PICO HOLDINGS, INC. AND SUBSIDIARIES
NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS
(Unaudited)

1. Basis of Presentation

The accompanying unaudited condensed consolidated financial statements of PICO Holdings, Inc. and subsidiaries (collectively, the “Company” or “PICO”) have been prepared in accordance with the interim reporting requirements of Form 10-Q, pursuant to the rules and regulations of the United States Securities and Exchange Commission (the “SEC”). Accordingly, they do not include all of the information and notes required by accounting principles generally accepted in the United States of America (“U.S. GAAP”) for complete consolidated financial statements.

In the opinion of management, all adjustments and reclassifications considered necessary for a fair and comparable presentation of the financial statements presented have been included and are of a normal recurring nature. Operating results presented are not necessarily indicative of the results that may be expected for the year ending December 31, 2014.

These condensed consolidated financial statements should be read in conjunction with the Company’s audited consolidated financial statements and notes thereto contained in the Company’s Annual Report on Form 10-K for the year ended December 31, 2013 filed with the SEC.

The preparation of condensed consolidated financial statements in accordance with U.S. GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent liabilities at the date of the condensed consolidated financial statements and the reported amounts of revenues and expenses for each reporting period. The significant estimates made in the preparation of the Company’s condensed consolidated financial statements relate to the assessment of other-than-temporary impairments, the application of the equity method of accounting, goodwill and intangibles, real estate and water assets, deferred income taxes, stock-based compensation, fair value of derivatives, and contingent liabilities. While management believes that the carrying value of such assets and liabilities are appropriate as of March 31, 2014, and December 31, 2013, it is reasonably possible that actual results could differ from the estimates upon which the carrying values were based.

Real Estate and Tangible Water Assets:

Real estate and tangible water assets include the cost of certain tangible water assets, water storage credits and related storage facilities, real estate, including raw land and real estate being developed, and any real estate improvements. The Company capitalizes pre-acquisition costs, the purchase price of real estate, development costs and other allocated costs, including interest, during development and home construction. Pre-acquisition costs, including non-refundable land deposits, are expensed to cost of sales when the Company determines continuation of the related project is not probable.

Additional costs to develop or otherwise prepare real estate and water assets for their intended use are capitalized. These costs typically include direct home construction costs, legal fees, engineering, consulting, direct cost of well drilling or related construction and any interest cost capitalized on qualifying assets during the development period. The Company expenses all maintenance and repair costs on real estate and water assets. The types of costs capitalized are consistent across periods presented. Tangible water assets consist of various water interests currently in development or awaiting permitting. Water storage typically includes the cost of the real estate and direct construction costs to build the site. Amortization of real estate improvements is computed using the straight-line method over the estimated useful lives of the improvements ranging from five to 15 years.

All real estate and tangible water assets are classified as held and used until management commits to a plan to sell the asset, the asset can be sold in its present condition, the asset is being actively marketed for sale, and it is probable that the asset will be sold within the next 12 months. At March 31, 2014, and December 31, 2013, the Company had real estate of \$23.1 million and \$8.6 million, respectively, classified as held for sale.

The costs assigned to the various components of real estate and tangible water assets were as follows (in thousands):

	March 31, 2014	December 31, 2013
Real estate	\$243,819	\$208,506
Tangible water assets	45,710	45,702
	\$289,529	\$254,208

Intangible Water Assets:

Intangible water assets includes the costs of indefinite-lived intangible assets and is comprised of water rights and the exclusive right to use two water transportation pipelines. The Company capitalizes development and entitlement costs and other allocated costs, including interest, during the development period of the assets and transfers the costs to intangible water assets when water rights are permitted. Water rights consist of various water interests acquired or developed independently or in conjunction with the acquisition of real estate. When the Company purchases intangible water assets that are attached to real estate, an allocation of the total purchase price, including any direct costs of the acquisition, is made at the date of acquisition based on the estimated relative fair values of the water rights and the real estate. Intangible assets with indefinite useful lives are not amortized but are tested for impairment at least annually in the fourth quarter, or more frequently if events or changes in circumstances indicate that the asset may be impaired, by comparing the fair value of the assets to their carrying amounts.

The fair value of the intangible assets is calculated using discounted cash flow models that incorporate a wide range of assumptions including current asset pricing, price escalation, discount rates, absorption rates, timing of sales, and costs. These models are sensitive to minor changes in any of the input variables.

Inventory:

The Company classifies its canola seed as raw material inventory and canola oil and meal as finished goods inventory, which are included in other assets in the consolidated balance sheets. At March 31, 2014 the Company had \$5.3 million of raw materials and \$7.1 million of finished goods.

Noncontrolling Interests:

The Company reports the share of the results of operations that are attributable to other owners of its consolidated subsidiaries that are less than wholly-owned as noncontrolling interest in the accompanying condensed consolidated financial statements. In the condensed consolidated statement of operations and comprehensive income or loss, the income or loss attributable to the noncontrolling interest is reported separately and the accumulated income or loss attributable to the noncontrolling interest, along with any changes in ownership of the subsidiary, is reported within shareholders' equity.

At March 31, 2014, noncontrolling interest reported in the condensed consolidated financial statements includes the owners of 42.52% of UCP, Inc ("UCP"). The noncontrolling interest related to UCP increased from 42.25% during the quarter ended March 31, 2014, due to the issuance of UCP Class A common stock related to vesting of restricted stock units ("RSU") awarded in 2013. The Company's consolidated noncontrolling interest also includes the results of operations allocated to the owners of the 12% interest in PICO Northstar, LLC ("Northstar").

Stock-Based Compensation:

Stock-based compensation expense is measured at the grant date based on the fair values of the awards and is recognized as expense over the period in which the share-based compensation vests (generally one to four years) using the straight-line method.

At March 31, 2014, PICO had one stock-based payment arrangement outstanding. UCP also issues stock-based compensation under its own long term incentive plan that provides for equity-based awards, which upon vesting results in newly issued shares of UCP Class A common stock.

The PICO Holdings, Inc. 2005 Long Term Incentive Plan (the “Plan”) provides for the grant or award of various equity incentives to PICO employees, non-employee directors, and consultants. A total of 2,654,000 shares of common stock are issuable under the Plan and it provides for the issuance of incentive stock options, non-statutory stock options, free-standing stock-settled stock appreciation rights (“SAR”), restricted stock awards (“RSA”), performance shares, performance units, RSU, deferred compensation awards, and other stock-based awards. The Plan allows for broker assisted cashless exercises and net-settlement of income taxes and employee withholding taxes. Upon exercise of a SAR and RSU, the employee will receive newly issued shares of PICO Holdings common stock with a fair value equal to the in-the-money value of the award, less applicable federal, state and local withholding and income taxes (however, the holder of an RSU can elect to pay withholding taxes in cash).

The Company recorded stock based compensation expense of \$2 million and \$946,000 during the three months ended March 31, 2014, and 2013, respectively. Of the \$2 million in stock based compensation recorded in the first quarter of 2014, \$1 million related to RSU for UCP common stock granted to the officers of UCP, of which \$587,000 was allocated to noncontrolling interest. There was no stock based compensation expense related to UCP in the three months ended March 31, 2013.

Restricted Stock Units (RSU):

A summary of activity of the RSU is as follows:

	RSU	Weighted-Average Grant Date Fair Value Per Share
Outstanding at January 1, 2014	469,435	\$30.43
Granted		
Vested		
Outstanding at March 31, 2014	469,435	\$30.43
Unrecognized compensation cost (in thousands)	\$2,090	

Stock-Settled Stock Appreciation Rights (SAR):

Upon exercise, a SAR entitles the recipient to receive a newly issued share of the Company's common stock equal to the in-the-money value of the award, less applicable federal, state and local withholding and income taxes. SAR do not vote and are not entitled to receive dividends. Compensation expense for SAR was recognized ratably over the vesting period for each grant.

There were no unvested SAR, and therefore no compensation expense was recognized during the three months ended March 31, 2014, and 2013. In addition, there were no SAR granted or exercised during the three months ended March 31, 2014, or 2013.

A summary of SAR activity is as follows:

	SAR	Weighted Average Exercise Price	Weighted Average Contractual Term in Years
Outstanding at January 1, 2014	1,616,625	\$36.45	2.5 years
Outstanding and exercisable at March 31, 2014	1,616,625	\$36.45	2.2 years

At March 31, 2014, none of the outstanding SAR were in-the-money.

