the third quarter) and to require distribution of available cash by the end of each calendar quarter. Prior to this amendment, Discovery calculated available cash based on cash on hand at the end of each calendar quarter and made the related distribution within 30 days of the end of each calendar quarter. The change in distribution timing will result in an extra distribution to us in 2009 from Discovery.

Earnings and distributions from equity method investments were as follows:

	Three Months Ended September 30, 2009		Nine Months Ended September 30, 2008	
		2008	2009	2008
	(Millions)			
Discovery Producer Services LLC	\$ 7.9	\$ 6.1	\$ 9.7	\$ 23.3
Black Lake Pipe Line Company and other	0.5	0.3	1.3	0.9
Total earnings from equity method investments	\$ 8.4	\$ 6.4	\$ 11.0	\$ 24.2
Distributions from equity method investments	\$ 7.5	\$ 9.0	\$ 10.5	\$ 30.8
Earnings from equity method investments, net of distributions earnings, respectively	\$ (0.9)	\$ 2.6	\$ (0.5)	\$ 6.6

The following summarizes financial information of our equity method investments:

	Three Months Ended		Nine Months Ended	
	September 30,		September 30,	
	2009	2008	2009	2008
	(Millions)			
Statements of operations:				
Operating revenue	\$ 51.3	\$ 63.0	\$ 113.2	\$ 236.3
Operating expenses	\$ 32.4	\$ 48.8	\$ 91.2	\$ 188.3
Net income	\$ 19.0	\$ 14.2	\$ 21.9	\$ 52.1

	September 30, 2009	December 31, 2008
	(Millions)	
Balance sheets:		
Current assets	\$ 57.5	\$ 54.1
Long-term assets	386.2	392.9

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Current liabilities	(26.1)	(46.0)
Long-term liabilities	(23.3)	(20.1)
Net assets	\$ 394.3	\$ 380.9

9. Fair Value Measurement

Determination of Fair Value

Below is a general description of our valuation methodologies for derivative financial assets and liabilities, as well as short-term and restricted investments, which are measured at fair value. Fair values are generally based upon quoted market prices, where available. In the event that listed market prices or quotes are not available, we determine fair value based upon a market quote, adjusted by other market-based or independently sourced market data such as historical commodity volatilities, crude oil future yield curves, and/or counterparty specific considerations. These adjustments result in a fair value for each asset or liability under an exit price methodology, in line with how we believe a marketplace participant would value that asset or liability. These adjustments may include amounts to reflect counterparty credit quality, the effect of our own creditworthiness, the time value of money and/or the liquidity of the market.

Counterparty credit valuation adjustments are necessary when the market price of an instrument is not indicative of the fair value as a result of the credit quality of the counterparty. Generally, market quotes assume that all counterparties have near zero, or low, default rates and have equal credit quality. Therefore, an adjustment may be necessary to reflect the credit quality of a specific counterparty to determine the fair value of the instrument. We record counterparty credit valuation adjustments on all derivatives that are in a net asset position as of the measurement date in accordance with our established counterparty credit policy, which takes into account any collateral margin that a counterparty may have posted with us.

Entity valuation adjustments are necessary to reflect the effect of our own credit quality on the fair value of our net liability position with each counterparty. This adjustment takes into account any credit enhancements, such as collateral margin we may have posted with a counterparty, as well as any letters of credit that we have provided. The methodology to determine this adjustment is consistent with how we evaluate counterparty credit risk, taking into account our own credit rating, current credit spreads, as well as any change in such spreads since the last measurement date.

Liquidity valuation adjustments are necessary when we are not able to observe a recent market price for financial instruments that trade in less active markets for the fair value to reflect the cost of exiting the position. Exchange traded contracts are valued at market value without making any additional valuation adjustments and, therefore, no liquidity reserve is applied. For contracts other than exchange traded instruments, we mark our positions to the midpoint of the bid/ask spread, and record a liquidity reserve based upon our total net position. We believe that such practice results in the most reliable fair value measurement as viewed by a market participant.

We manage our derivative instruments on a portfolio basis and the valuation adjustments described above are calculated on this basis. We believe that the portfolio level approach represents the highest and best use for these assets as there are benefits inherent in naturally offsetting positions within the portfolio at any given time, and this approach is consistent with how a market participant would view and value the assets and liabilities. Although we take a portfolio approach to managing these assets/liabilities, in order to reflect the fair value of any one individual contract within the portfolio, we allocate all valuation adjustments down to the contract level, to the extent deemed necessary, based upon either the notional contract volume, or the contract value, whichever is more applicable.

The methods described above may produce a fair value calculation that may not be indicative of net realizable value or reflective of future fair values. While we believe that our valuation methods are appropriate and consistent with other marketplace participants, we recognize that the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. We review our fair value policies on a regular basis taking into consideration changes in the marketplace and, if necessary, will adjust our policies accordingly.

Valuation Hierarchy

Our fair value measurements are grouped into a three-level valuation hierarchy. The valuation hierarchy is based upon the transparency of inputs to the valuation of an asset or liability as of the measurement date. The three levels are defined as follows.

Level 1 inputs are unadjusted quoted prices for *identical* assets or liabilities in active markets.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

Level 2 inputs include quoted prices for *similar* assets and liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument.

Level 3 inputs are unobservable and considered significant to the fair value measurement.

A financial instrument's categorization within the hierarchy is based upon the input that requires the highest degree of judgment in the determination of the instrument's fair value. Following is a description of the valuation methodologies used as well as the general classification of such instruments pursuant to the hierarchy.

Commodity Derivative Assets and Liabilities

We enter into a variety of derivative financial instruments, which may include over the counter, or OTC, instruments, such as natural gas, crude oil or NGL contracts.

Within our Natural Gas Services segment we typically use OTC derivative contracts in order to mitigate a portion of our exposure to natural gas, NGL and condensate price changes. We also may enter into natural gas derivatives to lock in margin around our storage or transportation assets. These instruments are generally classified as Level 2. Depending upon market conditions and our strategy, we may enter into OTC derivative positions with a significant time horizon to maturity, and market prices for these OTC derivatives may only be readily observable for a portion of the duration of the instrument. In order to calculate the fair value of these instruments, readily observable market information is utilized to the extent that it is available; however, in the event that readily observable market data is not available, we may interpolate or extrapolate based upon observable data. In instances where we utilize an interpolated or extrapolated value, and it is considered significant to the valuation of the contract as a whole, we would classify the instrument within Level 3.

Within our Wholesale Propane Logistics segment, we may enter into a variety of financial instruments to either secure sales or purchase prices, or capture a variety of market opportunities. Since financial instruments for NGLs tend to be counterparty and location specific, we primarily use the OTC derivative instrument markets, which are not as active and liquid as exchange traded instruments. Market quotes for such contracts may only be available for short dated positions (up to six months), and a market itself may not exist beyond such time horizon. Contracts entered into with a relatively short time horizon for which prices are readily observable in the OTC market are generally classified within Level 2. Contracts with a longer time horizon, for which we internally generate a forward curve to value such instruments, are generally classified within Level 3. The internally generated curve may utilize a variety of assumptions including, but not limited to, historical and future expected relationship of NGL prices to crude oil prices, the knowledge of expected supply sources coming on line, expected weather trends within certain regions of the United States, and the future expected demand for NGLs.

Each instrument is assigned to a level within the hierarchy at the end of each financial quarter depending upon the extent to which the valuation inputs are observable. Generally, an instrument will move toward a level within the hierarchy that requires a lower degree of judgment as the time to maturity approaches, and as the markets in which the asset trades will likely become more liquid and prices more readily available in the market, thus reducing the need to rely upon our internally developed assumptions. However, the level of a given instrument may change, in either direction, depending upon market conditions and the availability of market observable data.

Interest Rate Derivative Assets and Liabilities

We use interest rate swap agreements as part of our overall capital strategy. These instruments effectively exchange a portion of our floating rate debt for fixed rate debt. The swaps are generally priced based upon a London Interbank Offered Rate, or LIBOR, instrument with similar duration, adjusted by the credit spread between our company and the LIBOR instrument. Given that a significant portion of the swap value is derived from the credit spread, which may be observed by comparing similar assets in the market, these instruments are classified within Level 2. Default risk on either side of the swap transaction is also considered in the valuation. We record counterparty credit and entity valuation adjustments in the valuation of our interest rate swaps; however, these reserves are not considered to be a significant input to the overall valuation.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)*****Short-Term and Restricted Investments***

We are required to post collateral to secure the term loan portion of our credit facility, and may elect to invest a portion of our available cash balances in various financial instruments such as commercial paper and money market instruments. The money market instruments are generally priced at acquisition cost, plus accreted interest at the stated rate, which approximates fair value, without any additional adjustments. Given that there is no observable exchange traded market for identical money market securities, we have classified these instruments within Level 2. Investments in commercial paper are priced using a yield curve for similarly rated instruments, and are classified within Level 2. As of September 30, 2009, nearly all of our short-term and restricted investments were held in the form of money market securities.

Nonfinancial Assets and Liabilities

We utilize fair value on a non-recurring basis to perform impairment tests as required on our property, plant and equipment, goodwill and intangible assets. The inputs used to determine such fair value are primarily based upon internally developed cash flow models and would generally be classified within Level 3, in the event that we were required to measure and record such assets at fair value within our consolidated financial statements. Additionally, we use fair value to determine the inception value of our asset retirement obligations on our leased property, plant and equipment. The inputs used to determine such fair value are primarily based upon costs incurred historically for similar work, as well as estimates from independent third parties for costs that would be incurred to restore leased property to the contractually stipulated condition, and would generally be classified within Level 3.

The following table presents the financial instruments carried at fair value as of September 30, 2009 and December 31, 2008:

	September 30, 2009			December 31, 2008				
	Level 1	Level 2	Level 3	Total Carrying Value (Millions)	Level 1	Level 2	Level 3	Total Carrying Value
Current assets:								
Short term investments (a)	\$	\$ 0.1	\$	\$ 0.1	\$	\$	\$	\$
Commodity derivatives (b)	\$	\$ 10.3	\$ 0.4	\$ 10.7	\$	\$ 15.1	\$ 0.3	\$ 15.4
Long-term assets:								
Restricted investments	\$	\$ 10.0	\$	\$ 10.0	\$	\$ 60.2	\$	\$ 60.2
Commodity derivatives (c)	\$	\$ 2.0	\$ 0.1	\$ 2.1	\$	\$ 6.9	\$ 1.7	\$ 8.6
Interest rate derivatives (c)	\$	\$	\$	\$	\$	\$	\$	\$
Current liabilities (d):								
Commodity derivatives	\$	\$ (13.4)	\$ (0.9)	\$ (14.3)	\$	\$ (1.2)	\$	\$ (1.2)
Interest rate derivatives	\$	\$ (20.0)	\$	\$ (20.0)	\$	\$ (16.5)	\$	\$ (16.5)
Long-term liabilities (e):								
Commodity derivatives	\$	\$ (26.0)	\$ (1.0)	\$ (27.0)	\$	\$ (3.2)	\$	\$ (3.2)
Interest rate derivatives	\$	\$ (13.6)	\$	\$ (13.6)	\$	\$ (22.8)	\$	\$ (22.8)

(a) Included in other current assets in our condensed consolidated balance sheets.

(b) Included in current unrealized gains on derivative instruments in our condensed consolidated balance sheets.

(c) Included in long-term unrealized gains on derivative instruments in our condensed consolidated balance sheets.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

- (d) Included in current unrealized losses on derivative instruments in our condensed consolidated balance sheets.
- (e) Included in long-term unrealized losses on derivative instruments in our condensed consolidated balance sheets.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)*****Changes in Level 3 Fair Value Measurements***

The tables below illustrate a rollforward of the amounts included in our condensed consolidated balance sheets for derivative financial instruments that we have classified within Level 3. The determination to classify a financial instrument within Level 3 is based upon the significance of the unobservable factors used in determining the overall fair value of the instrument. Since financial instruments classified as Level 3 typically include a combination of observable components (that is, components that are actively quoted and can be validated to external sources) and unobservable components, the gains and losses in the table below may include changes in fair value due in part to observable market factors, or changes to our assumptions on the unobservable components. Depending upon the information readily observable in the market, and/or the use of unobservable inputs, which are significant to the overall valuation, the classification of any individual financial instrument may differ from one measurement date to the next. In the event that there is a movement to/from the classification of an instrument as Level 3, we have reflected such items in the table below within the "Transfers In/Out of Level 3" caption.

We manage our overall risk at the portfolio level, and in the execution of our strategy, we may use a combination of financial instruments, which may be classified within any level. Since Level 1 and Level 2 risk management instruments are not included in the rollforward below, the gains or losses in the table do not reflect the effect of our total risk management activities.

	Beginning Balance	Net Realized and Unrealized Gains (Losses) Included in Earnings	Transfers In/Out of Level 3 (a)	Purchases, Issuances and Settlements, Net	Ending Balance	Net Unrealized Gains (Losses) Still Held Included in Earnings (b)
Three months ended September 30, 2009:						
Commodity derivative instruments:						
Current assets	\$ 1.2	\$ (0.2)	\$	\$ (0.6)	\$ 0.4	\$ (0.8)
Long-term assets	\$	\$ 0.1	\$	\$	\$ 0.1	\$ 0.1
Current liabilities	\$ (0.1)	\$ (0.6)	\$	\$ (0.2)	\$ (0.9)	\$ (0.6)
Long-term liabilities	\$ (0.9)	\$ (0.1)	\$	\$	\$ (1.0)	\$ (0.1)
Three months ended September 30, 2008:						
Commodity derivative instruments:						
Current assets	\$ 1.0	\$ 1.0	\$	\$ (0.2)	\$ 1.8	\$ 1.2
Long-term assets	\$ 1.6	\$ (0.3)	\$	\$	\$ 1.3	\$ (0.4)
Current liabilities	\$ (7.5)	\$ 2.1	\$ 5.3	\$	\$ (0.1)	\$ 2.0
Long-term liabilities	\$ (7.7)	\$ 3.1	\$ 4.6	\$	\$	\$ 3.1
Nine months ended September 30, 2009:						
Commodity derivative instruments:						
Current assets	\$ 0.3	\$ (3.0)	\$	\$ 3.1	\$ 0.4	\$ 0.4
Long-term assets	\$ 1.7	\$ (1.6)	\$	\$	\$ 0.1	\$ (1.6)
Current liabilities	\$	\$ (0.9)	\$	\$	\$ (0.9)	\$ (0.9)
Long-term liabilities	\$	\$ (1.0)	\$	\$	\$ (1.0)	\$ (1.0)
Nine months ended September 30, 2008:						
Commodity derivative instruments:						
Current assets	\$ 0.2	\$ 2.0	\$	\$ (0.4)	\$ 1.8	\$ 1.8

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Long-term assets	\$ 1.5	\$ (0.2)	\$	\$	\$ 1.3	\$ (0.3)
Current liabilities	\$ (1.6)	\$ (0.3)	\$	\$ 1.8	\$ (0.1)	\$ (0.1)
Long-term liabilities	\$ (0.2)	\$ 0.2	\$	\$	\$	\$ 0.2

- (a) Amounts transferred in are reflected at the fair value as of the beginning of the period and amounts transferred out are reflected at fair value at the end of the period.
- (b) Represents the amount of total gains or losses for the period, included in gains or losses from commodity derivative activity, net, attributable to change in unrealized gains (losses) relating to assets and liabilities classified as Level 3 that are still held at September 30, 2009 and 2008.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)*****Estimated Fair Value of Financial Instruments***

We have determined fair value amounts using available market information and appropriate valuation methodologies. However, considerable judgment is required in interpreting market data to develop the estimates of fair value. Accordingly, the estimates presented herein are not necessarily indicative of the amounts that we could realize in a current market exchange. The use of different market assumptions and/or estimation methods may have a material effect on the estimated fair value amounts.

The fair value of restricted investments, accounts receivable and accounts payable are not materially different from their carrying amounts because of the short term nature of these instruments or the stated rates approximating market rates. Unrealized gains and unrealized losses on derivative instruments are carried at fair value. The carrying and fair values of outstanding balances under our credit agreement are approximately \$613.0 million, and \$587.6 million, respectively, as of September 30, 2009. We determine the fair value of our credit facility borrowings based upon the discounted present value of expected future cash flows, taking into account the difference between the contractual borrowing spread and the spread for similar credit facilities available in the marketplace. Additionally, we have executed interest rate swap agreements on a portion of our interest rate exposure which swaps variable for fixed interest rates.

10. Debt

Long-term debt was as follows:

	September 30, 2009	December 31, 2008
	(Millions)	
Revolving credit facility, weighted-average variable interest rate of 0.71% and 2.08%, respectively, and net effective interest rate of 4.39% and 4.48%, respectively, due June 21, 2012 (a)	\$ 603.0	\$ 596.5
Term loan facility, variable interest rate of 0.35% and 1.54%, respectively, due June 21, 2012 (b)	10.0	60.0
Total long-term debt	\$ 613.0	\$ 656.5

(a) \$575.0 million of interest rate exposure has been swapped to a fixed interest rate obligation with effective fixed interest rates ranging from 2.26% to 5.19%, for a net effective interest rate of 4.39% on the \$603.0 million of outstanding debt under our revolving credit facility as of September 30, 2009.

(b) The term loan facility is fully secured by restricted investments.

Credit Agreement

We have an \$824.6 million 5-year credit agreement that matures June 21, 2012, or the Credit Agreement, which consists of:

a \$814.6 million revolving credit facility; and

a \$10.0 million term loan facility.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

The above amounts are net of non-participation by Lehman Brothers Commercial Bank. At September 30, 2009 and December 31, 2008, we had \$0.3 million of letters of credit outstanding under the Credit Agreement. Outstanding balances under the term loan facility are fully collateralized by investments in high-grade securities, which are classified as restricted investments in the accompanying condensed consolidated balance sheets. As of September 30, 2009 the available capacity under the revolving credit facility was \$211.9 million.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

Other Agreements

As of September 30, 2009, we had an outstanding letter of credit with a counterparty to our commodity derivative instruments of \$10.0 million, which reduces the amount of cash we may be required to post as collateral. We pay a fee of 0.75% per annum on this letter of credit. This letter of credit was issued directly by a financial institution and does not reduce the available capacity under the Credit Agreement.

11. Risk Management and Hedging Activities

Our day to day operations expose us to a variety of risks including but not limited to changes in the prices of commodities that we buy or sell, changes in interest rates, and the creditworthiness of each of our counterparties. We manage certain of these exposures by using physical and financial derivative instruments. We have established a comprehensive risk management policy, or Risk Management Policy, and a risk management committee, or the Risk Management Committee, to monitor and manage market risks associated with commodity prices and counterparty credit. The Risk Management Committee is responsible for the overall management of credit risk and commodity price risk, including monitoring exposure limits. The following briefly describes each of the risks that we manage.