Accumulated Other Comprehensive Income:

The components of accumulated other comprehensive income are as follows (in thousands):

	March 31, 2014	December 31, 2013
Net unrealized appreciation on available-for-sale investments	\$7,353	\$6,866
Foreign currency translation	(6,594)	(6,634)
Accumulated other comprehensive income	\$759	\$232

The unrealized appreciation on available-for-sale investments is net of a deferred income tax liability of \$3.9 million at March 31, 2014, and \$3.7 million at December 31, 2013. The foreign currency translation is net of a deferred income tax asset of \$3.4 million at March 31, 2014, and \$3.4 million at December 31, 2013.

The following table reports amounts that were reclassified from accumulated other comprehensive income or loss and included in earnings (in thousands):

	Three Months Ended March 31,	
	2014	2013
Beginning balance - January 1	\$232	\$(2,014)
Unrealized gain on marketable securities, net of tax	474	660
Amount reclassified and recognized in net loss, net of tax ⁽¹⁾	13	92
Accumulated foreign currency translation, net of tax	40	236
Net change in other comprehensive income, net of tax	527	988
Accumulated other comprehensive income (loss)	\$759	\$(1,026)

⁽¹⁾Amounts reclassified from unrealized gain on marketable securities are included in other income in the condensed consolidated statement of operations and comprehensive income or loss.

Deferred Compensation:

At March 31, 2014, and December 31, 2013, the Company had \$24.6 million and \$24.2 million, respectively, recorded as deferred compensation payable to various members of management and certain non-employee members of the board of directors of the Company.

The deferred compensation liability increased by \$399,000 during the three months ended March 31, 2014, primarily due to an increase in the fair value of the deferred compensation plan assets of \$599,000, offset by payments to plan participants. Included in operating and other costs in the accompanying condensed consolidated statements of operations and comprehensive income or loss for the three months ended March 31, 2014, and 2013, is compensation expense of \$599,000 and \$618,000, respectively.

Revenue Recognition:

Sale of Real Estate and Water Assets

Revenue recognition on the sale of real estate and water assets conforms with accounting literature related to the sale of real estate, and is recognized in full when there is a legally binding sale contract, the profit is determinable (the collectability of the sales price is reasonably assured, or any amount that will not be collectible can be estimated), the earnings process is virtually complete (the Company is not obligated to perform significant activities after the sale to earn the profit, meaning the Company has transferred all risks and rewards to the buyer), and the buyer's initial and continuing investment is adequate to demonstrate a commitment to pay for the property. If these conditions are not met, the Company records the cash received as deferred revenue until the conditions to recognize full profit are met.

Sale of Finished Homes

Revenue from sales of finished homes is included in the sale of real estate and water assets in the accompanying condensed consolidated statement of operations and comprehensive income or loss and is recognized when the sale closes and title passes to the new homeowner, the new homeowners initial and continuing investment is adequate to demonstrate a commitment to pay for the home, the new homeowners receivable is not subject to future subordination and the Company does not have a substantial continuing involvement with the new home.

Sale of Canola Oil and Meal

Sales of canola oil and meal are recognized when persuasive evidence of an arrangement exists, products are shipped, the price is fixed or determinable, the customer takes ownership and assumes risk of loss, and when collection is reasonably assured. Sales terms provide for passage of title at the time and point of shipping. Northstar has an agreement with Purina Animal Nutrition, LLC (“Purina”), which commits Purina to guarantee the sale of 100% of the canola oil and canola meal output from the Company’s canola seed crushing plant at market based prices for five years ending December 31, 2017, at which time the contract automatically renews for successive one year periods unless canceled by either party.

Cost of Canola Oil and Meal Sold:

Subsequent to the issuance of the Company's condensed consolidated financial statements for the three months ended March 31, 2013, the Company discovered that \$4.1 million of labor and certain overhead costs related to the purchasing and production of the inventory, including depreciation of plant and equipment and energy costs, which should have been presented within cost of canola oil and meal sold, were inappropriately presented as \$2.1 million within operating and other costs, and \$2 million as depreciation and amortization for the three months ended March 31, 2013. For the three months ended March 31, 2014, the expenses have been properly presented as costs of canola oil and meal sold in the condensed consolidated statements of operation and comprehensive income or loss for the current period, and the three months ended March 31, 2013 presentation has been corrected. These errors did not affect consolidated shareholders' equity, net income or loss on the condensed consolidated statements of operations and comprehensive income or loss, or consolidated cash flows and are not considered to be material to the Company's previously issued condensed consolidated financial statements.

Accounting for Income Taxes:

The Company's provision for income tax expense includes federal, foreign and state income taxes currently payable and those deferred because of temporary differences between the income tax and financial reporting bases of the assets and liabilities. The liability method of accounting for income taxes also requires the Company to reflect the effect of a tax rate change on accumulated deferred income taxes in income in the period in which the change is enacted.

In assessing the realization of deferred income taxes, management considers whether it is more likely than not that any deferred income tax assets will be realized. The ultimate realization of deferred income tax assets is dependent upon the generation of future taxable income during the period in which temporary differences become deductible. If it is more likely than not that some or all of the deferred income tax assets will not be realized, a valuation allowance is recorded.

The Company recognizes any uncertain income tax positions on income tax returns at the largest amount that is more-likely-than-not to be sustained upon audit by the relevant taxing authority. An uncertain income tax position will not be recognized unless it has a greater than 50% likelihood of being sustained. The Company recognizes any interest and penalties related to uncertain tax positions in income tax expense.

The Company reported an income tax benefit of \$265,000 and \$784,000 for the three months ended March 31, 2014, and 2013, respectively. The effective income tax rate for continuing operations was 2% and 4% for the three months ended March 31, 2014, and 2013, respectively. For the three months ended March 31, 2014, and 2013, the effective rate differs from the statutory rate of 35% primarily due to recording a full valuation allowance on the net deferred tax assets.

Recent Accounting Pronouncements

In April 2014, the Financial Accounting Standards Board ("FASB") issued accounting guidance related to reporting of discontinued operations. The guidance changes the requirements for reporting a disposal of a component of an entity or a group of components and requires the disposed component or components to be reported in discontinued operations only if the disposal represents a strategic shift that has (or will have) a major effect on an entity's operations and financial results. The guidance also requires an entity to provide certain disclosures about a disposal of an individually significant component of such entity that does not qualify for discontinued operations presentation in the financial statements. This guidance is effective for fiscal years beginning after December 15, 2014, with early adoption permitted. The Company is currently evaluating the effect this guidance will have on the condensed

consolidated financial statements.

2. Net Income or Loss Per Share

Basic earnings or loss per share is computed by dividing net earnings by the weighted average number of shares outstanding during the period. Diluted earnings or loss per share is computed similarly to basic earnings or loss per share except the weighted average shares outstanding are increased to include additional shares from the assumed exercise of any common stock equivalents using the treasury method, if dilutive. The Company's stock-settled SAR and RSU are considered common stock equivalents for this purpose. The number of additional shares related to these common stock equivalents is calculated using the treasury stock method.

For the three months ended March 31, 2014, and 2013, the Company's stock-settled SAR and RSU were excluded from the diluted per share calculation because their effect on the loss per share from continuing operations was anti-dilutive.

3. Investments

The following tables report the cost and carrying value of available-for-sale investments at March 31, 2014 and December 31, 2013 (in thousands):

March 31, 2014	Cost	Gross Unrealized Gains	Gross Unrealized Losses	Carrying Value
Debt securities: corporate bonds	\$9,197	\$239	\$(75)) \$9,361
Marketable equity securities	29,582	11,355	(200)) 40,737
Total	\$38,779	\$11,594	\$(275)) \$50,098

December 31, 2013	Cost	Gross Unrealized Gains	Gross Unrealized Losses	Carrying Value
Debt securities: corporate bonds	\$8,988	\$213	\$(29)) \$9,172
Marketable equity securities	31,023	10,835	(450)) 41,408
Total	\$40,011	\$11,048	\$(479)) \$50,580

The following tables summarize the market value of those investments in an unrealized loss position for periods less than or greater than 12 months (in thousands):

	March 31, 2014		December 31, 2013	
Less than 12 months	Fair Value	Gross Unrealized Loss	Fair Value	Gross Unrealized Loss
Debt securities: corporate bonds	\$4,616	\$75		
Marketable equity securities	3,514	164	\$4,453	\$254
Total	\$8,130	\$239	\$4,453	\$254

	March 31, 2014		December 31, 2013	
Greater than 12 months	Fair Value	Gross Unrealized Loss	Fair Value	Gross Unrealized Loss
Debt securities: corporate bonds			\$5,744	\$29
Marketable equity securities	\$160	\$36	2,368	196
Total	\$160	\$36	\$8,112	\$225

Marketable Equity Securities

The Company's investment in marketable equity securities was \$40.7 million at March 31, 2014, and principally consisted of common stock of publicly traded small-capitalization companies in the U.S. and select foreign markets. At March 31, 2014, the Company reviewed its equity securities in an unrealized loss position and concluded certain of such securities were not other-than-temporarily impaired as the declines were not of sufficient duration and severity, and publicly-available financial information, collectively, did not indicate impairment. The primary cause of the loss on those securities was normal market volatility. The securities that were deemed other-than-temporarily impaired were recorded as an impairment loss in the period. During the three months ended March 31, 2014, and 2013, there were no material impairment losses recorded.