Commodity Price Risk

We are exposed to the impact of market fluctuations in the prices of natural gas, NGLs and condensate as a result of our gathering, processing, sales and storage activities. For gathering and processing services, we may receive fees or commodities as payment for these services, depending on the contract type. We enter into derivative financial instruments to mitigate the risk of weakening natural gas, NGL and condensate prices associated with our gathering, processing and sales activities, thereby stabilizing our cash flows. We have mitigated a portion of our expected commodity price risk associated with our gathering, processing and sales activities through 2014 with natural gas, crude oil and NGL derivative instruments. Additionally, given the limited depth of the NGL derivatives market, we primarily utilize crude oil swaps and, following our acquisition of the NGL Hedge on April 1, 2009, to a limited extent NGL derivatives to mitigate a portion of our commodity price exposure for propane and heavier NGLs. Historically, there has been a relationship between NGL prices and crude oil prices. Given the relationship and the lack of liquidity in the NGL financial market, we have historically used crude oil swaps to mitigate a portion of NGL price risks. As a result of the current movements in the relationship of NGL prices to crude oil prices outside of recent historical ranges, we have additional exposure to changes in the relationship. These transactions are primarily accomplished through the use of forward contracts, which are swap futures that effectively exchange our floating rate price risk for a fixed rate. However, the type of instrument that we use to mitigate our risk may vary depending upon our risk management objective. These transactions are not designated as hedging instruments for accounting purposes and the change in fair value is reflected within our condensed consolidated statements of operations as a gain or loss on commodity derivative activity.

With respect to our Pelico system, we may enter into financial derivatives to lock in transportation margins across the system, or to lock in margins around our leased storage facility to maximize value. This objective may be achieved through the use of physical purchases or sales of gas that are accounted for under accrual accounting. While the physical purchase or sale of gas transactions are accounted for under accrual accounting and any inventory is stated at lower of cost or market, the swaps are not designated as hedging instruments for accounting purposes and any change in fair value of these instruments is reflected within our condensed consolidated statements of operations.

Our Wholesale Propane Logistics segment is generally designed to establish stable margins by entering into supply arrangements that specify prices based on established floating price indices and by entering into sales agreements that provide for floating prices that are tied to our variable supply costs plus a margin. To the extent possible, we match the pricing of our supply portfolio to our sales portfolio in order to lock in value and reduce our overall commodity price risk. However, to the extent that we carry propane inventories or our sales and supply arrangements are not aligned, we are exposed to market variables and commodity price risk. We manage the commodity price risk of our supply portfolio and sales portfolio with both physical and financial transactions. While the majority of our sales and purchases in this segment are index-based, occasionally, we may enter into fixed price sales agreements in the event that a retail propane distributor desires to purchase propane from us on a fixed price basis. In such cases, we may manage this risk with derivatives that allow us to swap our fixed price risk to market index prices that are matched to our market index supply costs. In addition, we may on occasion use financial derivatives to manage the value of our propane inventories. These transactions are not designated as hedging instruments for accounting purposes and the change in value

is reflected in the current period within our condensed consolidated statements of operations as a gain or loss on commodity derivative activity.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

Our portfolio of commodity derivative activity is primarily accounted for using the mark-to-market method of accounting; however, depending upon our risk profile and objectives, in certain limited cases, we may execute transactions that qualify for the hedge method of accounting. Effective July 1, 2007, we elected to discontinue using the hedge method of accounting for derivatives that manage our commodity price risk. We have used the mark-to-market method of accounting for all derivatives that manage our commodity price risk since July 2007, thus changes in fair value are recorded directly to the condensed consolidated statements of operations. Derivative contracts that were put in place prior to this date may have been designated as cash flow or fair value hedges, and are described below.

Commodity Cash Flow Hedges We use NGL, natural gas and crude oil swaps to mitigate the risk of market fluctuations in the price of NGLs, natural gas and condensate. Prior to July 1, 2007, the effective portion of the change in fair value of a derivative designated as a cash flow hedge was recorded in accumulated other comprehensive income, or AOCI. During the period in which the hedged transaction impacted earnings, amounts in AOCI associated with the hedged transaction were reclassified to the condensed consolidated statements of operations in the same accounts as the item being hedged.

Given our election to discontinue using the hedge method of accounting, the remaining net loss deferred in AOCI relative to these cash flow hedges will be reclassified to sales of natural gas, propane, NGLs and condensate, through December 2011, as the underlying transactions impact earnings. Subsequent to July 1, 2007, the changes in fair value of financial derivatives are included in gains and losses from commodity derivative activity in the condensed consolidated statements of operations.

Commodity Fair Value Hedges Historically, we used fair value hedges to mitigate risk to changes in the fair value of an asset or a liability, or an identified portion thereof, that is attributable to fixed price risk. As described above relative to our Wholesale Propane Logistics segment, we may have hedged producer price locks, or fixed price gas purchases, to reduce our cash flow exposure to fixed price risk by swapping the fixed price risk for a floating price position linked to the New York Mercantile Exchange or an index-based position.

Interest Rate Risk

Interest Rate Cash Flow Hedges We mitigate a portion of our interest rate risk with interest rate swaps, which reduce our exposure to market rate fluctuations by converting variable interest rates to fixed interest rates. These interest rate swap agreements convert the interest rate associated with an aggregate of \$575.0 million of the indebtedness outstanding under our revolving credit facility to a fixed rate obligation, thereby reducing the exposure to market rate fluctuations. All interest rate swap agreements have been designated as cash flow hedges, and effectiveness is determined by matching the principal balance and terms with that of the specified obligation. The effective portions of changes in fair value are recognized in AOCI in the condensed consolidated balance sheets and are reclassified into earnings as the hedged transactions impact earnings. The effect that these swaps have on our condensed consolidated financial statements, as well as the effect that is expected over the upcoming 12 months is summarized in the charts below. However, due to the volatility of the interest rate markets, the corresponding value in AOCI is subject to change prior to its reclassification into earnings. Ineffective portions of changes in fair value are recognized in earnings. \$425.0 million of the agreements reprice prospectively approximately every 90 days and the remaining \$150.0 million of the agreements reprice prospectively approximately every 30 days. Under the terms of the interest rate swap agreements, we pay fixed rates ranging from 2.26% to 5.19%, and receive interest payments based on the three-month and one-month LIBOR. The differences to be paid or received under the interest rate swap agreements are recognized as an adjustment to interest expense.

Contingent Credit Features

Each of the above risks is managed through the execution of individual contracts with a variety of counterparties. Certain of our derivative contracts may contain credit-risk related contingent provisions that may require us to take certain actions in certain circumstances.

We have International Swap Dealers Association, or ISDA, contracts which are standardized master legal arrangements that establish key terms and conditions which govern certain derivative transactions. These ISDA contracts contain standard credit-risk related contingent provisions. Some of the provisions we are subject to are outlined below.

If we were to have an effective event of default under our credit agreement that occurs and is continuing, our ISDA counterparties may have the right to request early termination and net settlement of any outstanding derivative liability positions.

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

In the event that DCP Midstream, LLC was to be downgraded below investment grade by at least one of the major credit rating agencies, certain of our ISDA counterparties may have the right to reduce our collateral threshold to zero, potentially requiring us to fully collateralize any commodity contracts in a net liability position.

Additionally, in some cases, our ISDA contracts contain cross-default provisions that could constitute a credit-risk related contingent feature. These provisions apply if we default in making timely payments under those agreements and the amount of the default is above certain predefined thresholds, which are significantly high and are generally consistent with the terms of our credit agreement. As of September 30, 2009, we are not a party to any agreements that would be subject to these provisions other than our credit agreement.

Our commodity derivative contracts that are not governed by ISDA contracts do not have any credit-risk related contingent features.

Depending upon the movement of commodity prices and interest rates, each of our individual contracts with counterparties to our commodity derivative instruments or to our interest rate swap instruments are in either a net asset or net liability position.

As of September 30, 2009, we had approximately \$34.0 million of individual commodity derivative contracts that contain credit-risk related contingent features that were in a net liability position, and have not posted any cash collateral relative to such positions. If a credit-risk related event were to occur and we were required to net settle our position with an individual counterparty, our ISDA contracts permit us to net all outstanding contracts with that counterparty, whether in a net asset or net liability position, as well as any cash collateral already posted. As of September 30, 2009 if a credit-risk related event were to occur we may be required to post additional collateral. Additionally, although our commodity derivative contracts that contain credit-risk related contingent features were in a net liability position as of September 30, 2009, if a credit-risk related event were to occur, the net liability position would be partially offset by contracts in a net asset position reducing our net liability to \$28.6 million.

As of September 30, 2009 our interest rate swaps were in a net liability position of approximately \$33.6 million, of which, the entire amount is subject to credit-risk related contingent features. If we were to have a default of any of our covenants to our credit agreement, that occurs and is continuing, the counterparties to our swap instruments may have the right to request that we net settle the instrument in the form of cash.

Collateral

As of September 30, 2009, we had an outstanding letter of credit with a counterparty to our commodity derivative instruments of \$10.0 million and DCP Midstream, LLC had issued and outstanding parental guarantees totaling \$83.0 million in favor of certain counterparties to our commodity derivative instruments. This letter of credit and parental guarantees reduce the amount of cash we may be required to post as collateral. As of September 30, 2009, we had no cash collateral posted with counterparties to our commodity derivative instruments.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)****Summarized Derivative Information**

The following summarizes the balance within AOCI relative to our commodity and interest rate cash flow hedges:

	September 30, 2009	December 31, 2008
	(Millions)	
Commodity cash flow hedges:		
Net deferred losses in AOCI	\$ (1.1)	\$ (1.8)
Interest rate cash flow hedges:		
Net deferred losses in AOCI	(32.8)	(38.7)
Total AOCI	\$ (33.9)	\$ (40.5)

The fair value of our derivative instruments that are designated as hedging instruments, those that are marked to market each period, as well as the location of each within our condensed consolidated balance sheets, by major category, is summarized as follows:

Balance Sheet Line Item	September 30, 2009	December 31, 2008	Balance Sheet Line Item	September 30, 2009	December 31, 2008

Unrealized	(1.1)	(0.8)	(3.3)	2.2
Losses from commodity derivative activity, net affiliates	\$ (1.0)	\$ (1.5)	\$ (3.6)	\$ (3.2)

We do not have any derivative financial instruments that qualify as a hedge of a net investment.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

The following table represents, by commodity type, our net long or short positions that are expected to partially or entirely settle in each respective year. To the extent that we have long dated derivative positions that span multiple calendar years, the contract will appear in more than one line item in the table below.

Year of Expiration	September 30, 2009		
	Crude Oil Net Long (Short) Position (Bbls)	Natural Gas Net Long (Short) position (MMBtu)	Natural Gas Liquids Net Long (Short) Position (Bbls)
2009	(225,400)	(830,000)	(97,394)
2010	(950,225)	(2,023,500)	(74,001)
2011	(866,875)	(1,496,500)	
2012	(777,750)	(1,500,600)	
2013	(748,250)	(730,000)	
2014	(365,000)		

We periodically enter into interest rate swap agreements to mitigate our floating rate interest exposure. As of September 30, 2009 we have swaps with a notional value between \$25.0 million and \$150.0 million, which, in aggregate, exchange \$575.0 million of our floating rate obligation to a fixed rate obligation.

12. Partnership Equity and Distributions

General Our partnership agreement requires that, within 45 days after the end of each quarter, we distribute all of our Available Cash (defined below) to unitholders of record on the applicable record date, as determined by our general partner.

In April 2009, we issued 3,500,000 Class D units valued at \$49.7 million. The Class D units were issued to DCP LP Holdings, LP and DCP Midstream GP, LP in consideration for an additional 25.1% interest in East Texas and the NGL Hedge. The Class D units converted into our common units on a one for one basis on August 17, 2009.

In March 2008, we issued 4,250,000 common limited partner units at \$32.44 per unit, and received proceeds of \$132.1 million, net of offering costs.

Definition of Available Cash Available Cash, for any quarter, consists of all cash and cash equivalents on hand at the end of that quarter:

less the amount of cash reserves established by the general partner to:

provide for the proper conduct of our business;

comply with applicable law, any of our debt instruments or other agreements; and

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

provide funds for distributions to the unitholders and to our general partner for any one or more of the next four quarters;

plus, if our general partner so determines, all or a portion of cash and cash equivalents on hand on the date of determination of Available Cash for the quarter.

General Partner Interest and Incentive Distribution Rights The general partner is entitled to a percentage of all quarterly distributions equal to its general partner interest of approximately 1% and limited partner interest of 1% as of September 30, 2009. The general partner has the right, but not the obligation, to contribute a proportionate amount of capital to us to maintain its current general partner interest.

The incentive distribution rights held by the general partner entitle it to receive an increasing share of Available Cash when pre-defined distribution targets are achieved. Currently, our distribution to our general partner related to its incentive distribution rights is at the highest level. The general partner's incentive distribution rights were not reduced as a result of our common limited partner unit issuances, and will not be reduced if we issue additional units in the future and the general partner does not

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

contribute a proportionate amount of capital to us to maintain its current general partner interest. Please read the *Distributions of Available Cash after the Subordination Period* section below for more details about the distribution targets and their impact on the general partner's incentive distribution rights.

Class D Units The Class D Units converted into our common units on a one for one basis on August 17, 2009. The holders of the Class D Units received the second quarter distribution paid on August 14, 2009.

Subordinated Units All of our subordinated units were held by DCP Midstream, LLC. The subordination period had an early termination provision that permitted 50% of the subordinated units, or 3,571,428 units, to convert into common units on a one-to-one basis in February 2008 and permitted the other 50% of the subordinated units, or 3,571,429 units, to convert into common units on a one-to-one basis in February 2009, following the satisfactory completion of the tests for ending the subordination period contained in our partnership agreement. The board of directors of the General Partner certified that all conditions for early conversion were satisfied.

Distributions of Available Cash after the Subordination Period Our partnership agreement, after adjustment for the general partner's relative ownership level, requires that we make distributions of Available Cash from operating surplus for any quarter after the subordination period, which ended in February 2009, in the following manner:

first, to all unitholders and the general partner, in accordance with their pro rata interest, until each unitholder receives a total of \$0.4025 per unit for that quarter;

second, 13% to the general partner, plus the general partner's pro rata interest, and the remainder to all unitholders pro rata until each unitholder receives a total of \$0.4375 per unit for that quarter;

third, 23% to the general partner, plus the general partner's pro rata interest, and the remainder to all unitholders pro rata until each unitholder receives a total of \$0.525 per unit for that quarter; and

thereafter, 48% to the general partner, plus the general partner's pro rata interest, and the remainder to all unitholders.

The following table presents our cash distributions paid in 2009 and 2008:

Payment Date	Per Unit Distribution	Total Cash Distribution (Millions)
August 14, 2009	\$ 0.600	\$ 22.6
May 15, 2009	0.600	20.1
February 13, 2009	0.600	20.1
November 14, 2008	0.600	20.1
August 14, 2008	0.600	20.1
May 15, 2008	0.590	19.6
February 14, 2008	0.570	15.7

13. Net Income or Loss per Limited Partner Unit

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Our net income or loss is allocated to the general partner and the limited partners, including the holders of the subordinated units, through the date of subordinated conversion, in accordance with their respective ownership percentages, after allocating Available Cash generated during the period in accordance with our partnership agreement.

Securities that meet the definition of a participating security are required to be considered for inclusion in the computation of basic earnings per unit using the two-class method. Under the two-class method, earnings per unit is calculated as if all of the earnings for the period were distributed under the terms of the partnership agreement, regardless of whether the general partner has discretion over the amount of distributions to be made in any particular period, whether those earnings would actually be distributed during a particular period from an economic or practical perspective, or whether the general partner has other legal or contractual limitations on its ability to pay distributions that would prevent it from distributing all of the earnings for a particular period.

These required disclosures do not impact our overall net income or loss, or other financial results; however, in periods in which aggregate net income exceeds our Available Cash it will have the impact of reducing net income per LPU.

Table of Contents**DCP MIDSTREAM PARTNERS, LP****NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)****(Unaudited)**

Basic and diluted net income or loss per LPU is calculated by dividing limited partners' interest in net income or loss, less pro forma additional earnings allocated to the general as described above, by the weighted-average number of outstanding LPUs during the period.

The following table illustrates our calculation of net income (loss) per LPU:

	Three Months Ended September 30, 2009		Nine Months Ended September 30, 2009	
	2009	2008	2009	2008
	(Millions)			
Net income (loss) attributable to partners	\$ 9.9	\$ 154.8	\$ (11.1)	\$ 1.8
Net (income) loss attributable to predecessor operations		(2.1)	1.0	(14.9)
Net income (loss) attributable to the partnership	9.9	152.7	(10.1)	(13.1)
General partner interest in net income or net loss	(3.4)	(4.9)	(9.3)	(8.3)
Net income (loss) available to limited partners	\$ 6.5	\$ 147.8	\$ (19.4)	\$ (21.4)
Net income (loss) per LPU – basic and diluted	\$ 0.21	\$ 5.24	\$ (0.63)	\$ (0.79)

14. Commitments and Contingent Liabilities

Litigation We are a party to various legal proceedings, as well as administrative and regulatory proceedings and commercial disputes that have arisen in the ordinary course of our business. Management currently believes that the ultimate resolution of these matters, taken as a whole, and after consideration of amounts accrued, insurance coverage or other indemnification arrangements, will not have a material adverse effect on our condensed consolidated results of operations, financial position, or cash flows. See Note 17 in Item 8 of our 2008 Form 10-K for additional details.

Anderson Gulch In February 2009, the Colorado Department of Public Health and Environment, or CDPHE, issued a Notice of Violation that alleges violations of the air permit at our Anderson Gulch gas plant in 2008. The Anderson Gulch gas plant is owned by Collbran, our 70% owned joint venture in western Colorado. Collbran resolved this matter with the CDPHE and paid \$186,000 in October 2009.