Debt Securities

The Company owns corporate bonds in its fixed maturity portfolio, which are purchased based on the maturity and yield-to-maturity of the bond and an analysis of the fundamental characteristics of the issuer. At March 31, 2014, there were unrealized losses on certain bonds in the portfolio. The Company does not consider those bonds to be other-than-temporarily impaired because the Company expects to hold, and will not be required to sell, these particular bonds, and it expects to recover the entire amortized cost basis at maturity. There were no impairment losses recorded on debt securities during the three months ended March 31, 2014, and 2013.

Other Investments

The Company's equity investment in Mindjet, Inc. ("Mindjet") represents 28.8% of the voting interest of the company, which is comprised of 15.2% of the common shares and 13.6% of the preferred shares of Mindjet held by the Company. The Company accounts for the investment in common stock using the equity method of accounting which resulted in recording a loss of \$479,000 in the condensed consolidated statement of operations and comprehensive income or loss within equity in loss of affiliate representing 15.2% of Mindjet's net loss for the three months ended March 31, 2014. The investment in preferred stock is held at its initial carrying value in the accompanying condensed consolidated balance sheet. At March 31, 2014, the total carrying value of the investment is \$25.4 million and is subject to impairment testing at each reporting period, or more frequently if facts and circumstances indicate the investment may be impaired. During the three months ended March 31, 2014, financial results indicated the investment might be impaired; however estimates of the value of the enterprise indicated that the investment balance would be recovered. Nonetheless, it is reasonably possible that given the volatile nature of software businesses that circumstances may change in the future which could require the Company to write down the investment to fair value.

4. Disclosures About Fair Value of Financial Instruments:

Recurring Fair Value Measurements

The following tables set forth the Company's financial assets and liabilities that were measured at fair value on a recurring basis at March 31, 2014, and December 31, 2013, by level within the fair value hierarchy. Assets and liabilities measured at fair value are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment and consideration of factors specific to the asset or liability. During the three months ended March 31, 2014, \$4.6 million was transferred from level 1 to level 2 due to low trading volumes.

At March 31, 2014 (in thousands):

Assets	Quoted Prices In Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Balance at March 31, 2014
Available-for-sale equity securities ⁽¹⁾	\$22,699	\$18,038		\$40,737
Available-for-sale debt securities ⁽¹⁾	\$9,361			\$9,361
Readily marketable inventory ⁽²⁾	\$5,158	\$7,133		\$12,291
Derivative instruments ⁽³⁾	\$874	\$1,426		\$2,300
Liabilities				
Derivative instruments ⁽³⁾	\$1,008	\$2,401		\$3,409

At December 31, 2013 (in thousands):

Assets	Quoted Prices In Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Balance at December 31, 2013
Available-for-sale equity securities ⁽¹⁾	\$26,177	\$15,231		\$41,408
Available-for-sale debt securities ⁽¹⁾	\$9,172			\$9,172
Readily marketable inventory ⁽²⁾	\$2,396	\$5,292		\$7,688
Derivative instruments ⁽³⁾	\$346	\$2,108		\$2,454
Liabilities				
Derivative instruments ⁽³⁾	\$436	\$936		\$1,372

⁽¹⁾ Where there are quoted market prices that are readily available in an active market, securities are classified as Level 1 of the valuation hierarchy. Level 1 available-for-sale investments are valued using quoted market prices multiplied by the number of shares owned and debt securities are valued using a market quote in an active market. All Level 2 available-for-sale securities are one class because they all contain similar risks and are valued using market prices and include securities where the markets are not active, that is where there are few transactions, or the prices are not current or the prices vary considerably over time. Inputs include directly or indirectly observable inputs such as quoted prices. Level 3 available-for-sale securities would include securities where valuation is based on unobservable inputs that are supported by little or no market activity and that are significant to the fair value of the assets. This includes certain pricing models, discounted cash flow methodologies and similar techniques that use significant unobservable inputs.

⁽²⁾ Readily marketable inventory comprises commodity inventories that are reported at fair value based on commodity exchange quotations. Canola seed inventories are valued based on the quoted market price multiplied by the quantity of inventory and are classified as Level 1. Canola oil and meal inventories are classified as Level 2 because the inputs are directly observable, such as the quoted market price of the corresponding soybean commodity.

⁽³⁾ Included in this caption are three types of agricultural commodity derivative contracts: swaps, exchange traded futures, and forward commodity purchase and sale contracts. The exchange traded futures contracts are valued based on quoted prices in active markets multiplied by the number of contracts and are classified as Level 1. The swaps are classified as Level 2 because the inputs are directly observable, such as the quoted market prices for relevant commodity futures contracts. The swaps are valued based on the difference of the arithmetic average of the quoted market price of the relevant underlying multiplied by the notional quantities, and the arithmetic average of the prices specified in the instrument multiplied by the notional quantities.

Forward commodity purchase and sale contracts classified as derivatives are valued using quantitative models that require the use of multiple inputs including quoted market prices and various other assumptions including time value. These contracts are categorized as Level 2 and are valued based on the difference between the quoted market price and the price in the contract multiplied by the undelivered notional quantity deliverable under the contract.

Non-Recurring Fair Value Measurements

Assets and liabilities measured at fair value are classified in their entirety based on the lowest level of input that is significant to the fair value measurement. The Company's assessment of the significance of a particular input to the fair value measurement in its entirety requires judgment and considers factors specific to the asset.

The following tables set forth the Company's non-financial assets that were measured at fair value on a non-recurring basis for the three months ended March 31, 2014, and for the year ended December 31, 2013, by level within the fair value hierarchy.

Three Months Ended March 31, 2014 (in thousands):

Asset Description	Quoted Prices In Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total Loss Recorded During the Three Months Ended March 31, 2014
Real estate ⁽¹⁾			\$1,357	\$(2,865)

⁽¹⁾ The Company had a non-recurring fair value measurement of real estate assets with a carrying value of \$4.2 million that was written down to its estimated fair value of \$1.4 million resulting in an impairment charge of \$2.9 million, which was included in earnings for the three months ended March 31, 2014. The impairment was recorded based on the estimated sales price the Company expects to receive upon the sale of this real estate. The impairment loss relates to a property which is not part of UCP's results of operations nor is it included in UCP's inventory of lots.

Year Ended December 31, 2013 (in thousands):

Asset Description	Quoted Prices In Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Unobservable Inputs (Level 3)	Total Gain (Loss) Recorded During the Year Ended December 31, 2013
Intangible asset (exclusive right to use infrastructure and associated water credits) ⁽¹⁾			\$83,897	\$(993)
Real estate ⁽²⁾			\$3,674	\$(417)
Investment in unconsolidated affiliate ⁽³⁾			\$28,679	\$21,181

⁽¹⁾ The Company had a non-recurring fair value measurement for an intangible asset with a carrying amount of \$84.9 million that was written down to its estimated fair value of \$83.9 million resulting in an impairment charge of \$993,000, which was included in earnings for December 31, 2013. The implied fair value was calculated using a discounted cash flow model that incorporated a wide range of assumptions including current asset pricing, price escalation, discount rates, absorption rates, timing of sales, and costs. Given the decline in market prices for similar assets, increases in interest rates, and extended timing of expected absorptions, the Company adjusted its assumptions and judgments in the model from original projections.

⁽²⁾ The Company had a non-recurring fair value measurement of real estate assets with a carrying value of \$4.1 million that was written down to its estimated fair value of \$3.7 million resulting in an impairment charge of \$417,000, which was included in earnings for December 31, 2013. The impairment was recorded based on the estimated sales price the Company expects to receive upon the sale of this real estate. The impairment loss relates to a property which is not part of UCP's results of operations nor is it included in UCP's inventory of lots.

⁽³⁾ The Company had a non-recurring fair value measurement as a result of the merger transaction between Spigit, Inc. ("Spigit") and Mindjet. The transaction resulted in the deconsolidation of Spigit, and the recording of the Company's common and preferred stock investment in Mindjet at fair value, on the date of the transaction. The transaction resulted in a gain of approximately \$21.2 million before income taxes. The fair value of the investment in Mindjet was based on analysis of the financial and operational aspects of the company, including consideration of a discounted cash flow analysis which incorporated a contemporary forecast of the merged Mindjet/Spigit entity going forward. Also considered was a guideline public company analysis which compared business enterprise value-to-revenue ratios for comparable public companies to current revenue metrics for the company. Determination of the business

enterprise value based on the foregoing was then considered in an analysis of the distribution of equity value to the various classes of equity held by PICO in order to reflect differences in value due to differing liquidation, dividend and voting rights. The fair value approach relied primarily on Level 3 unobservable inputs, whereby expected future cash flows were discounted using a rate that includes assumptions regarding an entity's average cost of debt and equity, incorporated expected future cash flows based on internal business plans, and applied certain assumptions about risk and uncertainties. The estimates were based upon assumptions believed to be reasonable, but which by nature are uncertain and unpredictable.

Estimated Fair Value of Financial Instruments Not Carried at Fair Value

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The level within the fair value hierarchy in which the fair value measurements are classified include measurements using quoted prices in active markets for identical assets or liabilities (Level 1), quoted prices for similar instruments in active markets or quoted prices for identical or similar instruments in markets that are not active (Level 2), and significant valuation assumptions that are not readily observable in the market (Level 3).

As of March 31, 2014 and December 31, 2013, the fair values of cash and cash equivalents, accounts payable and receivable approximated their carrying values because of the short-term nature of these assets or liabilities. The estimated fair value of the Company's investments in unconsolidated affiliates approximated their carrying values. The estimated fair value of the Company's debt is based on cash flow models discounted at the then-current interest rates and an estimate of the then-current spread above those rates at which the Company could borrow, which are level 3 inputs in the fair value hierarchy. The estimated fair value of certain of the Company's other investments, which included an investment in preferred stock of a private company, cannot be reasonably estimated.

The following table presents the carrying value and fair value of the Company's financial instruments which are not carried at fair value at March 31, 2014 and December 31, 2013 (in thousands):

	March 31, 2014		December 31, 2013	
	Carrying Amount	Estimated Fair Value	Carrying Amount	Estimated Fair Value
Financial assets:				
Investments in unconsolidated affiliates held at cost	\$19,380	\$19,380	\$19,380	\$19,380
Financial liabilities:				
Debt	\$135,536	\$144,968	\$136,767	\$145,924

Derivatives Notional Amounts

The following tables summarize the notional amount of open derivative positions at March 31, 2014 and December 31, 2013:

	March 31, 2014				Unit of Measure
	Exchange Traded		Non-Exchange Traded		
	(Short) ⁽¹⁾	Long ⁽¹⁾	(Short) ⁽¹⁾	Long ⁽¹⁾	
Futures					
Agricultural Commodities	(54,855) 31,708			Tons
Natural Gas		400,000			MMBtus ⁽²⁾
Forwards			(117,801) 72,900	Tons
Swaps				15,000	Tons
	December 31, 2013				
	Exchange Traded		Non-Exchange Traded		Unit of Measure
	(Short) ⁽¹⁾	Long ⁽¹⁾	(Short) ⁽¹⁾	Long ⁽¹⁾	
Futures					

Edgar Filing: PICO HOLDINGS INC /NEW - Form 10-Q

Agricultural Commodities	(23,038) 34,380		Tons
Natural Gas		460,000		MMBtus ⁽²⁾
Forwards			(132,428)	30,367 Tons
Swaps				75,000 Tons

17

(1) Exchange and non-exchange traded futures, forwards, and swaps are presented on a gross (short) and long position basis.

(2) Million Metric British Thermal Units.

The gross derivative asset or liability is included within its respective other assets or liabilities account balance in the accompanying condensed consolidated balance sheets.

The table below summarizes the effect of derivative instruments on the condensed consolidated statements of operations and comprehensive income or loss (in thousands):

	Location	Gain (Loss) Recognized in Income on Derivatives	
		Three Months Ended March 31, 2014	2013
Futures	Cost of canola oil and meal sold	\$(1,054)	\$(2,171)
Forwards	Cost of canola oil and meal sold	1,474	(814)
Swaps	Cost of canola oil and meal sold	3,675	367
		\$4,095	\$(2,618)

5. Intangible Water Assets

The Company owns the following indefinite-lived intangible water assets within its water resource and water storage operations segment (in thousands):

	March 31, 2014	December 31, 2013
Pipeline rights and water credits at Fish Springs Ranch	\$83,897	\$83,897
Pipeline rights and water rights at Carson-Lyon	24,804	24,804
Other	16,203	16,179
	\$124,904	\$124,880

6. Debt

As of March 31, 2014, the Company was in compliance with all debt covenants under the Company's credit facility. During the three months ended March 31, 2014, the Company negotiated new values for the debt service coverage ratio covenant such that there is no set debt service coverage ratio at March 31, 2014, and a ratio of 1.40 and 1.50 at June 30, 2014, and September 30, 2014, respectively. Beyond September 2014, the debt service coverage ratio reverts back to the initial value of 1.75. Consequently, if the Company's canola business continues to report losses, it is possible the Company could breach one or more of the debt covenants which would require obtaining a waiver from the lenders, or it could require the Company to invest additional capital into the business. As of March 31, 2014, the Company had approximately \$27.3 million of unused lines of credit within the real estate operations and \$22.3 million in agribusiness operations.

The following details the Company's consolidated debt (in thousands):

	March 31, 2014	December 31, 2013
Agribusiness term loan:		
4.75% payments through 2017	\$82,042	\$83,533
Agribusiness working capital debt:		
6% payments through 2017	4,750	4,750
Other agribusiness debt:		
4.99% payments through 2014	151	159
Swiss debt:		
3.7% payments through 2014	14,139	14,012
3.8% payments through 2014		3,363
Mortgage debt:		
3.9% to 4.75% payments through 2015	23,629	17,307
5% to 5.5% payments due from 2014 - 2016	8,676	11,491
6% to 6.5% payments through 2036	545	548
10% payments through 2014	1,604	1,604
	\$135,536	\$136,767

7. Segment Reporting

PICO is a diversified holding company engaged in the following operating and reportable segments: Water Resource and Water Storage Operations, Real Estate Operations, Agribusiness Operations, and Corporate. The Enterprise Software segment, which started and ended during 2013, will continue to be presented in historical periods as a segment.

The accounting policies of the reportable segments are the same as those described in the Company's 2013 Annual Report on Form 10-K filed with the SEC, and in Note 1 Basis of Presentation.

Management analyzes segments using the following information:

Segment assets (in thousands):

	March 31, 2014	December 31, 2013
Total Assets:		
Water resource and water storage operations	\$193,118	\$193,105
Real estate operations	276,670	276,954
Agribusiness operations	157,942	155,005
Corporate	123,960	137,488
	\$751,690	\$762,552

Segment revenues and loss before taxes (in thousands):

	Three Months Ended	
	March 31,	
	2014	2013
Revenue:		
Water resource and water storage operations	\$136	\$184
Real estate operations	25,766	11,939
Agribusiness operations	34,867	39,565
Enterprise software		3,650
Corporate	507	1,470
Total revenue	\$61,276	\$56,808
Loss before income taxes:		
Water resource and water storage operations	\$(1,985)	\$(2,141)
Real estate operations	(6,277)	(711)
Agribusiness operations	(4,192)	(9,715)
Enterprise software		(1,150)
Corporate	(3,237)	(3,842)
Total loss before income taxes	\$(15,691)	\$(17,559)

8. Commitments and Contingencies

Neither PICO nor its subsidiaries are parties to any potentially material pending legal proceedings other than the following:

Fish Springs Ranch, LLC:

In September 2007, the Company reached a \$7.3 million financial settlement with the Pyramid Lake Paiute Tribe of Indians relating to the exportation of water from the properties owned by Fish Springs Ranch, LLC. The settlement is pending ratification by the United States Congress, but we cannot be certain as to when the United States Congress will act on this matter. The Company has paid \$3.7 million to the Tribe and accrued \$3.6 million for the balance owed. No material developments occurred relating to this dispute or the settlement agreement during the first three months of 2014.