El Paso On February 27, 2009, a jury in the District Court, Harris County, Texas rendered a verdict in favor of El Paso E&P Company, L.P., or El Paso, and against one of our subsidiaries and DCP Midstream, LLC. As previously disclosed, the lawsuit, filed in December 2006, stems from an ongoing commercial dispute involving our Minden processing plant that dates back to August 2000, which includes periods of time prior to our ownership of this asset. Our responsibility for this judgment will be limited to the time period after we acquired the asset from DCP Midstream, LLC in December 2005. During the second quarter of 2009 we filed an appeal in the 14th Court of Appeals, Texas and will continue to defend ourselves vigorously against this claim. El Paso filed an additional lawsuit in the District Court of Webster Parish, Louisiana, claiming damages for the same claims as the Texas matter, but for periods prior to our ownership of the Minden processing plant. The Louisiana court determined in August 2009 that El Paso's Louisiana claims were barred by the doctrine of res judicata and dismissed the case with prejudice in Louisiana. El Paso has appealed this decision. As a result of the jury verdict in the Texas litigation, we recorded a contingent liability of \$2.5 million in the fourth quarter of 2008 for this matter, which is included in other long-term liabilities in the condensed consolidated balance sheets as of September 30, 2009 and in other current liabilities in the condensed consolidated balance sheets as of December 31, 2008.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Indemnification DCP Midstream, LLC has indemnified us for certain potential environmental claims, losses and expenses associated with the operation of the assets of certain of our predecessors. See the Indemnification section of Note 5 in Item 8 of our 2008 Form 10-K for additional details.

Insurance We renewed our insurance policies in May, June and July 2009 for the 2009-2010 insurance year. Previously, we carried insurance jointly with DCP Midstream, LLC. Following our 2009 renewals, we now contract with a third party insurer separately from DCP Midstream, LLC for: (1) automobile liability insurance for all owned, non-owned and hired vehicles; (2)

Table of Contents

DCP MIDSTREAM PARTNERS, LP

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(Unaudited)

excess liability insurance above the established primary limits for general liability and automobile liability insurance; and (3) property insurance, which covers replacement value of all real and personal property and includes business interruption/extra expense. However, we are still jointly insured with DCP Midstream, LLC for directors and officers insurance covering our directors and officers for acts related to our business activities. As a result of separating the excess liability insurance, we have reduced the limits of insurance to match the type and size of exposure covered by this insurance. These changes have not resulted in any material change to the premiums we will pay in the 2009-2010 insurance year. All coverage is subject to certain limits and deductibles, the terms and conditions of which are common for companies that are of similar size to us and with similar types of operations.

Discovery's previous property insurance policy expired in June 2009. Our insurance on Discovery for the 2009-2010 insurance year covers onshore and offshore property, onshore named windstorm and onshore business interruption insurance. The availability of named windstorm insurance has been significantly reduced as a result of higher industry-wide damage claims in past years. Additionally, the named windstorm insurance that is available comes at significantly higher premium amounts, higher deductibles and lower coverage limits. Consequently, Discovery elected to not purchase offshore named windstorm insurance coverage for the 2009-2010 insurance year.

15. Business Segments

Our operations are located in the United States and are organized into three reporting segments: (1) Natural Gas Services; (2) Wholesale Propane Logistics; and (3) NGL Logistics.

Natural Gas Services The Natural Gas Services segment consists of (1) our Northern Louisiana system; (2) our Southern Oklahoma system; (3) our 40% limited liability company interest in Discovery; (4) our Colorado and Wyoming systems; (5) our East Texas system; and (6) our Michigan systems (acquired in October 2008).

Wholesale Propane Logistics The Wholesale Propane Logistics segment consists of five owned and operated rail terminals, one leased marine terminal, one pipeline terminal and access to several open-access pipeline terminals.

NGL Logistics The NGL Logistics segment consists of our Seabreeze and Wilbreeze NGL transportation pipelines, and a non-operated 45% equity interest in the Black Lake interstate NGL pipeline.

These segments are monitored separately by management for performance against our internal forecast and are consistent with internal financial reporting. These segments have been identified based on the differing products and services, regulatory environment and the expertise required for these operations. Gross margin is a performance measure utilized by management to monitor the business of each segment.

- (a) Gross margin consists of total operating revenues, including commodity derivative activity, less purchases of natural gas, propane and NGLs. Gross margin is viewed as a non-GAAP measure under the rules of the SEC, but is included as a supplemental disclosure because it is a primary performance measure used by management as it represents the results of product sales versus product purchases. As an indicator of our operating performance, gross margin should not be considered an alternative to, or more meaningful than, net income or cash flow as determined in accordance with GAAP. Our gross margin may not be comparable to a similarly titled measure of another company because other entities may not calculate gross margin in the same manner.
- (b) Income tax expense relates primarily to the Texas margin tax and the Michigan business tax.
- (c) Non-cash derivative mark-to-market is included in segment gross margin, along with cash settlements for our derivative contracts.
- (d) Other long-term assets not allocable to segments consist of restricted investments, unrealized gains on derivative instruments, corporate leasehold improvements and other long-term assets.

17. Subsequent Events

We have evaluated subsequent events occurring through November 6, 2009, the date the condensed consolidated financial statements were issued.

On October 27, 2009, the board of directors of the General Partner declared a quarterly distribution of \$0.60 per unit, payable on November 13, 2009 to unitholders of record on November 6, 2009.

Table of Contents

Item 2. Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion analyzes our financial condition and results of operations. You should read the following discussion of our financial condition and results of operations in conjunction with our condensed consolidated financial statements and notes included elsewhere in this Form 10-Q and the consolidated financial statements and notes thereto included in our 2008 Form 10-K. In April 2009, we acquired an additional 25.1% membership interest in DCP East Texas Holdings, LLC, or East Texas, and a fixed price natural gas liquids derivative by NGL component for the period of April 2009 to March 2010, or NGL Hedge, from DCP Midstream, LLC, in a transaction among entities under common control. Accordingly, our financial information includes the historical results of East Texas for all periods presented. The NGL Hedge was entered into on the date of the transaction. Accordingly, our financial information includes the results of the NGL Hedge prospectively from April 1, 2009. We refer to the assets, liabilities and operations of East Texas, prior to our acquisition of an additional 25.1% membership interest from DCP Midstream, LLC in April 2009, collectively as our predecessor. Prior to this transaction we owned a 25.0% membership interest in East Texas, which we accounted for under the equity method of accounting. Subsequent to this transaction we own a 50.1% membership interest in East Texas, and account for East Texas as a consolidated subsidiary.

Overview

We are a Delaware limited partnership formed by DCP Midstream, LLC to own, operate, acquire and develop a diversified portfolio of complementary midstream energy assets. We operate in three business segments:

our Natural Gas Services segment, which consists of (1) our Northern Louisiana system; (2) our Southern Oklahoma system; (3) our 40% limited liability company interest in Discovery Producer Services LLC, or Discovery; (4) our Colorado and Wyoming systems; (5) our East Texas system (25.1% of which was acquired in April 2009); and (6) our Michigan systems (acquired in October 2008);

our Wholesale Propane Logistics segment, which consists of five owned and operated rail terminals, one leased marine terminal, one pipeline terminal and access to several open-access pipeline terminals; and

our NGL Logistics segment, which consists of our Seabreeze and Wilbreeze NGL transportation pipelines, and a non-operated 45% equity interest in the Black Lake interstate NGL pipeline.

Recent Events

On October 27, 2009, the board of directors of the General Partner declared a quarterly distribution of \$0.60 per unit, payable on November 13, 2009 to unitholders of record on November 6, 2009.

Our expansion project at our Collbran Valley Gas Gathering, LLC joint venture, or Collbran, was substantially completed and became commercially operational in late September 2009 when Collbran began delivering gas to Enterprise Gas Processing, LLC's pipeline. Installation of additional compression at Collbran is ongoing and is expected to be operational in the fourth quarter.

Factors That Significantly Affect Our Results

Natural Gas Services Segment

Our results of operations for our Natural Gas Services segment are impacted by (1) increases and decreases in the volume of natural gas that we gather and transport through our systems, which we refer to as throughput, (2) the associated Btu content of our system throughput and our related processing volumes, (3) prices of commodities such as NGLs, crude oil and natural gas, (4) the operating efficiency of our processing facilities, and (5) potential limitations on throughput volumes arising from downstream and infrastructure capacity constraints. Throughput and operating efficiency generally are driven by wellhead production, plant recoveries, operating availability of our facilities, physical integrity and our competitive position on a regional basis, and more broadly by demand for natural gas, NGLs and condensate. Historical and current trends in the price changes of commodities may not be indicative of future trends. Throughput and prices are also driven by demand and take-away capacity for residue natural gas and NGLs.

Natural Gas Services segment results of operations are also impacted by the fees we receive and the margins we generate. Our processing contract arrangements can have a significant impact on our profitability and cash flow. Our actual contract terms are based upon a variety of

factors, including natural gas quality, geographic location, the commodity pricing environment at the

Table of Contents

time the contract is executed and customer requirements. Our gathering and processing contract mix and, accordingly, our exposure to natural gas, NGL and condensate prices, may change as a result of producer preferences, impacting our expansion in regions where certain types of contracts are more common, as well as other market factors.

Additionally, our results of operations for our Natural Gas Services segment are impacted by market conditions causing variability in natural gas, crude oil and NGL prices. The midstream natural gas industry is cyclical, with the operating results of companies in the industry significantly affected by the prevailing price of NGLs, which in turn has been generally related to the price of crude oil, except in recent periods, when NGL pricing has been at a greater discount to crude oil pricing. Although the prevailing price of residue natural gas has less short-term significance to our operating results than the price of NGLs, in the long term, the growth and sustainability of our business depends on natural gas prices being at levels sufficient to provide incentives and capital for producers to explore for and produce natural gas. The prices of NGLs, crude oil and natural gas can be extremely volatile for periods of time, and may not always have a close relationship. Due to our hedging program, changes in the relationship of the price of NGLs and crude oil may cause our commodity price sensitivities to vary.

While pricing impacts the Natural Gas Services segment, we have mitigated a portion of the anticipated commodity price risk associated with the equity volumes from our gathering and processing activities, for both our consolidated entities and our proportionate share of exposure from our equity method investment, through 2014 with fixed price natural gas, crude oil and NGL swaps. With these swaps, we expect our cash flow exposure to commodity price movements to be reduced. We also may enter into natural gas derivatives to lock in margin around our transportation or leased storage assets. We mark these derivative instruments to market through current period earnings based upon their fair value. While the swaps may mitigate the variability of our future cash flows resulting from changes in commodity prices, the mark-to-market method of accounting significantly increases the volatility of our net income because we recognize, in current period operating revenues, all non-cash gains and losses from the changes in the fair value of these derivatives. We primarily use crude oil and NGL swaps to mitigate our NGL and condensate commodity price risk. As a result, the volatility of our future cash flows and net income may increase if there is a change in the pricing relationship between crude oil and NGLs. We also continue to have price risk exposure related to the portion of our equity volumes that are not covered by these derivatives and we have financial risk exposure to the extent our actual equity volumes differ from our projections. For additional information regarding our derivative activities, please read Item 7A. Quantitative and Qualitative Disclosures about Market Risk in our 2008 Form 10-K and Item 3. Quantitative and Qualitative Disclosures about Market Risk in this Quarterly Report on Form 10-Q.

Based on historical trends, we generally expect NGL prices to directionally follow changes in crude oil prices over the long term. However, the pricing relationship between NGLs and crude oil may vary, as we believe crude oil prices will in large part be determined by the level of production from major crude oil exporting countries and the demand generated by growth in the world economy, whereas NGL prices are more correlated to supply and U.S. petrochemical demand. We believe that future natural gas prices will be influenced by supply deliverability, the severity of winter and summer weather, and the domestic production and drilling activity level of exploration and production companies. Drilling activity can be adversely affected as natural gas prices decrease. Energy market uncertainty could also further reduce North American drilling activity. Limited access to capital could also decrease drilling. Lower drilling levels over a sustained period would reduce natural gas volumes gathered and processed, but could increase commodity prices, if supply were to fall below demand levels.

In April 2009, we completed the acquisition of an additional 25.1% membership interest in East Texas from DCP Midstream, LLC, which results in us owning a 50.1% membership interest in East Texas. Prior to this transaction, we accounted for our interest in East Texas under the equity method of accounting. As a result of our owning in excess of 50%, and because the transaction was between entities under common control, we are required to present results of operations, including all historical periods, on a consolidated basis. Therefore, these results as presented are different from those originally reported in 2008, which excluded the impact of this transaction.

Additionally, note that while we utilize commodity derivative instruments to provide stability to distributable cash flows for our ownership in East Texas as well as all other natural gas services assets, the portion of East Texas owned by DCP Midstream, LLC is unhedged. As such, our consolidated results depict 75% of East Texas unhedged in all periods prior to the second quarter of 2009 and 49.9% of East Texas unhedged for all periods beginning in the second quarter of 2009.

Wholesale Propane Logistics Segment

Our results of operations for our Wholesale Propane Logistics segment are impacted by our ability to provide our retail propane distribution customers with reliable supplies of propane. We use physical inventory, physical purchase agreements and financial derivative instruments, with DCP Midstream, LLC or third parties, which typically match the quantities of propane subject to fixed price sales agreements to mitigate our commodity price risk. Our results may also be impacted as a result of non-cash

Table of Contents

lower of cost or market inventory adjustments, which occur when the market value of propane declines below our inventory value. We generally recover lower of cost or market inventory adjustments in subsequent periods through the sale of inventory. There may be positive or negative impacts on sales volumes and gross margin from supply disruptions and weather conditions in the Midwest and northeastern areas of the United States. Our annual sales volumes of propane may decline when these areas experience periods of milder weather in the winter months. Volumes may also be impacted by conservation and reduced demand in the current recessionary environment.

NGL Logistics Segment

Our results of operations for our NGL Logistics segment are impacted by the throughput volumes of the NGLs we transport on our NGL pipelines, as we transport NGLs exclusively on a fee basis. Throughput is impacted by natural gas volumes received by processing plants connected to our NGL pipelines and may also be negatively impacted as a result of our customers operating their processing plants in ethane rejection mode. Factors that impact the supply of and demand for NGLs, as described above in our Natural Gas Services segment, may also impact the throughput for our NGL Logistics segment.

Impact of Severe Weather

The economic impact of severe weather may negatively affect the nation's short-term energy supply and demand, and may result in commodity price volatility. Additionally, severe weather may restrict or prevent us from fully utilizing our assets, by damaging our assets, interrupting utilities, and through possible NGL and natural gas curtailments downstream of our facilities, which restricts our production. These impacts may linger past the time of the actual weather event. Severe weather may also impact the supply and demand in our Wholesale Propane Logistics segment. Although we carry insurance on the vast majority of our assets, insurance may be inadequate to cover our loss and in some instances, we may be unable to obtain insurance on commercially reasonable terms, if at all.

Other

The above factors, including further sustained deterioration in commodity prices, volumes or other market declines, including a decline in our unit price, may negatively impact our results of operations, and may increase the likelihood of non-cash goodwill or asset impairment charges, or non-cash lower of cost or market inventory adjustments.

General Trends and Outlook

We expect our business to continue to be affected by the following key trends. Our expectations are based on assumptions made by us and information currently available to us. To the extent our underlying assumptions about or interpretations of available information prove to be incorrect, our actual results may vary materially from our expected results.

Commodity Prices In the fourth quarter of 2008, natural gas, NGL and crude oil prices dropped significantly compared to the first three quarters of 2008. We are continuing to experience relatively lower commodity prices for the three and nine months ended September 30, 2009 as compared to the same periods in 2008. Commodity prices are impacted by demand, which has been negatively impacted by the current recessionary environment.

Natural Gas Supply and Outlook In the near term, softening of natural gas prices, reduced demand for natural gas, potential reduction in producer's available capital and cash flows, and the downturn in the economy is causing a reduction in levels of drilling activity and the associated natural gas throughput volumes. The impact of these factors will vary across our broad geographic locations. Generally, we have seen a decrease in drilling levels in the first three quarters of 2009 compared to the same period in 2008. To date, we have experienced lower gas throughput volumes at certain of our natural gas assets. Throughput volumes could decline further should natural gas prices and reduced drilling levels remain at current levels. Our long-term view is that as economic conditions improve, natural gas prices will return to a level that would support the relatively higher levels of natural gas-related drilling experienced in past years in the United States, as producers seek to increase their level of natural gas production.

Our Operations

We manage our business and analyze and report our results of operations on a segment basis. Our operations are divided into our Natural Gas Services segment, our Wholesale Propane Logistics segment and our NGL Logistics segment.

Table of Contents

Natural Gas Services Segment

Results of operations from our Natural Gas Services segment are determined primarily by the volumes of natural gas gathered, compressed, treated, processed, transported and sold through our gathering, processing and pipeline systems; the volumes of NGLs and condensate sold; and the level of our realized natural gas, NGL and condensate prices. We generate our revenues and our gross margin for our Natural Gas Services segment principally from contracts that contain a combination of the following arrangements:

Fee-based arrangements Under fee-based arrangements, we receive a fee or fees for one or more of the following services: gathering, compressing, treating, processing or transporting natural gas; and transporting NGLs. Our fee-based arrangements include natural gas purchase arrangements pursuant to which we purchase natural gas at the wellhead or other receipt points, at an index related price at the delivery point less a specified amount, generally the same as the transportation fees we would otherwise charge for transportation of natural gas from the wellhead location to the delivery point. The revenues we earn are directly related to the volume of natural gas or NGLs that flows through our systems and are not directly dependent on commodity prices. However, to the extent a sustained decline in commodity prices results in a decline in volumes, our revenues from these arrangements would be reduced.

Percent-of-proceeds arrangements Under percent-of-proceeds arrangements, we generally purchase natural gas from producers at the wellhead, or other receipt points, gather the wellhead natural gas through our gathering system, treat and process the natural gas, and then sell the resulting residue natural gas and NGLs based on index prices from published index market prices. We remit to the producers either an agreed-upon percentage of the actual proceeds that we receive from our sales of the residue natural gas and NGLs, or an agreed-upon percentage of the proceeds based on index related prices for the natural gas and the NGLs, regardless of the actual amount of the sales proceeds we receive. Certain of these arrangements may also result in our returning all or a portion of the residue natural gas and/or the NGLs to the producer, in lieu of returning sales proceeds. Our revenues under percent-of-proceeds arrangements correlate directly with the price of natural gas and/or NGLs.

In addition to the above contract types, Discovery also generates equity earnings for our Natural Gas Services segment under keep-whole arrangements. Under the terms of a keep-whole processing contract, Discovery gathers natural gas from the producer for processing, sells the NGLs and returns to the producer residue natural gas with a Btu content equivalent to the Btu content of the natural gas gathered. This arrangement keeps the producer whole to the thermal value of the natural gas received. Under this type of contract, Discovery is exposed to the frac spread. The frac spread is the difference between the value of the NGLs extracted from processing and the value of the Btu equivalent of the residue natural gas. We benefit in periods when NGL prices are higher relative to natural gas prices when that frac spread exceeds the operating costs of Discovery. Fluctuations in commodity prices are expected to continue to impact the operating costs of these entities.