The Company is subject to various other litigation matters that arise in the ordinary course of its business. Because litigation is inherently unpredictable and unfavorable resolutions could occur, assessing contingencies is highly subjective and requires judgments about future events. When evaluating contingencies, we may be unable to provide a meaningful estimate due to a number of factors, including the procedural status of the matter in question, the presence of complex or novel legal theories, and/or the ongoing discovery and development of information important to the matters. In addition, damage amounts claimed in litigation against us may be unsupported, exaggerated or unrelated to possible outcomes, and as such are not meaningful indicators of our potential liability. We regularly review contingencies to determine the adequacy of our accruals and related disclosures. The amount of ultimate loss may differ from these estimates, and it is possible that cash flows or results of operations could be materially affected in any particular period by the unfavorable resolution of one or more of these contingencies.

Whether any losses finally determined in any claim, action, investigation or proceeding could reasonably have a material effect on our business, financial condition, results of operations or cash flows will depend on a number of variables, including: the timing and amount of such losses; the structure and type of any remedies; the significance of

the impact any such losses, damages or remedies may have on our condensed consolidated financial statements; and the unique facts and circumstances of the particular matter that may give rise to additional factors.

Item 2: Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion and analysis of financial condition and results of operations should be read together with the Unaudited Condensed Consolidated Financial Statements and accompanying Notes included elsewhere in this report, and the Consolidated Financial Statements and accompanying Notes included in our Annual Report on Form 10-K for the year ended December 31, 2013.

Note About "Forward-Looking Statements"

This Quarterly Report on Form 10-Q (including the "Management's Discussion and Analysis of Financial Condition and Results of Operations" section) contains "forward-looking statements," as defined in Section 21E of the United States Securities Exchange Act of 1934, as amended, regarding our business, financial condition, results of operations, and prospects, including, without limitation, statements about our expectations, beliefs, intentions, anticipated developments, and other information concerning future matters. Words such as "may," "will," "could," "expects," "anticipates," "intends," "plans," "believes," "seeks," "estimates," "should," "target," "projects," "contemplates," "predicts," "potential," "could," and similar expressions or variations of such words are intended to identify forward-looking statements, but are not the exclusive means of identifying forward-looking statements in this Quarterly Report on Form 10-Q. Although forward-looking statements in this Quarterly Report on Form 10-Q reflect the good faith judgment of our management, such statements can only be based on current expectations and assumptions. Consequently, forward-looking statements are inherently subject to risks and uncertainties, and the actual results and outcomes could differ from what is expressed or implied by the forward-looking statements. Factors that could cause or contribute to such differences in results and outcomes include, without limitation, those discussed under the headings "Item 1A. Risk Factors" in our Annual Report on Form 10-K for the year ended December 31, 2013, in Item 1A of Part II of this Quarterly Report on Form 10-Q, and in other filings made from time to time with the United States Securities and Exchange Commission ("SEC") after the date of this Quarterly Report on Form 10-Q. Readers are urged not to place undue reliance on these forward-looking statements, which speak only as of the date of this Quarterly Report on Form 10-Q. We undertake no obligation to (and we expressly disclaim any obligation to) revise or update any forward-looking statement, whether as a result of new information, subsequent events, or otherwise (except as may be required by law), in order to reflect any event or circumstance which may arise after the date of this Quarterly Report on Form 10-Q. Readers are urged to carefully review and consider the various disclosures made in this Quarterly Report on Form 10-Q and our Annual Report on Form 10-K and other filings with the SEC.

BUSINESS STRATEGY AND GOALS

PICO Holdings, Inc. is a diversified holding company. In this Quarterly Report, PICO and its subsidiaries are collectively referred to as "PICO," "the Company," or by words such as "we" and "our." We seek to build and operate businesses where we believe significant value can be created from the development of unique assets and to acquire businesses which we identify as undervalued and where our management participation in operations can aid in the recognition of the business's fair value, as well as create additional value.

Our objective is to maximize long-term shareholder value and to manage our operations to achieve a superior return on net assets over the long term, as opposed to short-term earnings. We own and operate several diverse businesses and assets. Our portfolio of businesses is designed to provide a mix of revenues and income from both long-term assets that may require several years to develop and monetize and shorter-term operations that should generate recurring revenue each quarter.

As of March 31, 2014 our business is separated into the following operating segments:

- Water Resource and Water Storage Operations;
- Real Estate Operations;

- Agribusiness Operations; and
- Corporate

21

As of March 31, 2014, our major consolidated subsidiaries are (wholly-owned unless noted):

- Vidler Water Company, Inc. (“Vidler”) which acquires and develops water resources and water storage operations in the southwestern United States, with assets and operations in Nevada, Arizona, Colorado and New Mexico;
- UCP, Inc. (“UCP”), a 57.5% owned subsidiary which is a homebuilder and land developer in markets located in California and Puget Sound area of Washington State;
- PICO Northstar Hallock, LLC, an 88% owned subsidiary, doing business as Northstar Agri Industries (“Northstar”), which operates a canola seed crushing facility in Hallock, Minnesota.

RESULTS OF OPERATIONS — THREE MONTHS ENDED MARCH 31, 2014 AND 2013

Overview of Economic Conditions, Other Recent Events, and Impact on Results of Operations

The economic environment and housing slow-down in the U.S. between 2007 and 2011 significantly decreased the rate of growth in the Southwest and the demand for our water and real estate assets in certain markets. Numerous factors can affect the performance of an individual market. However, we believe that trends in employment, housing inventory, affordability, interest rates and home prices have a particularly significant impact. We expect that these market trends will have an impact on our operating performance. Trends in housing inventory, home affordability, employment, interest rates and home prices are the principal factors that affect our revenue and many of our costs and expenses. For example, when these trends are favorable, we expect our revenue, as well as our related costs and expenses, to generally increase; conversely, when these trends are negative, we expect our revenue and cost of sales to generally decline, although in each case the impact may not be immediate. There has been a recovery and improvement in the housing markets from levels seen during the slow-down (with seasonal fluctuations) which has led to increased levels of real estate development activity in the past two to three years, and we believe that a continuation of the housing recovery will lead to increased demand for our real estate, and intangible and tangible water assets (which are held in our real estate segment and water resource and water storage segment). Individual markets continue to experience varying results, as local home inventories, affordability, and employment factors strongly influence each local market and any deterioration in the markets in which we operate has the potential to cause additional impairment losses on our real estate and water assets.

In addition, we experienced weather-related disruptions in our agribusiness operation, which is located in Hallock, Minnesota, in the first quarter of 2014. These disruptions negatively impacted our results of operations in the first quarter of 2014.

The focus of our operations is building long-term shareholder value. Our revenues and results of operations can and do fluctuate widely from period to period. For example, we recognize revenue from the sale of real estate and water assets when specific transactions close, and as a result, sales of real estate and water assets for any individual quarter are not necessarily indicative of revenues for future quarters or the full financial year.

PICO Shareholders' Equity

Our shareholders' equity decreased \$11.4 million or \$0.50 per share, during the three months ended March 31, 2014, from \$472.9 million, or \$20.79 per share at December 31, 2013 to \$461.4 million, or \$20.29 per share at March 31, 2014. The decrease in our shareholders' equity was primarily due to the comprehensive loss of \$12.7 million incurred during the period.

Total Assets and Liabilities

Total assets decreased by \$10.9 million from \$762.6 million at December 31, 2013 to \$751.7 million at March 31, 2014. The Company's real estate and water assets increased \$35.3 million primarily due to acquisition of real estate by UCP, Inc. ("UCP"). Cash and cash equivalents decreased \$45.6 million due to cash used for purchases of real estate and overhead. During the first three months of 2014, total liabilities increased by \$3.4 million, from \$197.7 million at December 31, 2013 to \$201.1 million at March 31, 2014.

First Quarter Net Loss before Taxes, Income Taxes and Net Loss

Our reported loss before income taxes for the three months ended March 31, 2014 was \$15.7 million compared to \$17.6 million for the same period in 2013. The year-over-year reduction in the reported loss was primarily due to a \$5.5 million improvement in our agribusiness segment combined with a \$1.2 million improvement due to no losses included in the current period from our previously owned software segment, offset by an increase of \$5.6 million in the loss reported by our real estate segment. We continue to record a full valuation allowance on our net deferred tax assets, which resulted in minimal income tax expense or benefit for the first quarter of 2014 and 2013. For the three months ended March 31, 2014, we reported a net loss from continuing operations of \$13.2 million, or \$0.58 per share which was generally consistent with the net loss of \$15 million, or \$0.66 per share we reported for the three months ended March 31, 2013.

For the three months ended March 31, 2014, our investment in Mindjet common stock, which represents 15.2% of the common stock voting interest in that company, resulted in recording a loss of \$479,000 in the statement of operations within equity in loss of affiliate. During the first quarter of 2014, financial results indicated that our investment might be impaired, however estimates of the value of the enterprise indicated that our investment balance of \$25.4 million would be recovered. Nonetheless, it is reasonably possible that given the volatile nature of software businesses that circumstances may change in the future which could require us to write down the investment to fair value.

Noncontrolling Interests

Loss attributable to noncontrolling interests was \$2.7 million and \$1.8 million for the three months ended March 31, 2014 and 2013, respectively. A total of \$2 million of the loss attributable to noncontrolling interest recorded during the three months ended March 31, 2014 was based on UCP's reported net loss of \$3.4 million.

Comprehensive Income or Loss

For the first quarter of 2014, we reported comprehensive loss of \$12.7 million which consisted primarily of a net loss of \$13.2 million, offset by an increase of \$487,000 in unrealized appreciation on available-for-sale investments.

For the first quarter of 2013, we reported comprehensive loss of \$14 million. This comprehensive loss consisted of a net loss of \$15 million, offset by an increase of \$752,000 in unrealized appreciation on available-for-sale investments.

Segment Results of Operations

Our segment revenue and loss before income taxes for the first quarter of 2014 and 2013 were as follows (in thousands):

	Three Months Ended		
	March 31, 2014	2013	Change
Revenue:			
Water Resource and Water Storage Operations	\$136	\$184	\$(48)

23

First Quarter Revenue

The majority of our recurring revenue is expected to occur in our agribusiness and real estate operations. Both of these segments generate revenue from volume sale of their products. Our first quarter revenue was \$61.3 million in 2014, compared to \$56.8 million in 2013, an increase of \$4.5 million year-over-year. This increase was primarily due to a \$13.8 million increase in revenue from additional sales volume in our real estate operations, offset by a decrease in agribusiness revenues of \$4.7 million due primarily to lower prices received on canola oil sold, and a decrease in software revenues of \$3.7 million now that we no longer own the software segment.

First Quarter Costs and Expenses

First quarter costs and expenses were \$77 million in 2014, compared to \$74.4 million in 2013, an increase in year-over-year expenses of \$2.6 million. Our agribusiness operations increased production and units sold however, we reported a decrease in expenses primarily from a \$10.5 million decrease in cost of sales of canola oil and meal. Our real estate segment reported an increase in expenses of \$19.4 million which was primarily due to a \$3.5 million increase in operating expenses and a \$13 million increase in cost of real estate sold due to an increase in homes sold year-over-year.

WATER RESOURCE AND WATER STORAGE OPERATIONS

Thousands of dollars	Three Months Ended		
	March 31,		
	2014	2013	Change
Revenue:			
Sale of real estate and water assets	\$25	\$4	\$21

Loss before income taxes	\$(1,985)	\$(2,141)	\$156

Historically, our water and water resource segment revenue and results have been volatile. Since the date of closing generally determines the accounting period in which the sales revenue and cost of sales are recorded, reported revenue and income or loss fluctuate from period to period, depending on the dates when specific transactions close.

Consequently, revenue in any one year is not necessarily indicative of likely revenue in future years.

Segment Revenue

We did not generate any significant sales of real estate and water assets in the first quarter of 2014 and 2013. Revenue in both periods consists primarily of lease income and option fees.

Segment Expenses

Our total expenses in the first quarter of 2014 were largely unchanged as compared to the first quarter of 2013, declining by \$204,000 from \$2.3 million in 2013 to \$2.1 million in 2014.

Project expenses consist of costs related to the development of existing water resources, such as maintenance and professional fees. Project costs are expensed as appropriate and fluctuate from period to period depending on activity in our water resource projects. Project expenses principally relate to:

- the operation and maintenance of the Vidler Arizona Recharge Facility;
- certain costs related to intangible water rights in the Tule Desert groundwater basin and the Dry Lake Valley (both part of the Lincoln County, Nevada agreement);
- the operation and sale of our farm properties in Idaho (ceased with the sale of these properties in June 2013); and
- certain costs for water resource development in Nevada and New Mexico.

REAL ESTATE OPERATIONS

As of March 31, 2014, our businesses in the real estate operations segment are primarily conducted through our 57.5% owned subsidiaries UCP, Inc. (“UCP”) and UCP, LLC and its homebuilding and land development operations in California and Washington.

UCP continues to acquire real estate in its target markets to increase its land inventory and ability to either build and sell homes through its wholly owned subsidiary, Benchmark Communities, or develop land and sell lots to third-party homebuilders. UCP is actively acquiring and developing lots in California and Washington State in an effort to maintain and grow its lot supply. In addition to expanding its business in existing markets in California and Washington State, UCP continues to evaluate opportunities to expand into other markets with favorable housing demand fundamentals, including, in particular, long-term population and employment growth. On April 10, 2014, UCP, LLC acquired the assets of Citizens Homes Inc. (“Citizens”) for \$15 million. Citizens builds and sells homes in North Carolina, South Carolina and Tennessee. The owners of Citizens are eligible to receive earn-out payments from UCP, LLC of up to \$6 million, in the aggregate, based on performance over the next five years.

Our real estate sales are contingent upon numerous factors and, as such, the timing and volume of real estate sales in any one quarter is unpredictable. Historically, the level of real estate sales has fluctuated from period to period. Accordingly, it should not be assumed that the level of sales as reported will be maintained in future reporting periods.

Owned and Controlled Lots

As of March 31, 2014, and December 31, 2013, UCP owned or controlled, pursuant to purchase or option contracts, an aggregate of 7,931 and 5,380 lots, respectively. The following tables present certain information with respect to our

owned and controlled lots as of March 31, 2014 and December 31, 2013.

25

	As of March 31, 2014		
	Owned	Controlled ⁽¹⁾	Total
Central Valley Area - California	1,666	251	1,917
Monterey Bay Area - California	1,505	152	1,657
South San Francisco Bay Area - California	107	361	468
Southern California	116	135	251
Puget Sound Area - Washington	881	2,757	3,638
Total	4,275	3,656	7,931

	As of December 31, 2013		
	Owned	Controlled ⁽¹⁾	Total
Central Valley Area - California	1,658	322	1,980
Monterey Bay Area - California	1,517	154	1,671
South San Francisco Bay Area - California	19	465	484
Southern California		251	251
Puget Sound Area - Washington	836	158	994
Total	4,030	1,350	5,380

⁽¹⁾ Controlled lots are those subject to a purchase or option contract and we cannot provide any assurances that these will pass our rigorous due diligence process.

In addition to the lots presented above, we owned 221 and 163 lots with homes in various stages of development at March 31, 2014 and December 31, 2013, respectively.

Our wholly-owned subsidiary, Bedrock Land Development, Inc. (“Bedrock”) also owns real estate in Fresno, California that is tentatively approved for the development of 167 lots. Bedrock is not a part of UCP’s operations.

First Quarter Segment Revenue and Gross Margin

In the following discussion, gross margin is defined as revenue less cost of sales, and gross margin percentage is defined as gross margin divided by revenues.

In the first quarter of 2014, total segment revenue increased by 116% to \$25.8 million as compared to total segment revenue of \$11.9 million in the first quarter of 2013. This increase in revenue of \$13.8 million was primarily attributable to the following combination of factors:

- an increase in the number of homes sold to 52 homes in the first quarter of 2014 as compared to 12 homes in the first quarter of 2013. The number of selling communities at the end of the period increased from five in the first quarter of 2013 to 12 in the first quarter of 2014;
- an increase in the average selling price (“ASP”) of homes sold of approximately 35% to \$489,000 per home in the first quarter of 2014 as compared to \$361,000 per home in the first quarter of 2013;
- a decrease in the number of lots sold to two units in the first quarter of 2014 as compared to 54 units in the first quarter of 2013; and
- a decrease in the ASP of lots sold to \$87,000 per lot in the first quarter of 2014 as compared to \$138,000 per lot in the first quarter of 2013.

Total gross margin increased by approximately \$823,000 to \$4.6 million in the first quarter of 2014 as compared to \$3.8 million in the first quarter of 2013. This increase in gross margin was primarily due to the year-over-year increase in volume and ASP of homes sold which was partially offset by the year-over-year decline in the volume and

ASP of lots sold.

The gross margin percentage of homes sold declined to 18% in the first quarter of 2014 as compared to 20% in the first quarter of 2013. This gross margin percentage change was primarily attributable to the different cost basis of the active selling communities in 2014 as compared to 2013. This decline in the gross margin percentage of homes sold was more than offset by the increased volume of homes sold in the first quarter of 2014 (52 homes) as compared to the first quarter of 2013 (12 homes).