The natural gas supply for our gathering pipelines and processing plants is derived primarily from natural gas wells located in Colorado, Louisiana, Michigan, Oklahoma, Texas, Wyoming and the Gulf of Mexico. The Pelico system also receives natural gas produced in Texas through its interconnect with other pipelines that transport natural gas from Texas into western Louisiana. These areas have experienced significant levels of drilling activity, providing us with opportunities to access newly developed natural gas supplies. We identify primary suppliers as those individually representing 10% or more of our total natural gas supply. Our one primary supplier of natural gas in our Natural Gas Services segment represented approximately 16% of the 962 MMcf/d of natural gas supplied to our systems during the nine months ended September 30, 2009. We actively seek new supplies of natural gas, both to offset natural declines in the production from connected wells and to increase throughput volume. We obtain new natural gas supplies in our operating areas by contracting for production from new wells, connecting new wells drilled on dedicated acreage, or by obtaining natural gas that has been directly received by or released from other gathering systems. Currently, due to the decline in producer drilling in various areas in which we operate, new well connections have been limited.

We sell natural gas to marketing affiliates of natural gas pipelines, marketing affiliates of integrated oil companies, marketing affiliates of DCP Midstream, LLC, national wholesale marketers, industrial end-users and gas-fired power plants. We typically sell natural gas under market index related pricing terms. The NGLs extracted from the natural gas at our processing plants are sold at market index prices to DCP Midstream, LLC or its affiliates, or to third parties. In addition, under our merchant arrangements, we use a subsidiary of DCP Midstream, LLC as our agent to purchase natural gas from third parties at pipeline interconnect points, as well as residue gas from our Minden and Ada processing plants, and then resell the aggregated natural gas to third parties.

Table of Contents

In January 2009, we amended our Pelico gas purchase and sales agreement with DCP Midstream, LLC. As a result of the amendment, our purchases from DCP Midstream, LLC occur upstream of Pelico, rather than at the inlet of Pelico. We assumed from DCP Midstream, LLC a firm transportation agreement with an affiliate to transport our natural gas purchases from DCP Midstream, LLC to Pelico. In addition, historically, the sales price of a portion of the natural gas we sold to DCP Midstream, LLC was determined based on the price at which we purchased the natural gas from DCP Midstream, LLC plus a portion of the index differential between upstream sources to certain downstream indices with a maximum and minimum differential. Accordingly, DCP Midstream, LLC purchases natural gas and we buy the gas from DCP Midstream, LLC at the actual acquisition cost plus transportation service charges incurred. For volumes supplied to certain industrial end users and any volumes in excess of the on-system demand, DCP Midstream, LLC will purchase natural gas from us and sell it to certain industrial end users, or transport it to sales points at an index-based price less contractually agreed to marketing fees. To the extent possible, we match the pricing of our supply portfolio to our sales portfolio in order to lock in value and reduce our overall commodity price risk. We manage the commodity price risk of our supply portfolio and sales portfolio with both physical and financial transactions. As a service to our customers, we may enter into physical fixed price natural gas purchases and sales, utilizing financial derivatives to swap this fixed price risk back to market index. We may enter into financial derivatives to lock in price differentials across the Pelico system to maximize the value of pipeline capacity. We also gather, process and transport natural gas under fee-based transportation contracts.

Wholesale Propane Logistics Segment

We operate a wholesale propane logistics business in the Midwest and northeastern United States. We purchase large volumes of propane supply from natural gas processing plants and fractionation facilities, and crude oil refineries, primarily located in the Texas and Louisiana Gulf Coast area, Canada and other international sources, and transport these volumes of propane supply by pipeline, rail or ship to our terminals and storage facilities in the Midwest and the northeastern areas of the United States. We identify primary suppliers as those individually representing 10% or more of our total propane supply. Our three primary suppliers of propane, two of which are affiliated entities, represented approximately 96% of our propane supplied during the nine months ended September 30, 2009. We sell propane on a wholesale basis to retail propane distributors who in turn resell propane to their retail customers.

Due to our multiple propane supply sources, annual and long-term propane supply purchase arrangements, significant storage capabilities, and multiple terminal locations for wholesale propane delivery, we are generally able to provide our retail propane distribution customers with reliable supplies of propane during periods of tight supply, such as the winter months when their retail customers generally consume the most propane for home heating. In particular, we generally offer our customers the ability to obtain propane supply volumes from us in the winter months that are generally significantly greater than their purchase of propane from us in the summer. We believe these factors allow us to maintain our generally favorable relationships with our customers.

We manage our wholesale propane margins by selling propane to retail propane distributors under annual sales agreements negotiated each spring that specify floating price terms, which provide us a margin in excess of our floating index-based supply costs under our supply purchase arrangements. Our portfolio of multiple supply sources and storage capabilities allows us to actively manage our propane supply purchases and to lower the aggregate cost of supplies. Based on the carrying value of our inventory, timing of inventory transactions and the volatility of the market value of propane, we have historically and may continue to periodically recognize non-cash lower of cost or market inventory adjustments. In addition, we may use financial derivatives to manage the value of our propane inventories.

NGL Logistics Segment

Our pipelines provide transportation services for customers on a fee basis. We have entered into contractual arrangements with DCP Midstream, LLC that require DCP Midstream, LLC to pay us to transport NGLs pursuant to a fee-based rate that is applied to the volumes transported. Therefore, the results of operations for this business segment are generally dependent upon the volume of product transported and the level of fees charged to customers. We do not take title to the products transported on our NGL pipelines; rather, the shipper retains title and the associated commodity price risk. For the Seabreeze and Wilbreeze pipelines, we are responsible for any line loss or gain in NGLs. DCP Midstream, LLC provides 100% of volumes transported on the Seabreeze and Wilbreeze pipelines. For the Black Lake pipeline, any line loss or gain in NGLs is allocated to the shipper. The volumes of NGLs transported on our pipelines are dependent on the level of production of NGLs from processing plants connected to our NGL pipelines. When natural gas prices are high relative to NGL prices, it is less profitable to process natural gas because of the higher value of natural gas compared to the value of NGLs and because of the increased cost of separating the NGLs from the natural gas. As a result, we have experienced periods in the past, in which higher natural gas prices reduce the volume of NGLs extracted at plants connected to our NGL pipelines and, in turn, lower the NGL throughput on our assets. In the markets we serve, our pipelines are the sole pipeline facility transporting NGLs from the supply source.

Table of Contents

How We Evaluate Our Operations

Our management uses a variety of financial and operational measurements to analyze our performance. These measurements include the following: (1) volumes; (2) gross margin, segment gross margin and adjusted segment gross margin; (3) operating and maintenance expense, and general and administrative expense; (4) adjusted EBITDA; and (5) distributable cash flow. Gross margin, segment gross margin, adjusted segment gross margin, adjusted EBITDA and distributable cash flow measurements are not accounting principles generally accepted in the United States of America, or GAAP, financial measures. We provide reconciliations of certain non-GAAP measures to their most directly comparable financial measures as calculated and presented in accordance with GAAP. These non-GAAP measures may not be comparable to a similarly titled measure of another company because other entities may not calculate these non-GAAP measures in the same manner.

Volumes We view throughput volumes for our Natural Gas Services segment and our NGL Logistics segment, and sales volumes for our Wholesale Propane Logistics segment, as important factors affecting our profitability. We gather and transport some of the natural gas and NGLs under fee-based transportation contracts. Revenue from these contracts is derived by applying the rates stipulated to the volumes transported. Pipeline throughput volumes from existing wells connected to our pipelines will naturally decline over time as wells deplete. Accordingly, to maintain or to increase throughput levels on these pipelines and the utilization rate of our natural gas processing plants, we must continually obtain new supplies of natural gas and NGLs. Our ability to maintain existing supplies of natural gas and NGLs and obtain new supplies are impacted by: (1) the level of workovers or recompletions of existing connected wells and successful drilling activity in areas currently dedicated to our pipelines; and (2) our ability to compete for volumes from successful new wells in other areas. The throughput volumes of NGLs on our pipelines are substantially dependent upon the quantities of NGLs produced at our processing plants, as well as NGLs produced at other processing plants that have pipeline connections with our NGL pipelines. We regularly monitor producer activity in the areas we serve and in which our pipelines are located, and pursue opportunities to connect new supply to these pipelines.

Gross Margin, Segment Gross Margin and Adjusted Segment Gross Margin We view our gross margin as an important performance measure of the core profitability of our operations. We review our gross margin monthly for consistency and trend analysis.

We define gross margin as total operating revenues less purchases of natural gas, propane and NGLs, and we define segment gross margin for each segment as total operating revenues for that segment less commodity purchases for that segment. Our gross margin equals the sum of our segment gross margins. We define adjusted segment gross margin as segment gross margin plus non-cash derivative losses, less non-cash derivative gains for that segment. Gross margin, segment gross margin and adjusted segment gross margin are primary performance measures used by management, as these measures represent the results of product sales and purchases, a key component of our operations. As an indicator of our operating performance, gross margin, segment gross margin and adjusted segment gross margin should not be considered an alternative to, or more meaningful than, net income or loss, operating income, cash flows from operating activities or any other measure of financial performance presented in accordance with GAAP.

Table of Contents

Our gross margin, segment gross margin and adjusted segment gross margin may not be comparable to a similarly titled measure of another company because other entities may not calculate these measures in the same manner. The following table sets forth our reconciliation of certain non-GAAP measures:

Operating and maintenance expense	0.4	0.4	0.9	0.8

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Depreciation and amortization expense	0.3	0.4	1.1	1.1
Earnings from equity method investment	(0.5)	(0.3)	(1.3)	(0.9)
Segment gross margin	\$ 1.9	\$ 1.6	\$ 4.5	\$ 5.4

- (a) Non-cash derivative mark-to-market from commodity derivative activity is included in segment gross margin, along with cash settlements for our derivative contracts.

Operating and Maintenance and General and Administrative Expense Operating and maintenance expense are costs associated with the operation of a specific asset. Direct labor, ad valorem taxes, repairs and maintenance, lease expenses, utilities and contract services comprise the most significant portion of our operating and maintenance expense. These expenses are relatively independent of the volumes through our systems, but may fluctuate depending on the activities performed during a specific period.

A substantial amount of our general and administrative expense is incurred from DCP Midstream, LLC. We have entered into an omnibus agreement, as amended, or the Omnibus Agreement, with DCP Midstream, LLC. Under the Omnibus Agreement, we are required to reimburse DCP Midstream, LLC for certain costs incurred and centralized corporate functions performed by DCP Midstream, LLC on our behalf. We anticipate incurring a total of \$9.7 million for all fees under the Omnibus Agreement in 2009. We incurred \$2.5 million and \$2.4 million, respectively, for the three months ended September 30, 2009 and 2008 and \$7.3 million for both the nine months ended September 30, 2009 and 2008, for all fees under the Omnibus Agreement.

Table of Contents

The Omnibus Agreement also addresses the following matters:

DCP Midstream, LLC's obligation to indemnify us for certain liabilities and our obligation to indemnify DCP Midstream, LLC for certain liabilities;

DCP Midstream, LLC's obligation to continue to maintain its credit support for certain obligations related to derivative financial instruments, such as commodity derivative instruments, to the extent that such credit support arrangements were in effect as of December 7, 2005 until the earlier of December 7, 2010 or when we obtain certain credit ratings from either Moody's Investor Services, Inc. or Standard & Poor's Ratings Group with respect to any of our unsecured indebtedness; and

DCP Midstream, LLC's obligation to continue to maintain its credit support for our obligations related to commercial contracts with respect to its business or operations that were in effect at December 7, 2005 until the expiration of such contracts.

All of the fees under the Omnibus Agreement will be adjusted annually on January 1 by the percentage change in the Consumer Price Index for the applicable year. In addition, our general partner will have the right to agree to further increases in connection with expansions of our operations through the acquisition or construction of new assets or businesses, with the concurrence of the special committee of DCP Midstream GP, LLC's board of directors.

The Omnibus Agreement was not amended following our acquisition of an additional 25.1% membership interest in East Texas on April 1, 2009. East Texas incurs general and administrative expenses directly from DCP Midstream, LLC. During the three months ended September 30, 2009 and 2008 East Texas incurred \$2.0 million and \$2.3 million, respectively, and during both the nine months ended September 30, 2009 and 2008 East Texas incurred \$6.4 million, for general and administrative expenses from DCP Midstream, LLC.

Outside of the Omnibus Agreement and amounts incurred by East Texas, we incurred other fees with DCP Midstream, LLC of \$0.4 million for both the three months ended September 30, 2009 and 2008 and \$1.6 million and \$1.3 million, respectively, for the nine months ended September 30, 2009 and 2008. These amounts include allocated expenses, including professional services, insurance and internal audit.

We also incurred third party general and administrative expenses, which were primarily related to compensation and benefit expenses of the personnel who provide direct support to our operations. Also included are expenses associated with annual and quarterly reports to unitholders, tax return and Schedule K-1 preparation and distribution, independent auditor fees, due diligence and acquisition costs, costs associated with the Sarbanes-Oxley Act of 2002, investor relations activities, registrar and transfer agent fees, incremental director and officer liability insurance costs, and director compensation.

Discovery pays fees to Williams Partners L.P., for direct general and administrative costs incurred on its behalf. These fees reduce the amount of cash available from Discovery for distribution to us.

Adjusted EBITDA and Distributable Cash Flow We define adjusted EBITDA as net income or loss attributable to partners less interest income, noncontrolling interest in depreciation and income tax expense and non-cash commodity derivative gains, plus interest expense, income tax expense, depreciation and amortization expense and non-cash commodity derivative losses. Adjusted EBITDA is used as a supplemental liquidity and performance measure by our management and by external users of our financial statements, such as investors, commercial banks, research analysts and others, to assess:

the ability of our assets to generate cash sufficient to pay interest costs, support our indebtedness, make cash distributions to our unitholders and general partner, and finance maintenance capital expenditures;

financial performance of our assets without regard to financing methods, capital structure or historical cost basis;

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

our operating performance and return on capital as compared to those of other companies in the midstream energy industry, without regard to financing methods or capital structure; and

viability of acquisitions and capital expenditure projects and the overall rates of return on alternative investment opportunities. Our adjusted EBITDA may not be comparable to a similarly titled measure of another company because other entities may not calculate these measures in the same manner.

Table of Contents

Adjusted EBITDA should not be considered an alternative to, or more meaningful than, net income or loss, operating income, cash flows from operating activities or any other measure of financial performance presented in accordance with GAAP as measures of operating performance, liquidity or ability to service debt obligations.

We define distributable cash flow as net cash provided by or used in operating activities, less maintenance capital expenditures, net of reimbursable projects, plus or minus adjustments for non-cash mark-to-market of derivative instruments, proceeds from divestiture of assets, noncontrolling interest on depreciation, net changes in operating assets and liabilities, and other adjustments to reconcile net cash provided by or used in operating activities (see [Liquidity and Capital Resources](#) for further definition of maintenance capital expenditures). Maintenance capital expenditures are capital expenditures made where we add on to or improve capital assets owned, or acquire or construct new capital assets, if such expenditures are made to maintain, including over the long term, our operating capacity or revenues. Non-cash mark-to-market of derivative instruments is considered to be non-cash for the purpose of computing distributable cash flow because settlement will not occur until future periods, and will be impacted by future changes in commodity prices. Distributable cash flow is used as a supplemental liquidity measure by our management and by external users of our financial statements, such as investors, commercial banks, research analysts and others, to assess our ability to make cash distributions to our unitholders and our general partner. Our distributable cash flow may not be comparable to a similarly titled measure of another company because other entities may not calculate distributable cash flow in the same manner.

Critical Accounting Policies and Estimates

Our critical accounting policies and estimates are described in Item 7 in our 2008 Form 10-K. The accounting policies and estimates used in preparing our interim condensed consolidated financial statements for the nine months ended September 30, 2009 are the same as those described in our 2008 Form 10-K.

Table of Contents**Results of Operations****Consolidated Overview**

The following table and discussion is a summary of our consolidated results of operations for the three and nine months ended September 30, 2009 and 2008. The results of operations by segment are discussed in further detail following this consolidated overview discussion:

	Three Months Ended September 30,		Nine Months Ended September 30,		Variance Three Months 2009 vs. 2008 Increase (Decrease) Percent		Variance Nine Months 2009 vs. 2008 Increase (Decrease) Percent

* Percentage change is not meaningful.

(a) Includes the results of MPP since October 1, 2008, the date of acquisition.

(b) In April 2009, we completed the acquisition of an additional 25.1% membership interest in East Texas from DCP Midstream, LLC, which results in us owning a 50.1% membership interest in East Texas. Prior to this transaction, we accounted for our interest in East Texas under the equity method of accounting. As a result of our owning in excess of 50%, and because the transaction was between entities under common control, we are required to present results of operations, including all historical periods, on a consolidated basis. Therefore, these results as presented are different from those originally reported in 2008, which excluded the impact of this transaction.

Additionally, while we utilize commodity derivative instruments to provide stability to distributable cash flows for our ownership in East Texas as well as all other natural gas services assets, the portion of East Texas owned by DCP Midstream, LLC is unhedged. As such, our consolidated results depict 75% of East Texas unhedged in all periods prior to the second quarter of 2009 and 49.9% of East Texas unhedged for all periods subsequent to the first quarter of 2009.

Table of Contents

Our gross margin for our Natural Gas Services segment changed from \$174.9 million and \$26.2 million as previously reported in 2008, to \$198.8 million and \$130.0 million as currently reported, for the three and nine months ended September 30, 2008, respectively.

- (c) Includes the effect of the acquisition of the NGL Hedge, contributed by DCP Midstream, LLC in April 2009. The NGL Hedge is a fixed price natural gas liquids derivative by NGL component for the period April 2009 to March 2010.
- (d) Gross margin consists of total operating revenues, including commodity derivative activity, less purchases of natural gas, propane and NGLs, and segment gross margin for each segment consists of total operating revenues for that segment, less commodity purchases for that segment. Please read *How We Evaluate Our Operations* above.
- (e) Includes our proportionate share of the throughput volumes and NGL production of Collbran, Jackson Pipeline Company, or Jackson, East Texas, Black Lake and Discovery and our proportionate earnings of Black Lake and Discovery. Earnings for Discovery and Black Lake include the amortization of the net difference between the carrying amount of the investments and the underlying equity of the investments.