26

The increased volume of home sales was driven by a year-over-year increase in the number of selling communities and an increased sales rate at certain of these selling communities.

The gross margin percentage of lots sold in the first quarter of 2014 was 15% as compared to a gross margin percentage of lots sold in the first quarter of 2013 of 39%. The gross margin percentage of lots sold is not necessarily directly comparable from period to period due to several factors including the stage of development and the location of the lots as well as the cost basis in the lots. In addition, there was a significant year-over-year reduction in the volume of lots sold in the first quarter of 2014 (2 units) as compared to the first quarter of 2013 (54 units). The volume and revenue of lots sold can vary considerably from period to period; such sales tend to be driven by discrete transactions which are motivated by several considerations, including opportunistic conditions in the markets in which we own lots.

Summary Results of UCP Revenue and Gross Margin

	Three Months Ended		
	March 31,		
	2014	2013	Change

Gross margin - total	\$4,574	\$3,751	\$823
Gross margin percentage - total	18	% 32	% (14)%

Segment Results of Operations

The year-over-year first quarter segment loss increased by \$5.6 million from a net loss of \$711,000 in 2013 to a net loss of \$6.3 million in 2014. There was an increase in the gross margin of approximately \$823,000 generated by the sale of lots and homes at UCP. In addition, there was an increase in operating costs of \$3.5 million in the first quarter of 2014 as compared to the first quarter of 2013. The year-over-year increase in costs is due primarily to increased salaries and benefits as UCP continues to expand its operations as well as increased sales and marketing costs as the number of sales communities increased year-over-year.

Also included in operating costs for the three months ended March 31, 2014, is stock-based compensation expense of \$1 million recorded on previously granted RSU and new stock-based awards granted in 2014. During the first quarter of 2014, certain officers of UCP received a total of 166,081 stock options with an exercise price of \$16.20 (being the fair value of UCP's Class A shares on the date the awards were granted) and 58,334 RSU. The aggregate grant date fair

value of both awards was \$2.2 million and will be recognized over the four year vesting period. There was no corresponding expense in the first quarter of 2013.

Not part of the UCP results for the three months ended March 31, 2014, is a \$2.9 million impairment loss recorded on undeveloped property owned in San Diego County, California. (The only real estate in this segment not owned by UCP is the undeveloped property in San Diego County and a property in Fresno that is owned by Bedrock). The property was purchased several years ago in conjunction with a plan to develop an alternative energy plant on the site. Concurrent with our purchase of the property we entered into an option to sell the property to the developer of the project. Ultimately the developer was unsuccessful in completing the project and, as a result, the option on the property was never exercised. Alternative development opportunities have proven unsuccessful and the property has also been impacted by protected species issues. As a result we have decided to sell the property as-is. Accordingly, we have written down the carrying value of the property to our estimate of the current undeveloped fair value of the property. There was no corresponding charge in the first quarter of 2013.

AGRIBUSINESS OPERATIONS

Segment Revenue and Gross Margin

We generated revenue from sales of canola oil and meal of \$34.9 million in the first quarter of 2014 as compared to revenue of \$39.6 million in the first quarter of 2013. The decline in revenue resulted from a year-over-year decline in the market price of our canola oil and meal products despite our year-over-year production volumes increasing by 8.4%. Our year-over-year gross margin (revenue less total cost of goods sold) improved by \$5.8 million to \$693,000 in the first quarter of 2014 from a gross margin loss of \$5.1 million in the first quarter of 2013.

We manage our canola seed crushing operations by reference to the crush margin (revenue less cost of canola oil and meal sold). Our year-over-year crush margin improved by \$5.2 million to \$4.2 million in the first quarter of 2014 from a crush margin loss of \$1 million in the first quarter of 2013.

The year-over-year gross margin and crush margin improvement is due to the overall improvement in canola board crush margin (the margin produced by the quoted market price of soybean oil and soybean meal factored for appropriate canola product yields and protein content less the quoted market price of canola seed as factored for the foreign exchange rate between the Canadian dollar and the U.S. dollar). The average board crush margin in the first

quarter of 2014 was approximately \$238 per ton as compared to approximately \$110 per ton in the first quarter of 2013. This board margin improvement was primarily due to the relatively greater decline in price of our main input cost, canola seed, versus our product pricing for canola meal and oil. Seed pricing was driven by high canola yields and a plentiful harvest for the 2013 crop.

This was in contrast to disappointing yields for the 2012 canola crop which led to an extremely challenging crush margin environment through most of 2013. Canola board crush margins were unusually low at the start of 2013 and continued to decline through the first quarter of 2013. In 2012, Canadian canola seed harvested yields were 20% below the trend line average yield, resulting in canola seed scarcity and high prices. The board crush margins and the total basis (basis is the difference between our actual crush margin and the board margin; differences arise from the discount or premiums we obtain for seed purchased and oil and meal sold compared to the board pricing) combine to generate our crush margins.

However, despite the year-over-year improvement in our gross and crush margins, we still incurred a loss of \$4.2 million for the first quarter of 2014 (an improvement of \$5.5 million as compared to the loss incurred in the first quarter of 2013). This loss was primarily due to two reasons:

First, we were unable to crush sufficient volumes of canola to cover other variable and fixed costs. During the first quarter of 2014, our plant crushed at an average rate of 830 U.S. tons per day compared to 766 tons per day during the first quarter of 2013. However, we had crushed 1,041 U.S. tons per day in the fourth quarter of 2013. The reduction in the daily crush rate from the fourth quarter of 2013 was due to weather-related logistics disruptions to both inbound seed deliveries and rail service interruptions for our outbound products. Extended periods of subzero temperatures and frequent blizzards reduced our rail service provider's ability to provide sufficient service to our plant. However, as the extremely harsh winter weather subsided in late February of this year, the rail service to our plant has improved in both frequency and volume enabling our daily crush rate to improve in March and April, 2014 in comparison to the average crush rate obtained in the first quarter of 2014.

Second, our hedging strategy locked in historically attractive board margins prior to the commencement of the first quarter of 2014. However, the actual spot board crush margins in the first quarter of 2014 exceeded historical levels. As a result, we recorded a charge in the first quarter of 2014 of \$4.1 million for both realized and unrealized losses on our derivative contracts that is included in our total cost of goods sold.

In addition, readily marketable inventory at March 31, 2014 is carried at net realizable value on our consolidated balance sheet based on quoted market prices in active markets. Changes in the value of our readily marketable inventory are recognized in cost of canola oil and meal sold each period. However, we aim to minimize the effects of changing prices in our inventory primarily through the use of traded futures contracts.

Segment Expenses

Plant costs and overhead in the first quarter of 2014 and 2013 include salaries and benefits, consulting fees, insurance, and office costs. Also included in these costs are the variable costs of crushing operations including costs for energy, process chemicals, production labor and utilities as well as marketing fees under our off-take agreement with Purina Animal Nutrition, LLC (formerly Land O Lakes Purina Feed, LLC). Plant costs and overhead also include certain due diligence expenses for potential expansion opportunities within the Agribusiness segment.

As of March 31, 2014, we had total debt of \$86.9 million principally comprised of an \$82 million term loan and \$4.8 million outstanding on a revolving credit facility. During the first three months of 2014 and 2013, we recorded interest expense of \$1.3 million and \$1.4 million respectively.

CORPORATE

Thousands of dollars	Three Months Ended		
	March 31,		
	2014	2013	Change

Stock-based compensation expense	(958)	(946)	(12)
Deferred compensation expense	(599)	(618)	19
Foreign exchange gain (loss)	233	(854)	1,087
Other	(2,275)	(2,714)	439
Segment total expenses	(3,745)	(5,312)	1,567
Loss before income taxes	\$(3,238)	\$(3,842)	\$604

The corporate segment consists of cash, fixed-income securities and equity securities, including the portfolio of Swiss equity securities and our investment in Mindjet. The corporate segment also includes the assets, liabilities and the results of operations of our oil and gas venture and other parent company assets and liabilities which are not contained in other segments, including the assets and liabilities of the deferred compensation trusts held for the benefit of certain officers and non-employee directors. Revenue consists of our share of revenue generated from oil and gas sales, interest earned on cash balances and securities and realized gains or losses on the sale or impairment of securities and can vary considerably from year to year. The segment results above do not include our share of the income or loss from any investments we account for using the equity method.

The expenses recorded in this segment primarily consist of parent company costs which are not allocated to our other segments, for example, salaries and benefits, directors' fees, shareholder costs, rent for our head office, stock-based compensation expense, deferred compensation expense, and expenses related to the operations of our oil and gas venture.