Three Months Ended September 30, 2009 vs. Three Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$177.3 million decrease primarily attributable to decreased commodity prices and a decrease in natural gas sales volumes across certain assets, partially offset by increased NGL and condensate sales volumes. 2008 results were significantly impacted by hurricanes and operational downtime, for our Natural Gas Services segment;

\$138.7 million decrease related to commodity derivative activity, resulting from a gain of \$3.4 million in 2009 and gain of \$142.1 million in 2008, included in gains from commodity derivative activity, which total to a decrease in gains of \$138.7 million. This decrease in gains is the result of a decrease in unrealized gains of \$154.0 million due to forward prices of commodities in 2009 compared to a decline in forward prices of commodities in 2008, partially offset by an increase in realized cash settlement gains of \$15.3 million due to generally lower average prices of commodities in 2009;

\$33.5 million decrease primarily attributable to lower propane prices, which impact both sales and purchases, partially offset by increased sales volumes which impact both sales and purchases, for our Wholesale Propane Logistics segment; and

\$0.8 million decrease primarily attributable to lower commodity prices, for our NGL Logistics segment.

These decreases were partially offset by:

\$3.9 million increase in transportation, processing and other revenue, primarily attributable to increased fee-based throughput volumes due to the MPP acquisition in our Natural Gas Services segment.

Gross Margin Gross margin decreased in 2009 compared to 2008, primarily due to the following:

\$151.5 million decrease for our Natural Gas Services segment primarily due to decreases related to commodity derivative activity, lower commodity prices, lower gas volumes across certain assets, as well as lower processing margins. These decreases are partially offset by increased fee-based throughput volumes due to the MPP acquisition, as well as NGL and condensate volumes across certain assets. 2008 results were significantly impacted by hurricanes and operational downtime.

This decrease was partially offset by:

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

\$4.3 million increase for our Wholesale Propane Logistics segment, primarily as a result of increased volumes and margins in 2009. 2008 results include \$3.0 million in unfavorable non-cash lower of cost or market inventory adjustments; and

Table of Contents

\$0.3 million increase for our NGL Logistics segment, primarily attributable to increased throughput volumes and margins.

Operating and Maintenance Expense Operating and maintenance expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives and a \$1.0 million reimbursement from DCP Midstream, LLC for insurance deductibles relating to the fire at East Texas in the first quarter of 2009, partially offset by increased expenses as a result of the MPP acquisition.

General and Administrative Expense General and administrative expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives, partially offset by the MPP acquisition.

Earnings from Equity Method Investments Earnings from equity method investments increased in 2009 compared to 2008, primarily due to increased equity earnings from Discovery. Settlements related to our commodity derivatives on our equity method investments are included in segment gross margin.

Noncontrolling Interest in Income Noncontrolling interest in income in 2008 represents the noncontrolling interest holders' portion of the net income of East Texas and our Collbran joint ventures. 2009 also includes the noncontrolling interest holders' portion of the net income of Jackson, acquired in the MPP acquisition. The decrease in 2009 primarily relates to lower earnings at East Texas.

Depreciation and Amortization Expense Depreciation and amortization expense increased in 2009 compared to 2008, primarily as a result of the MPP acquisition and our East Texas and Wyoming capital projects.

Nine Months Ended September 30, 2009 vs. Nine Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$636.6 million decrease primarily attributable to decreased commodity prices and a decrease in natural gas sales volumes across certain assets. 2008 results were significantly impacted by hurricanes and operational downtime for our Natural Gas Services segment;

\$149.9 million decrease primarily attributable to lower propane prices, which impact both sales and purchases, partially offset by increased sales volumes, for our Wholesale Propane Logistics segment; and

\$2.1 million decrease due primarily to lower throughput volumes partially resulting from ethane rejection at certain connected processing plants during the first quarter of 2009 and lower commodity prices, which impact both sales and purchases, for our NGL Logistics segment.

These decreases were partially offset by:

\$46.6 million increase related to commodity derivative activity, resulting from a loss of \$35.5 million in 2009 and a loss of \$82.3 million in 2008, included in losses from commodity derivative activity, which total a decrease in losses of \$46.8 million. This decrease in losses includes an increase in realized cash settlement gains of \$55.8 million due to generally lower average prices of commodities in 2009, partially offset by an increase in unrealized losses of \$9.0 million due to forward prices of commodities increasing in 2009 compared to 2008. We also had a \$0.2 million increase in unrealized losses, which is included in sales of natural gas, NGLs and condensate; and

\$8.4 million increase in transportation processing and other revenue, primarily attributable to increased fee-based throughput volumes due to the MPP acquisition.

Gross Margin Gross margin decreased in 2009 compared to 2008, primarily due to the following:

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

\$45.7 million decrease for our Natural Gas Services segment primarily due to lower commodity prices and lower natural gas volumes and NGL production. These decreases include the impact of a fire at East Texas in the first quarter of 2009, as well as lower processing margins. The decreases were partially offset by increases related to commodity derivative activity and increased fee-based throughput volumes due to the MPP acquisition. 2008 results were significantly impacted by hurricanes and operational downtime; and

Table of Contents

\$0.9 million decrease for our NGL Logistics segment, primarily due to decreased throughput volumes partly resulting from ethane rejection at certain connected processing plants during the first quarter of 2009.

These decreases were partially offset by:

\$24.9 million increase for our Wholesale Propane Logistics segment as a result of increased volumes and margins, a portion of which was attributable to the sale of inventory that was written down at the end of the fourth quarter of 2008, as well as gains related to commodity derivative activity.

Operating and Maintenance Expense Operating and maintenance expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives, partially offset by increased expenses as a result of the MPP acquisition.

General and Administrative Expense General and administrative expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives, partially offset by the MPP acquisition.

Earnings from Equity Method Investments Earnings from equity method investments decreased in 2009 compared to 2008, primarily due to decreased earnings from Discovery. Settlements related to our commodity derivatives on our equity method investments are included in segment gross margin.

Noncontrolling Interest in Income Noncontrolling interest in income in 2008 represents the noncontrolling interest holders' portion of the net income or loss of our East Texas and Collbran joint ventures. 2009 also includes the noncontrolling interest holders' portion of the net income of Jackson, acquired in the MPP acquisition. The decrease in 2009 primarily relates to lower earnings at East Texas.

Depreciation and Amortization Expense Depreciation and amortization expense increased in 2009 compared to 2008, primarily as a result of the MPP acquisition and our East Texas and Wyoming capital projects.

Table of Contents**Results of Operations Natural Gas Services Segment**

This segment consists of our Northern Louisiana system, the Southern Oklahoma system, a 40% limited liability company interest in Discovery, our Colorado and Wyoming systems, our East Texas system, and our Michigan systems acquired in October 2008.

	Three Months Ended September 30,		Nine Months Ended September 30,		Variance Three Months 2009 vs. 2008		Variance Nine Months 2009 vs. 2008

NGL gross production (Bbls/d) (e)	30,843	24,824	27,086	29,409	6,019	24%	(2,323)	(8)%

(a) Includes the results of MPP since October 1, 2008, the date of acquisition.

(b) In April 2009, we completed the acquisition of an additional 25.1% interest in East Texas from DCP Midstream, LLC, which results in us owning a 50.1% interest in East Texas. Prior to this transaction, we accounted for our interest in East Texas under the equity method of accounting. As a result of our owning in excess of 50%, and because the transaction was between entities under common control, we are required to present results of operations, including all historical periods, on a consolidated basis. Therefore, these results as presented are different from those originally reported in 2008, which excluded the impact of this transaction.

Additionally, while we utilize commodity derivative instruments to provide stability to distributable cash flows for our ownership in East Texas as well as all other natural gas services assets, the portion of East Texas owned by DCP Midstream, LLC is unhedged. As such, our consolidated results depict 75% of East Texas unhedged in all periods prior to the second quarter of 2009 and 49.9% of East Texas unhedged for all periods subsequent to the first quarter of 2009.

Our gross margin for our Natural Gas Services segment changed from \$174.9 million and \$26.2 million as previously reported in 2008, to \$198.8 million and \$130.0 million as currently reported, for the three and nine months ended September 30, 2008, respectively.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

- (c) Includes the effect of the acquisition of the NGL Hedge, contributed by DCP Midstream, LLC in April 2009. The NGL Hedge is a fixed price natural gas liquids derivative by NGL component for the period April 2009 to March 2010.

Table of Contents

- (d) Segment gross margin consists of total operating revenues, including commodity derivative activity, less purchases of natural gas and NGLs. Please read *How We Evaluate Our Operations* above.
- (e) Includes our proportionate share of the throughput volumes and NGL production of Collbran, Jackson, East Texas and Discovery and our proportionate share of the earnings of Discovery for each period presented. Earnings for Discovery include the amortization of the net difference between the carrying amount of the investment and the underlying equity of the investment.

Three Months Ended September 30, 2009 vs. Three Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$198.4 million decrease attributable to decreased commodity prices, which impact both sales and purchases, and includes the results of East Texas for which the portion owned by DCP Midstream, LLC is unhedged;

\$138.7 million decrease related to commodity derivative activity, resulting from a gain of \$2.8 million in 2009 and a gain of \$141.5 million in 2008, included in gains from commodity derivative activity, which total to a decrease in gains of \$138.7 million. This decrease in gains includes a decrease in unrealized gains of \$154.4 million due to forward prices of commodities in 2009 compared to a decline in forward prices of commodities in 2008, partially offset by an increase in realized cash settlement gains of \$15.7 million due to generally lower average prices of commodities in 2009.

These decreases were partially offset by:

\$21.1 million increase, due to an increase in NGL and condensate sales volumes and increased Pelico revenues resulting from a January 1, 2009 amendment to a contract with an affiliate such that certain Pelico revenues changed from a net presentation to a gross presentation. 2008 results were significantly impacted by the effects of hurricanes and operational downtime, as well as curtailed volumes due to a pipeline integrity and system enhancement project at our Wyoming system. These increases were partially offset by a decrease in natural gas sales volumes across certain assets; and

\$3.5 million increase in transportation, processing and other revenue, primarily as a result of increased fee-based throughput volumes due to the MPP acquisition.

Purchases of Natural Gas and NGLs Purchases of natural gas and NGLs decreased in 2009 compared to 2008, primarily due to lower costs of natural gas supply, driven by lower commodity prices, partially offset by an amendment to a contract with an affiliate, which resulted in a prospective change in certain Pelico purchases from a net presentation to a gross presentation.

Segment Gross Margin Segment gross margin decreased in 2009 compared to 2008, primarily as a result of the following:

\$138.7 million decrease related to commodity derivative activity, as discussed in the Operating Revenues section above; and

\$29.6 million decrease due to lower commodity prices, which includes the results of East Texas for which the portion owned by DCP Midstream, LLC is unhedged.

These decreases were partially offset by:

\$11.3 million increase due to increased NGL and condensate volumes, partially offset by lower gas volumes at certain assets, as well as lower processing margins. 2008 results include the effects of hurricanes and operational downtime, as well as curtailed volumes due to a pipeline integrity and system enhancement project at our Wyoming system; and

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

\$5.5 million increase primarily as a result of increased fee-based throughput volumes due to the MPP acquisition.

Operating and Maintenance Expense Operating and maintenance expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives and a \$1.0 million reimbursement from DCP Midstream, LLC for insurance deductibles relating to the fire at East Texas in the first quarter of 2009, partially offset by increased expenses as a result of the MPP acquisition.

Table of Contents

Depreciation and Amortization Expense Depreciation and amortization expense increased in 2009 compared to 2008, primarily as a result of the MPP acquisition and our East Texas and Wyoming capital projects.

Earnings from Equity Method Investment Earnings from equity method investment, representing our 40% ownership of Discovery, increased in 2009 compared to 2008. Settlements related to our commodity derivatives on our equity method investment are included in segment gross margin. Increased equity earnings were primarily as a result of the following variances in earnings drivers, representing 100% of Discovery's results of operations: an increase in Discovery's net income of \$4.7 million, or 34%, due primarily to \$5.1 million lower operating and maintenance expense and \$4.9 million higher transportation and gathering revenue. These decreases were partially offset by \$2.0 million lower NGL sales margins resulting from lower average per-unit margins on higher volumes, and higher general and administrative expense and depreciation and accretion expense.

Noncontrolling Interest in Income Noncontrolling interest in income in 2008 represents the noncontrolling interest holders' portion of the net income of our East Texas and Collbran joint ventures. 2009 also includes the noncontrolling interest holders' portion of the net income of Jackson, acquired in the MPP acquisition. The decrease in 2009 primarily relates to lower earnings at East Texas.

Natural gas volumes transported, processed and/or treated increased in 2009 compared to 2008, due primarily to increased fee-based throughput from the MPP acquisition and Discovery, partially offset by decreased volumes across certain other systems. NGL production increased in 2009 compared to 2008, due primarily to increased NGL production at Discovery and East Texas. 2008 results include the impact of hurricanes, operational downtime, as well as a pipeline integrity and system enhancement project at our Wyoming system.

Nine Months Ended September 30, 2009 vs. Nine Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$567.6 million decrease attributable to decreased commodity prices, which impact both sales and purchases, and includes the results of East Texas for which the portion owned by DCP Midstream, LLC is unhedged; and

\$69.0 million decrease due primarily to a decrease in natural gas sales volumes across certain assets, partially offset by increased Pelico revenues due to a January 1, 2009 amendment to a contract with an affiliate such that certain Pelico revenues changed from a net presentation to a gross presentation. 2008 results were significantly impacted by hurricanes and operational downtime, as well as curtailed volumes due to a pipeline integrity and system enhancement project at our Wyoming system.

These decreases were partially offset by:

\$45.6 million increase related to commodity derivative activity, resulting from a loss of \$36.0 million in 2009 and a loss of \$81.8 million in 2008, included in losses from commodity derivative activity, which total to a decrease in losses of \$45.8 million. This decrease in losses includes an increase in realized cash settlement gains of \$52.8 million due to generally lower average prices of commodities in 2009, partially offset by an increase in unrealized losses of \$7.0 million due to forward prices of commodities increasing in 2009 compared to 2008. We also had a \$0.2 million increase in unrealized loss, which is included in sales of natural gas, NGLs and condensate; and

\$9.3 million increase in transportation, processing and other revenue, primarily as a result of the MPP acquisition.

Purchases of Natural Gas and NGLs Purchases of natural gas and NGLs decreased in 2009 compared to 2008, primarily due to lower costs of natural gas supply, driven by lower commodity prices, partially offset by an amendment to a contract with an affiliate, which resulted in a prospective change in certain Pelico purchases from a net presentation to a gross presentation.

Table of Contents

Segment Gross Margin Segment gross margin decreased in 2009 compared to 2008, primarily as a result of the following:

\$90.2 million decrease due to lower commodity prices, which includes the results of East Texas for which the portion owned by DCP Midstream, LLC is unhedged; and

\$16.5 million decrease due to lower natural gas volumes and NGL production, partially resulting from the lower processing margin environment. These decreases include the impact of a fire at East Texas in the first quarter of 2009. 2008 results were significantly impacted by hurricanes and operational downtime, as well as curtailed volumes due to a pipeline integrity and system enhancement project at our Wyoming system.

These decreases were partially offset by:

\$45.6 million increase related to commodity derivative activity, as discussed in the Operating Revenues section above; and

\$15.4 million increase primarily as a result of increased fee-based throughput volumes due to the MPP acquisition.

Operating and Maintenance Expense Operating and maintenance expense decreased in 2009 compared to 2008, primarily as a result of our cost reduction initiatives, partially offset by increased expenses as a result of the MPP acquisition.

Depreciation and Amortization Expense Depreciation and amortization expense increased in 2009 compared to 2008, primarily as a result of the MPP acquisition, and our East Texas and Wyoming capital projects.

Earnings from Equity Method Investment Earnings from equity method investment, representing our 40% ownership of Discovery, decreased in 2009 compared to 2008. Settlements related to our commodity derivatives on our equity method investment are included in segment gross margin. Decreased equity earnings were primarily as a result of the following variances in earnings drivers, representing 100% of Discovery's results of operations: a decrease in Discovery's net income of \$31.0 million, or 61%, due primarily to \$37.0 million lower NGL sales margins resulting from lower average per-unit margins and lower volumes on NGL equity sales, combined with \$5.1 million unfavorable other income or expense net. These decreases were partially offset by \$6.6 million higher gathering and transportation revenue, \$5.4 million lower operating and maintenance expense and \$3.8 million lower depreciation and accretion expense.

Noncontrolling Interest in Income Noncontrolling interest in income in 2008 represents the noncontrolling interest holders' portion of the net income or loss of our East Texas and Collbran joint ventures. 2009 also includes the noncontrolling interest holders' portion of the net income of Jackson, acquired in the MPP acquisition. Noncontrolling interest in income decreased in 2009 compared to 2008 primarily as a result of decreased net income at East Texas.

Natural gas transported, processed and/or treated increased in 2009 compared to 2008, due primarily to increased volumes from the MPP acquisition, partially offset by decreased volumes across certain other assets. NGL production decreased in 2009 compared to 2008, due primarily to decreased NGL production at East Texas and Discovery. Decreased production at East Texas and Discovery includes the impact of a fire at East Texas during the first quarter of 2009 and the impact in 2009 of operational downtime at Discovery following the hurricanes.

Table of Contents**Results of Operations Wholesale Propane Logistics Segment**

This segment includes our propane transportation facilities, which includes five owned and operated rail terminals, one leased marine terminal, one pipeline terminal, and access to several open-access pipeline terminals:

	Three Months Ended September 30,		Nine Months Ended September 30,		Variance Three Months 2009 vs. 2008		Variance Nine Months 2009 vs. 2008

* Percentage change is not meaningful.

(a) Segment gross margin consists of total operating revenues, including commodity derivative activity, less purchases of propane. Please read *How We Evaluate Our Operations* above.

Three Months Ended September 30, 2009 vs. Three Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$40.6 million decrease attributable to lower propane prices, which impact both sales and purchases; partially offset by

\$7.1 million increase attributable to increased sales volumes and margins.

Purchases of Propane Purchases of propane decreased in 2009 compared to 2008, primarily due lower propane prices, which impact both sales and purchases, partially offset by increased volumes.

Segment Gross Margin Segment gross margin increased in 2009 compared to 2008, partially as a result of higher volumes and margins. 2008 results included \$3.0 million in unfavorable non-cash lower of cost or market inventory adjustments.

Operating and Maintenance Expense Operating and maintenance expense increased in 2009 compared to 2008 primarily due to property taxes, partially offset by our cost reduction initiatives.

Propane sales volumes increased by 9% in 2009 compared to 2008.

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Nine Months Ended September 30, 2009 vs. Nine Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to the following:

\$173.3 million decrease attributable to lower propane prices, which impact both sales and purchases;

Table of Contents

\$0.9 million decrease attributable to other fee revenue; partially offset by

\$23.4 million increase attributable to increased propane sales volumes and margins; and

\$1.0 million increase related to commodity derivative activity.

Purchases of Propane Purchases of propane decreased in 2009 compared to 2008, due to lower propane prices, which impact both sales and purchases, partially offset by increased volumes.

Segment Gross Margin Segment gross margin increased in 2009 compared to 2008, primarily as a result of increased volumes and margins, approximately \$6.0 million of which was attributable to the sale of inventory that was written down at the end of the fourth quarter of 2008, and gains related to commodity derivative activity.

Operating and Maintenance Expense Operating and maintenance expense increased in 2009 compared to 2008 due to property taxes, partially offset by our cost reduction initiatives.

Propane sales volumes increased 6% in 2009 compared to 2008.

Results of Operations NGL Logistics Segment

This segment includes our Seabreeze and Wilbreeze NGL transportation pipelines and our 45% interest in Black Lake:

	Three Months Ended September 30,		Nine Months Ended September 30,		Variance Three Months 2009 vs. 2008		Variance Nine Months 2009 vs. 2008

(a) Segment gross margin consists of total operating revenues less purchases of NGLs. Please read **How We Evaluate Our Operations** above.

(b) Includes our proportionate share of the throughput volumes and earnings of Black Lake and the amortization of the net difference between the carrying amount of Black Lake and the underlying equity of Black Lake, for each period presented.

Three Months Ended September 30, 2009 vs. Three Months Ended September 30, 2008

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to lower commodity prices, which impact both sales and purchases, partially offset by increased per unit margins.

Purchases of NGLs Purchases of NGLs decreased in 2009 compared to 2008, due primarily to lower commodity prices, which impact both sales and purchases.

Table of Contents

Segment Gross Margin Segment gross margin increased in 2009 compared to 2008, primarily due to higher per unit margins.

Earnings from Equity Method Investment Earnings from equity method investments increased in 2009 compared to 2008, primarily due to decreased operating expenses.

NGL pipeline throughput increased in 2009 compared to 2008. Volumes from new interconnects offset declines from certain connected plants.

Nine Months Ended September 30, 2009 vs. Nine Months Ended September 30, 2008

Total Operating Revenues Total operating revenues decreased in 2009 compared to 2008, primarily due to lower commodity prices, which impact both sales and purchases, and lower throughput volumes.

Purchases of NGLs Purchases of NGLs decreased in 2009 compared to 2008, due primarily to lower commodity prices, which impact both sales and purchases.

Segment Gross Margin Segment gross margin decreased in 2009 compared to 2008, primarily due to decreased throughput volumes.

Earnings from Equity Method Investment Earnings from equity method investments increased in 2009 compared to 2008, primarily due to decreased operating expenses.

NGL pipeline throughput decreased in 2009 compared to 2008, partially resulting from ethane rejection at certain connected processing plants during the first quarter of 2009. 2008 throughput volumes reflected a higher commodity price environment and increased processing activity.

Liquidity and Capital Resources

We expect our sources of liquidity to include:

cash generated from operations;

cash distributions from our equity method investments;

borrowings under our revolving credit facility;

cash realized from the liquidation of securities that are pledged under our term loan facility;

issuance of additional partnership units;

debt offerings;

guarantees issued by DCP Midstream, LLC, which reduce the amount of collateral we may be required to post with certain counterparties to our commodity derivative instruments; and

letters of credit.

We anticipate our more significant uses of resources to include:

capital expenditures;

quarterly distributions to our unitholders;

contributions to our equity method investments to finance our share of their capital expenditures;

business and asset acquisitions; and

collateral with counterparties to our swap contracts to secure potential exposure under these contracts, which may, at times, be significant depending on commodity price movements, and which is required to the extent we exceed certain guarantees issued by DCP Midstream, LLC and letters of credit we have posted.

Table of Contents

We believe that cash generated from these sources will be sufficient to meet our short-term working capital requirements, long-term capital expenditure and acquisition requirements, and quarterly cash distributions for the next twelve months. In the event these sources are not sufficient, we would reduce our discretionary spending.

During 2009, there has been a general improvement in the market for and the valuations of equity securities and a general improvement in the availability and cost of funds obtained in the public and private debt markets, as compared with the latter part of 2008. Based on current and anticipated levels of operations, we believe we have adequate committed financial resources to conduct our business, although deterioration in our operating environment could limit our borrowing capacity, raise our financing costs, as well as impact our compliance with our financial covenant requirements under our credit agreement. Our sources of funding could include the placement of public and private debt and the issuance of our common units. Current debt and equity market conditions indicate the costs of funds obtained in these markets would likely be greater than what we previously were able to obtain.

Changes in natural gas, NGL and condensate prices and the terms of our processing arrangements have a direct impact on our generation and use of cash from operations due to their impact on net income, along with the resulting changes in working capital. We have mitigated a portion of our anticipated commodity price risk associated with the equity volumes from our gathering and processing activities through 2014 with fixed price natural gas, crude oil and NGL swaps. For additional information regarding our derivative activities, please read Item 7A. Quantitative and Qualitative Disclosures about Market Risk in our 2008 Form 10-K and Item 3. Quantitative and Qualitative Disclosures about Market Risk in this Quarterly Report on Form 10-Q.

Our banking group is comprised of various financial institutions, of which certain institutions have recently merged. We do not expect the aggregate contractual financial commitment of these institutions to us to change during the remaining life of our existing credit agreement as a result of these mergers.

We have a 5-year credit agreement, or the Credit Agreement, consisting of a \$814.6 million revolving credit facility and a \$10.0 million term loan facility at September 30, 2009. These amounts are net of non-participation by Lehman Brothers Commercial Bank. Our borrowing capacity may be limited by the Credit Agreement's financial covenant requirements. Except in the case of a default, which would make the borrowings under the Credit Agreement fully callable, amounts borrowed under the Credit Agreement will not mature prior to the June 21, 2012 maturity date. As of November 2, 2009, we had approximately \$213.0 million of borrowing capacity under the Credit Agreement.

The counterparties to each of our commodity swap contracts are investment-grade rated financial institutions. Under these contracts, we may be required to provide collateral to the counterparties in the event that our potential payment exposure exceeds a predetermined collateral threshold. Collateral thresholds are set by us and each counterparty, as applicable, in the master contract that governs our financial transactions based on our and the counterparty's assessment of creditworthiness. The assessment of our position with respect to the collateral thresholds are determined on a counterparty by counterparty basis, and are impacted by the representative forward price curves and notional quantities under our swap contracts. Due to the interrelation between the representative crude oil and natural gas forward price curves, it is not practical to determine a single pricing point at which our swap contracts will meet the collateral thresholds as we may transact multiple commodities with the same counterparty. As of November 2, 2009 DCP Midstream, LLC had issued and outstanding parental guarantees totaling \$103.0 million in favor of certain counterparties to our commodity derivative instruments to mitigate a portion of our collateral requirements with these counterparties. We pay DCP Midstream LLC a fee of 0.50% per annum on \$60.0 million of these parental guarantees. The fee on the remaining parental guarantees of \$43.0 million, which were provided prior to our initial public offering, is covered under the omnibus agreement with DCP Midstream, LLC. As of November 2, 2009 we had a letter of credit of \$10.0 million, on which we pay a fee of 0.75% per annum. These parental guarantees and letter of credit reduce the amount of cash we may be required to post as collateral. This letter of credit was issued directly by a financial institution and does not reduce the available capacity under our credit facility. As of November 2, 2009, we had no cash collateral posted with counterparties. Depending on daily commodity prices, the amount of collateral posted can go up or down on a daily basis. Predetermined collateral thresholds for commodity derivative instruments guaranteed by DCP Midstream, LLC are generally dependent on DCP Midstream, LLC's credit rating and the thresholds would be reduced to \$0 in the event DCP Midstream, LLC's credit rating were to fall below investment grade.

Working Capital Working capital is the amount by which current assets exceed current liabilities. Current assets are reduced by our quarterly distributions, which are required under the terms of our partnership agreement based on Available Cash, as defined in the partnership agreement. In general, our working capital is impacted by changes in the prices of commodities that we buy and sell, along with other business factors that affect our net income and cash flows. Our working capital is also impacted by the timing of operating cash receipts and disbursements, borrowings of and payments on debt, capital expenditures, and increases or decreases in restricted investments and other long-term assets.

Table of Contents

As of September 30, 2009, we had \$12.9 million in cash and cash equivalents. Of this balance, as of September 30, 2009, \$10.0 million was held by subsidiaries we do not wholly own, which we consolidate in our financial results. Other than the cash held by these subsidiaries, this cash balance was available for general corporate purposes.

We had a working capital deficit of \$13.0 million and working capital of \$52.2 million as of September 30, 2009 and December 31, 2008, respectively. Excluding derivative working capital liabilities of \$23.6 million and \$2.3 million, working capital would be \$10.6 million and \$54.5 million as of September 30, 2009 and December 31, 2008, respectively. The change in working capital is primarily attributable to the factors described above. We expect that our future working capital requirements will be impacted by these same factors.

Cash Flow Operating, investing and financing activities were as follows:

	Nine Months Ended September 30,	
	2009	2008
	(Millions)	
Net cash provided by operating activities	\$ 95.1	\$ 121.0
Net cash used in investing activities	\$ (97.9)	\$ (175.9)
Net cash (used in) provided by financing activities	\$ (46.2)	\$ 60.3

Net Cash Provided by Operating Activities The change in net cash provided by operating activities is attributable to our net income adjusted for non-cash charges as presented in the condensed consolidated statements of cash flows and change in working capital as discussed above.

We received net cash for settlements of our commodity derivative instruments during the nine months ended September 30, 2009 totaling \$17.3 million, approximately \$3.9 million of which was associated with rebalancing our portfolio. We paid net cash for settlements of our commodity derivative instruments during the nine months ended September 30, 2008 totaling \$38.5 million.

We received cash distributions from equity method investments of \$10.5 million and \$30.8 million during the nine months ended September 30, 2009 and 2008, respectively. Earnings exceeded distributions by \$0.5 million for the nine months ended September 30, 2009. Distributions exceeded earnings by \$6.6 million for the nine months ended September 30, 2008.

Net Cash Used in Investing Activities Net cash used in investing activities during the nine months ended September 30, 2009 was comprised of: (1) capital expenditures of \$143.0 million (our portion of which was \$66.3 million and the noncontrolling interest holders' portion was \$76.7 million), which primarily consisted of expenditures for installation of compression and expansion of our East Texas system, expansion of our Collbran system, and the completion of pipeline integrity system upgrades to our Wyoming system; (2) investments in Discovery of \$5.8 million; and (3) a net payment of \$0.1 million related to our acquisition of MPP partially offset by (4) net proceeds from sale of available-for-sale securities of \$50.0 million; (5) a \$0.7 million net working capital adjustment in relation to our acquisition of an additional 25.1% interest in East Texas in April 2009; and (6) proceeds from sale of assets of \$0.3 million.

Net cash used in investing activities during the nine months ended September 30, 2008, was primarily used for: (1) capital expenditures of \$44.3 million, which generally consisted of expenditures for construction and expansion of our infrastructure in addition to well connections and other upgrades to our existing facilities; (2) a payment of \$10.9 million related to our acquisition of the MEG subsidiaries; (3) investments in Discovery of \$1.9 million; and (4) net purchases of available-for-sale securities of \$121.3 million; which were partially offset by (5) \$2.5 million of proceeds from the sale of assets.

We invested cash in equity method investments of \$5.8 million and \$1.9 million during the nine months ended September 30, 2009 and 2008, respectively, of which \$1.6 million and \$1.9 million, respectively, was to fund our share of capital expansion projects, and \$4.2 million in 2009 was to fund repairs to Discovery following damage caused by Hurricane Ike in 2008.

Net Cash (Used in) Provided by Financing Activities Net cash used in financing activities during the nine months ended September 30, 2009 was comprised of (1) repayments of debt of \$157.2 million; (2) distributions to our unitholders and general partner of \$62.8 million; and (3) distributions to noncontrolling interests of \$15.4 million; partially offset by (4) borrowings of \$113.7 million; (5) contributions from noncontrolling interests of \$71.8 million; (6) net changes in advances to predecessor from DCP Midstream, LLC of \$3.0 million; and (7) contributions from DCP Midstream, LLC of \$0.7 million.

Table of Contents

Net cash provided by financing activities during the nine months ended September 30, 2008 was comprised of (1) borrowings of \$432.0 million; (2) net proceeds from sales of common limited partner units of \$132.1 million; (3) contributions from noncontrolling interests of \$12.9 million; (4) contributions from DCP Midstream, LLC of \$1.9 million, partially offset by; (5) repayments of debt of \$407.0 million; (6) distributions to our unitholders and general partner of \$55.8 million; (7) distributions to noncontrolling interests of \$41.2 million; and (8) net changes in advances from DCP Midstream, LLC relating to our predecessor of \$14.6 million.

During the nine months ended September 30, 2009, total outstanding indebtedness under our \$824.6 million credit agreement, which includes borrowings under our revolving credit facility, our term loan facility and letters of credit issued under the credit agreement, was not less than \$613.3 million and did not exceed \$656.8 million. The weighted average indebtedness outstanding for the nine months ended September 30, 2009 was \$646.4 million.

During the nine months ended September 30, 2009 we borrowed (1) \$63.7 million under our revolving credit facility for general working capital purposes; and (2) \$50.0 million under our revolving credit facility to fund partial repayment of our term loan facility; and we repaid \$107.2 million under our revolving credit facility and \$50.0 million on our term loan facility.

During the nine months ended September 30, 2008, we borrowed (1) \$252.0 million under our revolving credit facility for general corporate purposes; (2) \$30.0 million under our revolving credit facility to fund a partial retirement of our term loan facility; and (3) \$150.0 million under our term loan facility; and we repaid \$377.0 million on our revolving credit facility and \$30.0 million on our term loan facility.

We expect to continue to use cash in financing activities for the payment of distributions to our unitholders and general partner. See Note 12 of the Notes to Condensed Consolidated Financial Statements in Item 1. Financial Statements.

Capital Requirements The midstream energy business can be capital intensive, requiring significant investment to maintain and upgrade existing operations. Our capital requirements have consisted primarily of, and we anticipate will continue to consist of the following:

maintenance capital expenditures, which are cash expenditures where we add on to or improve capital assets owned, or acquire or construct new capital assets if such expenditures are made to maintain, including over the long term, our operating capacity or revenues; and

expansion capital expenditures, which are cash expenditures for acquisitions or capital improvements (where we add on to or improve the capital assets owned, or acquire or construct new gathering lines, treating facilities, processing plants, fractionation facilities, pipelines, terminals, docks, truck racks, tankage and other storage, distribution or transportation facilities and related or similar midstream assets) in each case if such addition, improvement, acquisition or construction is made to increase our operating capacity or revenues.

We incur capital expenditures for our consolidated entities and our equity method investments. Of the total \$143.0 million of capital expenditures for the nine months ended September 30, 2009, \$66.3 million represents our portion and \$76.7 million represents the noncontrolling interest holders' portion. We paid a total of \$66.3 million and \$24.3 million for our portion of capital expenditures during the nine months ended September 30, 2009 and 2008, respectively. This amount was comprised of our portion of expansion capital expenditures of \$56.4 million and \$18.8 million, and our portion of maintenance capital expenditures of \$9.9 million and \$5.5 million, for the nine months ended September 30, 2009 and 2008, respectively. The amounts we paid for our portion, combined with amounts paid from noncontrolling interests (including DCP Midstream, LLC), amount to our consolidated capital expenditures of \$143.0 million and \$44.3 million during the nine months ended September 30, 2009 and 2008, respectively. These amounts do not reflect capital expenditures for our equity method investments.

We anticipate our portion of maintenance capital expenditures will be up to \$5.0 million and our portion of expansion capital expenditures will be up to \$12.0 million for the remainder of 2009. The board of directors may approve additional growth capital during the year, at their discretion.

Table of Contents

Our expansion project at Collbran was substantially completed and became commercially operational in late September 2009 when Collbran began delivering gas to Enterprise Gas Processing LLC's pipeline. Installation of additional compression at Collbran is ongoing and is expected to be operational in the fourth quarter. We have invested approximately \$5.6 million in 2008 and \$39.5 million during the nine months ended September 30, 2009 on this project. As of November 2, 2009, one of our partners in Collbran has not participated in their respective share of contributions to this project by \$2.3 million.

During the third quarter of 2008, we announced plans, along with DCP Midstream, LLC, to invest approximately \$56.0 million in East Texas, our share of which is \$14 million, to construct a gathering pipeline to support the East Texas system. In May 2009, service was initiated on the pipeline. As of September 30, 2009, our cumulative net investment in this project is approximately \$12.3 million.

We intend to make cash distributions to our unitholders and our general partner. Due to our cash distribution policy, we expect that we will distribute to our unitholders most of the cash generated by our operations. As a result, we expect that we will rely upon external financing sources, which could include other debt and common unit issuances, to fund our acquisition and expansion capital expenditures.

We expect to fund future capital expenditures with restricted investments, funds generated from our operations, borrowings under our credit facility and the issuance of additional partnership units. If these sources are not sufficient, we may reduce our capital spending.

Given our long-term strategy of profitable growth, our long-term objective is to obtain an investment grade credit rating, to increase our available sources to fund capital expenditures.

Cash Distributions to Unitholders Our partnership agreement requires that, within 45 days after the end of each quarter, we distribute all Available Cash, as defined in the partnership agreement. We made cash distributions to our unitholders and general partner of \$62.8 million during the nine months ended September 30, 2009, as compared to \$55.4 million for the same period in 2008. We intend to make quarterly distribution payments to our unitholders and general partner to the extent we have sufficient cash from operations after the establishment of reserves.

Description of the Credit Agreement We have a 5-year credit agreement, or the Credit Agreement, consisting of a \$814.6 million revolving credit facility and a \$10.0 million term loan facility at September 30, 2009. The Credit Agreement matures on June 21, 2012. As of September 30, 2009, the outstanding balance on the revolving credit facility was \$603.0 million and the outstanding balance on the term loan facility was \$10.0 million.

Our obligations under the revolving credit facility are unsecured, and the term loan facility is secured at all times by high-grade securities, which are classified as restricted investments in the accompanying condensed consolidated balance sheets, in an amount equal to or greater than the outstanding principal amount of the term loan. Any portion of the term loan balance may be repaid at any time, and we would then have access to a corresponding amount of the collateral securities. Upon any prepayment of term loan borrowings, the amount of our revolving credit facility will automatically increase to the extent that the repayment of our term loan facility is made in connection with an acquisition or construction of assets in the midstream energy business. The unused portion of the revolving credit facility may be used for letters of credit. At September 30, 2009 and December 31, 2008, we had outstanding letters of credit issued under the Credit Agreement of \$0.3 million.

As of September 30, 2009, the interest rate on our term loan facility was 0.35% and the weighted-average interest rate on our revolving credit facility was 0.71% per annum.

Table of Contents**Total Contractual Cash Obligations and Off-Balance Sheet Obligations**

A summary of our total contractual cash obligations as of September 30, 2009, is as follows:

	Total	Payments Due by Period			2015 and Thereafter
		Remainder of 2009	2010-2012 (Millions)	2013-2014	
Long-term debt (a)	\$ 683.5	\$ 6.6	\$ 676.9	\$	\$
Operating lease obligations (b)	46.8	4.0	31.5	10.5	0.8
Purchase obligations (c)	708.1	64.3	427.5	155.2	61.1
Other long-term liabilities (d)	9.1		0.9	0.1	8.1
Total	\$ 1,447.5	\$ 74.9	\$ 1,136.8	\$ 165.8	\$ 70.0

- (a) Includes interest payments on long-term debt that has been hedged. Interest payments on long-term debt that has not been hedged are not included as these payments are based on floating interest rates and we cannot determine with accuracy the periodic repayment dates or the amounts of the interest payments.
- (b) Our operating lease obligations are off-balance sheet obligations, and primarily consist of our leased marine propane terminal and railcar leases, both of which provide supply and storage infrastructure for our Wholesale Propane Logistics business. Operating lease obligations also include firm transportation arrangements and natural gas storage for our Pelico system. The firm transportation arrangements supply off-system natural gas to Pelico and the natural gas storage arrangement enables us to maximize the value between the current price of natural gas and the futures market price of natural gas.
- (c) Our purchase obligations are off balance sheet obligations and include \$1.9 million of purchase orders for capital expenditures and \$706.2 million of various non-cancelable commitments to purchase physical quantities of propane supply for our Wholesale Propane Logistics business. For contracts where the price paid is based on an index, the amount is based on the forward market prices at September 30, 2009. Purchase obligations exclude accounts payable, accrued interest payable and other current liabilities recognized in the condensed consolidated balance sheets. Purchase obligations also exclude current and long-term unrealized losses on derivative instruments included in the condensed consolidated balance sheet, which represent the current fair value of various derivative contracts and do not represent future cash purchase obligations. These contracts may be settled financially at the difference between the future market price and the contractual price and may result in cash payments or cash receipts in the future, but generally do not require delivery of physical quantities of the underlying commodity. In addition, many of our gas purchase contracts include short and long term commitments to purchase produced gas at market prices. These contracts, which have no minimum quantities, are excluded from the table.
- (d) Other long-term liabilities include \$8.3 million of asset retirement obligations and \$0.8 million of environmental reserves recognized in the September 30, 2009 condensed consolidated balance sheet.

Recent Accounting Pronouncements

Financial Accounting Standards Board, or FASB, Statement of Financial Accounting Standards, or SFAS, No. 167 Amendments to FASB Interpretation No. 46(R), or SFAS 167 In June 2009, the FASB issued SFAS 167, which requires entities to perform additional analysis of their variable interest entities and consolidation methods. This SFAS becomes effective for us on January 1, 2010 and we are in the process of assessing the impact of this guidance on our condensed consolidated results of operations, cash flows and financial position.

Table of Contents

On July 1, 2009, the FASB Accounting Standards Codification, or ASC, became the source for authoritative U.S. Generally Accepted Accounting Principles, or GAAP, as noted in the discussion of Accounting Standards Update, or ASU, 2009-01 below. During the current quarter, the FASB issued several ASUs and ASCs. The following outlines the ASUs and ASCs that are applicable to us and may have an impact on our condensed consolidated financial statements and related disclosures:

ASU 2009-13 Revenue Recognition (Topic 605) Multiple-Deliverable Revenue Arrangements, or ASU 2009-13 In October 2009, the FASB issued ASU 2009-13 which amended ASC Topic 605 Revenue Recognition. The ASU addresses the accounting for multiple-deliverable arrangements, to enable vendors to account for products or services separately rather than as a combined unit. ASU 2009-13 is effective for us on January 1, 2011 and we are in the process of assessing the impact of ASU 2009-13 on our condensed consolidated results of operations, cash flows and financial position as a result of adoption.

ASU 2009-05 Fair Value Measurements and Disclosures (Topic 820) Measuring Liabilities at Fair Value, or ASU 2009-05 In August 2009, the FASB issued ASU 2009-05 which amended ASC Topic 820-10 Fair Value Measurements and Disclosures. Overall, for the fair value measurement of liabilities. The amended provisions in this update are designed to reduce potential ambiguity in financial reporting when measuring the fair value of liabilities, helping to improve the consistency in the application of Topic 820 Fair Value Measurements and Disclosures. ASU 2009-05 is effective for us on October 1, 2009. We have assessed the impact of ASU 2009-05 and there will be no impact on our condensed consolidated results of operations, cash flows or financial position. We will make the required disclosures in our December 31, 2009 financial statements.

ASU 2009-01 Topic 105 Generally Accepted Accounting Principles, or ASU 2009-01 In June 2009, the FASB issued ASU 2009-01, which amended ASC Topic 105 Generally Accepted Accounting Principles, or ASC 105 which establishes the FASB ASC as the source of authoritative GAAP. The ASC supersedes all existing non-SEC accounting and reporting standards. We adopted the amended provisions of ASC 105 effective September 15, 2009, and have included all required disclosures in this filing. The amended provisions of ASC 105 impacts only disclosures so there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption.

ASC 260 Earnings per Share, or ASC 260 In March 2008, the FASB amended guidance relating to earnings per share. The amendment seeks to improve the comparability of earnings per unit, or EPU, calculations for master limited partnerships with incentive distribution rights. We adopted these amended provisions effective January 1, 2009. As a result of adopting the amended provisions, undistributed earnings or losses are reduced or increased, respectively, by the amount of available cash that was generated during the current period, and undistributed earnings are no longer allocated to our general partner with respect to its incentive distribution rights, as our partnership agreement specifically limits incentive distributions to available cash. These amended provisions are applied retrospectively for all periods. We have retrospectively restated our previously disclosed net income (loss) per limited partner unit, or LPU, and related disclosures, within this filing. As a result of adoption, net income per LPU increased from \$2.97 per unit to \$5.24 per unit and net loss increased from \$(0.75) per unit to \$(0.79) per unit for the three and nine months ended September 30, 2008, respectively.

ASC 320 Investments Debt and Equity Securities, or ASC 320 In April 2009, the FASB amended the other-than-temporary impairment guidance for debt securities to make the guidance more operational and to improve the presentation and disclosure of other-than-temporary impairments on debt and equity securities in the financial statements. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

ASC 323 Investments Equity Method and Joint Ventures, or ASC 323 In November 2008, the FASB amended guidance on equity method investments. This issue addresses a) how the initial carrying value of an equity method investment should be determined; b) how impairment assessment of an underlying indefinite-lived intangible asset of an equity method investment should be performed; c) how an equity method investee's issuance of shares should be accounted for; and d) how to account for a change in an investment from the equity method to the cost method. This amendment became effective for us on January 1, 2009, and although it has not impacted the manner in which we apply equity method accounting, this guidance will be considered on a prospective basis to transactions with equity method investees.

ASC 350 Intangibles Goodwill and Other, or ASC 350, ASC 275 Risks and Uncertainties, or ASC 275 In April 2008, the FASB amended guidance relating to intangible assets and risks and uncertainties, for factors that should be considered in developing renewal or extension assumptions used to determine the useful life of an intangible asset. We adopted these amended provisions on January 1, 2009. As a result of acquisitions, we have intangible assets for customer contracts and related relationships in our condensed consolidated balance sheets. Generally, costs to renew or extend such contracts are not significant, and are expensed to the condensed consolidated statements of operations as incurred. During the current quarter, there were no contracts that were recognized as intangible assets that were renewed or extended.

Table of Contents

ASC 805 Business Combinations, or ASC 805 In April 2009, the FASB amended guidance relating to business combinations, providing additional guidance on the valuation of assets and liabilities assumed in a business combination that arise from contingencies, which would otherwise be subject to the provisions of other applicable GAAP. This amendment emphasizes that assets and liabilities assumed in a business combination that have an estimated fair value should be recorded at the time of acquisition. Assets and liabilities where the fair value may not be determinable during the measurement period will continue to be recognized pursuant to other applicable GAAP. This amendment was effective for us for business combinations with closing dates subsequent to January 1, 2009. During the first three quarters of 2009 we did not have any transactions that were accounted for as business combinations. We will account for any business combinations with closing dates subsequent to the effective date in accordance with this new guidance.

In December 2007, the FASB amended guidance relating to business combinations, which requires the acquiring entity in a business combination subsequent to January 1, 2009 to recognize all (and only) the assets acquired and liabilities assumed in the transaction; establishes the acquisition-date fair value as the measurement objective for all assets acquired and liabilities assumed; and requires the acquirer to disclose to investors and other users all of the information they need to evaluate and understand the nature and financial effect of the business combination. We adopted these amended provisions effective January 1, 2009, and will account for all transactions with closing dates subsequent to adoption in accordance with the revised provisions of this standard.

ASC 810 Consolidation, or ASC 810 In December 2007, the FASB amended guidance relating to consolidation, which establishes accounting and reporting standards for ownership interests in subsidiaries held by parties other than the parent, the amount of consolidated net income attributable to the parent and to the noncontrolling interest, changes in a parent's ownership interest and the valuation of retained noncontrolling equity investments when a subsidiary is deconsolidated. These amended provisions also establish reporting requirements that provide sufficient disclosures that clearly identify and distinguish between the interests of the parent and the interests of the noncontrolling owners. We adopted these amended provisions effective January 1, 2009, which required retrospective restatement of our condensed consolidated financial statements for all periods presented in this filing. As a result of adoption, we have reclassified our noncontrolling interest on our condensed consolidated balance sheets, from a component of liabilities to a component of equity and have also reclassified net income attributable to noncontrolling interest on our condensed consolidated statements of operations, to below net income for all periods presented. Furthermore, we have displayed the portion of other comprehensive income that is attributable to the noncontrolling interest within our condensed consolidated statements of comprehensive income. We also added a rollforward of the noncontrolling interest within our condensed consolidated statements of changes in partners' equity and will present this financial statement on a quarterly basis.

ASC 815 Derivatives and Hedging, or ASC 815 In March 2008, the FASB amended guidance relating to derivatives and hedging to require disclosures of how and why an entity uses derivative instruments, how derivative instruments and related hedged items are accounted for and how derivative instruments and related hedged items affect an entity's financial position, financial performance and cash flows. We adopted these amended provisions effective January 1, 2009, and have included all required disclosures in this filing. The amended provisions impact only disclosures, so there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption.

ASC 820 Fair Value Measurements and Disclosures, or ASC 820 In April 2009, the FASB amended guidance relating to fair value measurements and disclosures, which provides additional guidance on the valuation of assets or liabilities that are held in markets that have seen a significant decline in activity. While this amendment does not change the overall objective of determining fair value, it emphasizes that in markets with significantly decreased activity and the appearance of non-orderly transactions, an entity may employ multiple valuation techniques, to which significant adjustments may be required, to determine the most appropriate fair value. During 2009, certain of the markets in which we transact have seen a decrease in overall volume; however, we believe that these markets continue to provide sufficient liquidity such that transactions are executed in an orderly manner at fair value. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

On January 1, 2008 we adopted the fair value measurement and disclosure requirements of ASC 820 for all financial assets and liabilities. Effective January 1, 2009, we adopted the fair value measurement and disclosure requirements for all nonfinancial assets and liabilities. There was no effect on our condensed consolidated results of operations, cash flows, or financial position, and we have included all required disclosures as a result of the adoption of these requirements relative to nonfinancial assets and liabilities. The provisions of these requirements will be applied at such time a fair value measurement of a nonfinancial asset or nonfinancial liability is required, which may result in a fair value that is different than would have been calculated prior to the adoption of the fair value measurement and disclosure requirements.

Table of Contents

ASC 825 Financial Instruments, or ASC 825 In April 2009, the FASB amended guidance relating to financial instruments, requiring disclosure of summarized financial information for financial instruments. We have instruments that are subject to the fair value disclosure requirements of ASC 825, and are subject to the amended provisions of this guidance. We adopted these amended provisions effective June 30, 2009 and there was no impact on our condensed consolidated results of operations, cash flows or financial position.

ASC 855 Subsequent Events, or ASC 855 In May 2009, the FASB amended guidance relating to subsequent events, which sets forth the recognition and disclosure requirements for events that occur after the balance sheet date, but before financial statements are issued or are available to be issued. We adopted these amended provisions effective June 30, 2009, and there was no effect on our condensed consolidated results of operations, cash flows or financial position as a result of adoption. All appropriate disclosure of subsequent events is made within the footnotes.

Item 3. Quantitative and Qualitative Disclosures about Market Risk

For an in-depth discussion of our market risks, see Item 7A. Quantitative and Qualitative Disclosures about Market Risk in our 2008 Form 10-K.

Credit Risk

Our principal customers in the Natural Gas Services segment are large, natural gas marketing servicers and industrial end-users. Our principal customers in the Wholesale Propane Logistics segment are primarily retail propane distributors. In the NGL Logistics Segment, our principal customers include an affiliate of DCP Midstream, LLC, producers and marketing companies. Substantially all of our natural gas, propane and NGL sales are made at market-based prices. This concentration of credit risk may affect our overall credit risk, as these customers may be similarly affected by changes in economic, regulatory or other factors. Where exposed to credit risk, we analyze the counterparties' financial condition prior to entering into an agreement, establish credit limits, and monitor the appropriateness of these limits on an ongoing basis. We operate under DCP Midstream, LLC's corporate credit policy. DCP Midstream, LLC's corporate credit policy, as well as the standard terms and conditions of our agreements, prescribe the use of financial responsibility and reasonable grounds for adequate assurances. These provisions allow our credit department to request that a counterparty remedy credit limit violations by posting cash or letters of credit for exposure in excess of an established credit line. The credit line represents an open credit limit, determined in accordance with DCP Midstream, LLC's credit policy. Our standard agreements also provide that the inability of a counterparty to post collateral is sufficient cause to terminate a contract and liquidate all positions. The adequate assurance provisions also allow us to suspend deliveries, cancel agreements or continue deliveries to the buyer after the buyer provides security for payment to us in a satisfactory form.

Interest Rate Risk

Interest rates on future credit facility draws and debt offerings could be higher than current levels, causing our financing costs to increase accordingly. Although this could limit our ability to raise funds in the debt capital markets, we expect to remain competitive with respect to acquisitions and capital projects, as our competitors would face similar circumstances.

We mitigate a portion of our interest rate risk with interest rate swaps, which reduce our exposure to market rate fluctuations by converting variable interest rates to fixed interest rates. These interest rate swap agreements convert the interest rate associated with an aggregate of \$575.0 million of the indebtedness outstanding under our revolving credit facility to a fixed rate obligation, thereby reducing the exposure to market rate fluctuations. The interest rate swap agreements have been designated as cash flow hedges, and effectiveness is determined by matching the principal balance and terms with that of the specified obligation. At September 30, 2009, the effective weighted-average interest rate on our \$603.0 million of outstanding revolver debt was 4.39%, taking into account the \$575.0 million of indebtedness with designated interest rate swaps.

Based on the annualized unhedged borrowings under our credit facility of \$38.0 million as of September 30, 2009, a 0.5% movement in the base rate or LIBOR rate would result in an approximately \$0.2 million annualized increase or decrease in interest expense.

Table of Contents**Commodity Price Risk**

We are exposed to the impact of market fluctuations in the prices of natural gas, NGLs and condensate as a result of our gathering, processing, sales and storage activities. For gathering services, we receive fees or commodities from producers to bring the natural gas from the wellhead to the processing plant. For processing services, we either receive fees or commodities as payment for these services, depending on the types of contracts. We employ established policies and procedures to manage our risks associated with these market fluctuations using various commodity derivatives, including forward contracts, swaps and futures.

Commodity Cash Flow Protection Activities We closely monitor the risks associated with commodity price changes on our future operations and, where appropriate, use various commodity instruments such as fixed price natural gas, crude oil and NGL contracts to mitigate the effect pricing fluctuations may have on the value of our assets and operations. Depending on our risk management objectives, we may periodically settle a portion of these instruments prior to their maturity.

We enter into derivative financial instruments to mitigate the risk of decreased natural gas, NGL and condensate prices associated with our percent-of-proceeds arrangements and gathering operations. Historically, there has been a relationship between NGL prices and crude oil prices and lack of liquidity in the NGL financial market; therefore we have historically used crude oil swaps to mitigate NGL price risk. As a result of these transactions, we have mitigated a portion of our expected natural gas, NGL and condensate commodity price risk through 2014.

The derivative financial instruments we have entered into are typically referred to as swap contracts. These swap contracts entitle us to receive payment at settlement from the counterparty to the contract to the extent that the reference price is below the swap price stated in the contract, and we are required to make payment at settlement to the counterparty to the extent that the reference price is higher than the swap price stated in the contract.

We are using the mark-to-market method of accounting for all commodity derivative instruments, which has significantly increased the volatility of our results of operations as we recognize, in current earnings, all non-cash gains and losses from the mark-to-market on derivative activity.

The following table sets forth our commodity derivative instruments as of November 2, 2009:

						Swap
Period		Commodity	Notional Volume	Reference Price	Price Range	
October 2009	December 2009	Natural Gas	2,000 MMBtu/d	Texas Gas Transmission Price (a)	\$9.20/MMBtu	
October 2009	December 2009	Natural Gas	1,500 MMBtu/d	NYMEX Final Settlement Price (b)	\$8.22/MMBtu	
October 2009	December 2010	Natural Gas	1,634 MMBtu/d	IFERC Monthly Index Price for Colorado Interstate Gas Pipeline (e)	\$3.94/MMBtu	
January 2010	December 2010	Natural Gas	1,900 MMBtu/d	Texas Gas Transmission Price (a)	\$6.41 - \$9.20/MMBtu	
January 2011	December 2012	Natural Gas	1000 MMBtu/d	IFERC Monthly Index Prices for Colorado Interstate Gas Pipeline (e)	\$5.89 - \$6.89 /MMBtu	
January 2011	December 2012	Natural Gas	1,100 MMBtu/d	Texas Gas Transmission Price (a)	\$6.41 - \$6.80/MMBtu	
January 2010	December 2013	Natural Gas	1,000 MMBtu/d	NYMEX Final Settlement Price (b)	\$8.22/MMBtu	
October 2009	December 2009	Natural Gas Basis	1,500 MMBtu/d	IFERC Monthly Index Price for Panhandle Eastern Pipe Line (c)	NYMEX less \$0.68/MMBtu	
January 2010	December 2013	Natural Gas Basis	1,000 MMBtu/d	IFERC Monthly Index Price for Panhandle Eastern Pipe Line (c)	NYMEX less \$0.68/MMBtu	
October 2009	December 2009	Crude Oil	2,450 Bbls/d	Asian-pricing of NYMEX crude oil futures (d)	\$63.05 - \$86.95/Bbl	
January 2010	December 2010	Crude Oil	2,415 Bbls/d	Asian-pricing of NYMEX crude oil futures (d)	\$63.05 - \$87.25/Bbl	
April 2010	December 2011	Crude Oil	250 Bbls/d	Asian-pricing of NYMBEX crude oil futures (d)	\$56.75 - \$59.30/Bbl	
January 2011	December 2011	Crude Oil	2,350 Bbls/d	Asian-pricing of NYMEX crude oil futures (d)	\$66.72 - \$83.80/Bbl	
January 2012	December 2012	Crude Oil	2,125 Bbls/d	Asian-pricing of NYMEX crude oil futures (d)	\$66.72 - \$90.00/Bbl	
January 2013	December 2013	Crude Oil	2,050 Bbls/d	Asian-pricing of NYMEX crude oil futures (d)	\$67.60 - \$83.00/Bbl	
January 2014	December 2014	Crude Oil	1,000 Bbls/d		\$74.90 - \$84.70/Bbl	

Edgar Filing: DCP Midstream Partners, LP - Form 10-Q

Asian-pricing of NYMEX crude oil
futures (d)

October 2009	March 2010	NGLs	839 Bbls/d	Mt. Belvieu Non-TET (f)	\$0.66 - \$1.63/Gal
--------------	------------	------	------------	-------------------------	---------------------

- (a) The Inside FERC index price for natural gas delivered into the Texas Gas Transmission pipeline in the North Louisiana area.

Table of Contents

- (b) NYMEX final settlement price for natural gas futures contracts (NG).
- (c) The Inside FERC monthly published index price for Panhandle Eastern Pipe Line (Texas, Oklahoma mainline) less the NYMEX final settlement price for natural gas futures contracts.
- (d) Monthly average of the daily close prices for the prompt month NYMEX light, sweet crude oil futures contract (CL).
- (e) The Inside FERC index price for natural gas delivered into the Colorado Interstate Gas (CIG) pipeline.
- (f) The average monthly OPIS price for Mt. Belvieu Non-TET.

We utilize crude oil and NGL derivatives to mitigate a portion of our commodity price exposure for propane and heavier NGLs. Due to current movements in the relationship of NGL prices to crude oil prices outside of recent historical ranges, we have provided an additional sensitivity factor to capture movements up or down in this relationship. We have combined the NGL and crude oil sensitivities into one factor, and added our sensitivity to changes in the relationship between the pricing of NGLs and crude oil. For fixed price natural gas and crude oil, the sensitivities are associated with our unhedged volumes. For our NGL to crude oil price relationship, the sensitivity is associated with both hedged and unhedged equity volumes. Given our current contract mix and the commodity derivative contracts we have in place, we have updated our annualized sensitivities for 2009 as shown in the table below, which excludes the impact from mark-to-market on our commodity derivatives.

Commodity Sensitivities Excluding Non-Cash Mark-To-Market

	Per Unit Decrease	Unit of Measurement	Estimated Decrease in Annual Net Income Attributable to Partners (Millions)
Natural gas prices	\$ 1.00	MMBtu	\$ 0.1
Crude oil prices (a)	\$ 5.00	Barrel	\$ 1.4
NGL to crude oil price relationship (b)	5 percentage point change	Barrel	\$ 4.3

- (a) Assuming 60% NGL to crude oil price relationship.
- (b) Assuming 60% NGL to crude oil price relationship and \$60.00/Bbl crude oil price. Generally, this sensitivity changes by \$1.5 million for each \$20.00/Bbl change in the price of crude oil. As crude oil prices increase from \$60.00/Bbl, we become slightly more sensitive to the change in the relationship of NGL prices to crude oil prices. As crude oil prices decrease from \$60.00/Bbl, we become less sensitive to the change in the relationship of NGL prices to crude oil prices.

In addition to the linear relationships in our commodity sensitivities above, additional factors cause us to be less sensitive to commodity price declines. A portion of our net income is derived from fee-based contracts and a certain percentage of liquids processing arrangements that contain minimum fee clauses in which our processing margins convert to fee-based arrangements as NGL prices decline.

The above sensitivities exclude the impact from arrangements where producers on a monthly basis may elect to not process their natural gas in which case we retain a portion of the customers' natural gas in lieu of NGLs as a fee. The above sensitivities also exclude certain related processing arrangements where we control the processing or by-pass of the production based upon individual economic processing conditions. Under each of these types of arrangements, our processing of the natural gas would yield favorable processing margins. Less than 10% of our gas throughput is associated with these arrangements.

Table of Contents

We estimate the following non-cash sensitivities in 2009 related to the mark-to-market on our commodity derivatives associated with our commodity cash flow protection activities:

Non-Cash Mark-To-Market Commodity Sensitivities

	Per Unit Increase	Unit of Measurement	Estimated Mark-to-Market Impact (Decrease in Net Income Attributable to Partners) (Millions)
Natural gas prices	\$ 1.00	MMBtu	\$ 4.5
Crude oil prices	\$ 5.00	Barrel	\$ 19.3
NGL prices	\$ 0.10	Gallon	\$ 0.5

While the above commodity price sensitivities are indicative of the impact that changes in commodity prices may have on our annualized net income, changes during certain periods of extreme price volatility and market conditions or changes in the relationship of the price of NGLs and crude oil may cause our commodity price sensitivities to vary significantly from these estimates.

The midstream natural gas industry is cyclical, with the operating results of companies in the industry significantly affected by the prevailing price of NGLs, which in turn has been generally related to the price of crude oil, except in recent periods, when NGL pricing has been at a greater discount to crude oil pricing. Although the prevailing price of residue natural gas has less short-term significance to our operating results than the price of NGLs, in the long term, the growth and sustainability of our business depends on natural gas prices being at levels sufficient to provide incentives and capital, for producers to increase natural gas exploration and production. To minimize potential future commodity-based pricing and cash flow volatility, we have entered into a series of derivative financial instruments. As a result of these transactions, we have mitigated a portion of our expected natural gas, NGL and condensate commodity price risk relating to the equity volumes associated with our gathering and processing activities through 2014. Given the historical relationship between NGL prices and crude oil prices and lack of liquidity in the NGL financial market, we have generally used crude oil swaps to mitigate NGL price risk. As a result of the current movements in the relationship of NGL prices to crude oil prices outside of recent historical ranges, we have additional exposure to changes in the relationship.

Based on historical trends, however, we generally expect NGL prices to follow changes in crude oil prices over the long term, which we believe will in large part be determined by the level of production from major crude oil exporting countries and the demand generated by growth in the world economy. We believe that future natural gas prices will be influenced by supply deliverability, the severity of winter and summer weather, and the domestic production and drilling activity level of exploration and production companies. Drilling activity can be adversely affected as natural gas prices decrease. Energy market uncertainty could also reduce North American drilling activity in the future. Limited access to capital could also decrease drilling. Lower drilling levels over a sustained period would have a negative effect on natural gas volumes gathered and processed, but would likely increase commodity prices.

Item 4. Controls and Procedures
Evaluation of Disclosure Controls and Procedures

Our management, including the Chief Executive Officer and the Chief Financial Officer, of DCP Midstream GP, LLC, has evaluated the effectiveness of our disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and concluded that, as of the end of the period covered by this report, the disclosure controls and procedures are effective in ensuring that all material information required to be filed in this quarterly report has been made known to them in a timely fashion and the required information was effectively recorded, processed, summarized and reported within the time period necessary to prepare this quarterly report. Our disclosure controls and procedures are effective in ensuring that information required to be disclosed in our reports under the Exchange Act are accumulated and communicated to management, including the Chief Executive Officer and the Chief Financial Officer, of DCP Midstream GP, LLC, as appropriate to allow timely decisions regarding required disclosure.

Table of Contents

Changes in Internal Control Over Financial Reporting

There were no changes in our internal control over financial reporting that occurred during the quarter ended September 30, 2009 that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Table of Contents

PART II. OTHER INFORMATION

Item 1. Legal Proceedings

Except for the two matters noted below, the information required for this item is provided in Note 17, Commitments and Contingent Liabilities, included in Item 8 of our 2008 Form 10-K, which information is incorporated by reference into this item.

Anderson Gulch In February 2009, the Colorado Department of Public Health and Environment, or CDPHE, issued a Notice of Violation that alleges violations of the air permit at our Anderson Gulch gas plant in 2008. The Anderson Gulch gas plant is owned by Collbran Valley Gas Gathering, LLC, or Collbran, our 70% owned joint venture in western Colorado. Collbran resolved this matter with the CDPHE and paid \$186,000 in October, 2009.

El Paso On February 27, 2009, a jury in the District Court, Harris County, Texas rendered a verdict in favor of El Paso E&P Company, L.P., or El Paso, and against one of our subsidiaries and DCP Midstream, LLC. As previously disclosed, the lawsuit, filed in December 2006, stems from an ongoing commercial dispute involving our Minden processing plant that dates back to August 2000, which includes periods of time prior to our ownership of this asset. Our responsibility for this judgment will be limited to the time period after we acquired the asset from DCP Midstream, LLC in December 2005. During the second quarter of 2009 we filed an appeal in the 14th Court of Appeals, Texas and will continue to defend ourselves vigorously against this claim. El Paso filed an additional lawsuit in the District Court of Webster Parish, Louisiana, claiming damages for the same claims as the Texas matter, but for periods prior to our ownership of the Minden processing plant. The Louisiana court determined in August 2009 that El Paso's Louisiana claims were barred by the doctrine of res judicata and dismissed the case with prejudice in Louisiana. El Paso has appealed this decision. As a result of the jury verdict in the Texas litigation, we recorded a contingent liability of \$2.5 million in the fourth quarter of 2008 for this matter, which is included in other long-term liabilities in the condensed consolidated balance sheets as of September 30, 2009 and in other current liabilities in the condensed consolidated balance sheets as of December 31, 2008.

Item 1A. Risk Factors

In addition to the other information set forth in this report, careful consideration should be given to the risk factors discussed in Part I, Item 1A. Risk Factors in our 2008 Form 10-K. An investment in our securities involves various risks. When considering an investment in us, you should consider carefully all of the risk factors described in our 2008 Form 10-K. Additional risks and uncertainties not currently known to us or that we currently deem to be immaterial may also materially adversely affect our condensed consolidated results of operations, financial condition and cash flows.

The following are new or modified risk factors that should be read in conjunction with the risk factors disclosed in our 2008 Form 10-K:

Because of the natural decline in production from existing wells, our success depends on our ability to obtain new sources of supplies of natural gas and NGLs.

Our gathering and transportation pipeline systems are connected to or dependent on the level of production from natural gas wells, from which production will naturally decline over time. As a result, our cash flows associated with these wells will also decline over time. In order to maintain or increase throughput levels on our gathering and transportation pipeline systems and NGL pipelines and the asset utilization rates at our natural gas processing plants, we must continually obtain new supplies. The primary factors affecting our ability to obtain new supplies of natural gas and NGLs, and to attract new customers to our assets, include the level of successful drilling activity near these assets, the demand for natural gas and crude oil, producers' desire and ability to obtain necessary permits in an efficient manner, natural gas field characteristics and production performance, surface access and infrastructure issues, and our ability to compete for volumes from successful new wells. If we are not able to obtain new supplies of natural gas to replace the natural decline in volumes from existing wells or because of competition, throughput on our pipelines and the utilization rates of our treating and processing facilities would decline, which could have a material adverse effect on our business, results of operations, financial position and cash flows.

Table of Contents

Recent commodity price erosion, the credit market crisis and the current economic conditions may adversely affect natural gas and NGL producers' drilling activity and transportation spending levels, which may in turn negatively impact our volumes and results of operations and our ability to make distributions to our unitholders.

The level of drilling activity is dependent on economic and business factors beyond our control. Among the factors that impact drilling decisions are natural gas prices, the cost of finding and producing natural gas and the general condition of the credit and financial markets. Natural gas prices are lower in recent periods when compared to historical periods. For example, the rolling twelve-month average New York Mercantile Exchange, or NYMEX, daily settlement price of natural gas futures contracts per MMBtu was \$5.93 as of September 30, 2009, \$5.10 as of June 30, 2009, \$4.83 as of March 31, 2009 and was \$6.21, \$7.96 and \$7.23 as of December 31, 2008, 2007 and 2006, respectively. During periods of natural gas price decline, in particular in periods when capital markets are experiencing severe strain as in the current economy, the level of drilling activity could decrease. Suppliers that finance their drilling activities through cash flow from operations, the incurrence of debt or the issuance of equity may not be able or willing to do so under current market conditions, which continue to demonstrate a decline from prior periods in credit availability and a reduction in equity values. When combined with a reduction of cash flow resulting from recent declines in natural gas prices, a reduction in our producers' borrowing base under reserve-based credit facilities and lack of availability of debt or equity financing for our producers may result in a significant reduction in our producers' spending for natural gas drilling activity, which could result in lower volumes being transported on our pipeline systems.

Furthermore, a sustained decline in natural gas prices could result in a decrease in exploration and development activities in the fields served by our gathering and pipeline transportation systems and our natural gas treating and processing plants, which could lead to reduced utilization of these assets. For example, exploration and production companies have announced that the depressed natural gas prices may lead to reduced capital expenditures in 2009, which could lead them to shut-in wells and reduce production. Other factors that impact production decisions include the ability of producers to obtain necessary drilling and other governmental permits and regulatory changes. Because of these factors, even if new natural gas reserves are discovered in areas served by our assets, producers may choose not to develop those reserves. If we are not able to obtain new supplies of natural gas to replace the declines due to reductions in drilling activity, throughput on our pipelines and the utilization rates of our treating and processing facilities would decline, which could have a material adverse effect on our business, results of operations, financial position and cash flows, and ability to make cash distributions.

Restrictions in our credit facility may limit our ability to make distributions to unitholders and may limit our ability to capitalize on acquisitions and other business opportunities.

Our credit facility contains covenants limiting our ability to make distributions, incur indebtedness, grant liens, make acquisitions, investments or dispositions and engage in transactions with affiliates. Furthermore, our credit facility contains covenants requiring us to maintain certain leverage and other financial ratios and tests. Any subsequent replacement of our credit facility or any new indebtedness could have similar or greater restrictions. If our covenants are not met, whether as a result of reduced production levels of natural gas and NGLs as described above or otherwise, our financial condition, results of operations and ability to make distributions to our unitholders could be materially adversely affected.

Our assets and operations can be affected by weather and other weather related conditions.

Our assets and operations can be adversely affected by hurricanes, floods, tornadoes, wind, lightening and other natural phenomena, which could impact our results of operations and make it more difficult for us to realize historic rates of return. Although we carry insurance on the vast majority of our assets, insurance may be inadequate to cover our loss and in some instances, we may be unable to obtain insurance on commercially reasonable terms, if at all. If we incur a significant disruption in our operations or a significant liability for which we were not fully insured, our financial condition, results of operations and ability to make distributions to our unitholders could be materially adversely affected.

We may incur significant costs in the future associated with proposed climate change legislation.

The United States Congress and some states where we have operations are currently considering legislation related to greenhouse gas emissions. In addition, there have recently been international conventions and efforts to establish standards for the reduction of greenhouse gases globally. The United States Congress is currently considering a number of bills that would compel carbon dioxide emission reductions. Some of these proposals include limitations, or caps, on the amount of greenhouse gas that can be emitted, as well as a system of emissions allowances. The current proposal in the United States Congress places the entire burden of obtaining allowances for the carbon content of natural gas liquids, or NGLs, on the midstream natural gas industry. To the extent legislation is enacted that regulates greenhouse gas emissions, it could significantly increase our costs to (i) acquire

Table of Contents

allowances; (ii) operate and maintain our facilities; (iii) install new emission controls; and (iv) manage a greenhouse gas emissions program. If such legislation becomes law in the United States or any states we have operations and we are unable to pass these costs through as part of our services, it could have an adverse affect on our business and cash available for distributions.

Item 6. Exhibits

Exhibit		
Number		Description
3.1	*	First Amended and Restated Agreement of Limited Partnership of DCP Midstream GP, LP (attached as Exhibit 3.4 to DCP Midstream Partners, LP's Amendment No. 2 to Registration Statement on Form S-1 (File No. 333-128378) filed with the SEC on November 18, 2005).
3.2	*	First Amended and Restated Limited Liability Company Agreement of DCP Midstream GP, LLC (attached as Exhibit 3.6 to DCP Midstream Partners, LP's Amendment No. 2 to Registration Statement on Form S-1 (File No. 333-128378) filed with the SEC on November 18, 2005).
3.3	*	Second Amended and Restated Agreement of Limited Partnership of DCP Midstream Partners, LP (attached as Exhibit 3.1 to DCP Midstream Partners, LP's Form 8-K (File No. 001-32678) filed with the SEC on November 7, 2006).
3.4	*	Amendment No. 1 to Amended and Restated Limited Liability Company Agreement of DCP Midstream GP, LLC dated as of January 20, 2009 and Amended and Restated Limited Liability Company Agreement of DCP Midstream GP, LLC dated December 7, 2005 (attached as Exhibit 3.1 to DCP Midstream Partners, LP's Form 10-K (File No. 001-32678) filed with the SEC on March 5, 2009).
3.5	*	Amendment No. 1 to Second Amended and Restated Agreement of Limited Partnership of DCP Midstream Partners, LP, dated as of April 11, 2008 (attached as Exhibit 4.1 to DCP Midstream Partners, LP's Form 8-K (File No. 001-32678) filed with the SEC on April 14, 2008).
3.6	*	Amendment No. 2 to the Second Amended and Restated Agreement of Limited Partnership of DCP Midstream Partners, LP (attached as Exhibit 3.1 to DCP Midstream Partners, LP's Form 8-K (File No. 001-32678) filed with the SEC on April 7, 2009).
31.1		Certification of Chief Executive Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
31.2		Certification of Chief Financial Officer pursuant to Section 302 of the Sarbanes-Oxley Act of 2002.
32.1		Certification of Chief Executive Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.
32.2		Certification of Chief Financial Officer pursuant to 18 U.S.C. Section 1350, as adopted pursuant to Section 906 of the Sarbanes-Oxley Act of 2002.

* Such exhibit has heretofore been filed with the SEC as part of the filing indicated and is incorporated herein by reference.