In any one year, corporate segment results can fluctuate due to one or more individually significant revenue or expense items which occur irregularly, for example, realized gains or losses on the sale of fixed-income or equity securities, or which can change significantly from period to period, such as foreign currency gains or losses. Consequently, corporate segment results of operations are not typically comparable from year to year.

Deferred Compensation Revenue and Expense

The participants in the deferred compensation plan bear the risk of the investment return on the deferred compensation assets, similar to a defined contribution plan such as a 401(k) plan. The investment income and realized gains or losses from the deferred compensation assets are recorded as revenue in the period that they are earned, and a corresponding and offsetting cost or benefit is recorded as deferred compensation expense or recovery. The change in net unrealized appreciation or depreciation in the deferred compensation assets is charged to compensation expense. Once the deferred compensation has been distributed, over the lifetime of the assets, the revenue and deferred compensation expense equal and there is no net effect on segment results.

Segment Revenue

The corporate segment recorded revenue of \$507,000 in the first quarter of 2014, compared to \$1.5 million in the first quarter of 2013. The \$1 million decrease in segment revenue is principally due to a decreased level of realized gains (from securities held outside the deferred compensation plan) in the first quarter of 2014 as compared to the first quarter of 2013.

Segment Expenses

First quarter year-over-year segment expenses decreased by \$1.6 million to \$3.7 million in the first quarter of 2014 as compared to \$5.3 million in the first quarter of 2013. This decrease in total segment expenses was primarily due to an increased gain in foreign exchange of \$1.1 million.

Stock-Based Compensation Expense

Stock-based compensation expense is calculated based on the closing price of PICO common stock on the date the awards were granted and is recognized over the vesting period of the awards. As of March 31, 2014, there was \$2.1 million of unrecognized stock-based compensation expense, which we expect to record ratably until the last award vests in October, 2014.

Foreign Exchange Gain or Loss

The foreign exchange gain or loss recorded in this segment primarily results from the effect of fluctuations in the exchange rate between the Swiss Franc and the U.S. dollar on the amount of an inter-company loan to PICO European, which is denominated in Swiss Francs.

Segment expenses were decreased by a \$233,000 foreign exchange gain in the first quarter of 2014, compared to an \$854,000 foreign exchange loss in the first quarter of 2013.

ENTERPRISE SOFTWARE

Thousands of dollars	Three Months Ended March 31, 2013
Revenue:	
Software and services revenue	\$3,650
Costs and expenses:	
Cost of software and services sold	(1,301)
Interest expense	(76)
Depreciation	(14)
Operating expenses	(3,409)
Segment total expenses	(4,800)
Loss before income taxes	\$(1,150)

On September 10, 2013, Spigit was merged with Mindjet. As a result of the merger transaction, we no longer own a controlling financial interest in Spigit, and consequently we no longer operate an enterprise software segment.

LIQUIDITY AND CAPITAL RESOURCES—THREE MONTHS ENDED MARCH 31, 2014 AND 2013

Cash Flow

Our assets primarily consist of real estate and tangible and intangible water assets, property, plant and equipment, cash and cash equivalents, and investments in publicly-traded securities. Our liquid funds are generally held in money

market funds.

31

Our cash and cash equivalents and available-for-sale investments held in each segment at March 31, 2014 were as follows:

- our water resource and water storage operations holds cash of \$460,000;
- our real estate operations segment holds cash of \$51.7 million;
- our agribusiness operations segment holds cash of \$1.7 million; and
- our corporate segment holds cash of \$38.6 million, and marketable equity and debt securities with a market value of \$40.7 million and \$9.4 million, respectively. Included in those totals is \$2.1 million in cash, \$10.6 million in equities and \$9.4 million in debt securities that are held in deferred compensation rabbi trusts accounts, which will be used to pay the related and offsetting deferred compensation liabilities.

Our primary sources of funds include existing cash, cash flows from our real estate and agribusiness operations, the sale of tangible and intangible water assets, loans and debt or equity offerings. We are not subject to any debt covenants which limit our ability to obtain additional financing through debt or equity offerings.

Our cash flows fluctuate depending on the capital requirements of our operating subsidiaries. The cash flow profile of our principal operating subsidiaries is as follows:

Water Resource and Water Storage Operations

A substantial portion of revenue in this segment has come from the one-time sale of real estate and water assets. The assets are typically long-term water resource development projects to support growth for particular communities in the southwestern U.S. The timing and value of sales and cash flows depend on a number of factors which are difficult to project, and cannot be directly compared from one period to another. Our project expenses are generally discretionary in nature.

Real Estate Operations

We are a homebuilder and developer in Northern California and select markets in the Puget Sound area of Washington State. We finance additional acquisitions, development and construction costs from our existing cash, proceeds of the sale of existing lots and homes, and/or through external financing. On April 10, 2014, UCP LLC acquired the assets of Citizens Homes Inc. (“Citizens”) for \$15 million. Citizens builds and sells homes in North Carolina, South Carolina, and Tennessee. The owners of Citizens are eligible to receive earn-out payments from UCP, LLC of up to \$6 million, in the aggregate, based on performance over the next five years.

Agribusiness Operations

We recorded \$34.9 million in sales of canola oil and meal and \$34.2 million in cost of sales of such products for the first quarter of 2014. Generally, during periods when commodity prices are rising, we require increased use of cash to support working capital to acquire inventories and fund daily settlement requirements on exchange traded futures that we use to minimize price risk related to our inventories. We have financed operations with cash received from sales of canola products, and cash from our revolving credit facility. PICO also invested an additional \$4.6 million of preferred capital, with a 10% rate of return, during the first quarter of 2014 to fund planned capital expenditure that will increase the plant’s crushing capacity. While we negotiated reductions in certain of our debt covenants during 2014, if our canola business continues to report losses, it is possible we could breach one or more of our debt covenants which would require us to obtain a waiver from our lenders, or it could require us to provide additional capital into the business.

At March 31, 2014, Northstar had borrowed a total of \$86.8 million under a \$116.5 million credit agreement which consisted of:

- \$82 million borrowed under non-recourse senior secured multi-draw term loans; and
- \$4.8 million borrowed under a \$27 million non-recourse senior secured revolving credit facility to provide working capital on completion of construction. During 2012, we amended the credit agreement to increase the revolving credit facility from \$10.5 million to \$27 million. The revolving credit facility will be available until August 14, 2017.

The credit agreement contains the following significant financial covenants and the Company was in compliance with each covenant at March 31, 2014.

1) Debt to Adjusted Capitalization Ratio: Northstar will not permit its debt to adjusted capitalization ratio as of the last day of any quarter to be more than 0.60 to 1.00. At March 31, 2014, Northstar's ratio was approximately 0.59.

2) Debt Service Coverage Ratio: Northstar will not permit its debt service coverage ratio to be less than 1.75 to 1.00 as of the last day of any quarter. There is no debt service coverage ratio in effect at March 31, 2014 and the required debt service coverage ratio will be 1.40 and 1.50 at June 30, 2014, and September 30, 2014, respectively.

3) Minimum Net Worth of Borrower: Northstar will not permit its net worth on any date to be less than \$60 million. At March 31, 2014, Northstar's net worth was approximately \$61.6 million.

The working capital loan includes certain restrictions as follows:

1) The proceeds of the working capital loan cannot be used to finance the payment of any construction expenses, payment of any dividends or distributions, finance inventory located in Canada having a cost basis in excess of \$1 million, or to finance inventory located in any province in Canada other than Manitoba.

2) Northstar cannot declare or pay any dividends or distributions (in cash, property or obligations) provided, however, that so long as no event of default has occurred and is continuing, Northstar is in compliance with all financial covenants, and after giving effect to such distribution, Northstar's liquidity is not less than \$3 million.

3) The restricted cash balance of \$5 million is primarily a debt service reserve and the remaining amount can only be used to pay swap liabilities, debt payments or margin calls.

Corporate

Our corporate segment generates investment returns and cash flow with a portfolio of small-capitalization value stocks publicly traded in Switzerland and in the U.S. and from the sale of oil and gas production from our wells in Colorado. The Swiss portfolio is partially financed with loans denominated in Swiss Franc to provide a natural hedge against fluctuation in the U.S. dollar-Swiss Franc exchange rate. Cash flow from the sale of the securities in the Swiss portfolio will be used to repay the Swiss debt as it becomes due.

Consolidated Cash and Securities

At March 31, 2014, we had unrestricted and available cash of \$36.9 million, and available-for-sale debt and equity securities of \$16 million, which could be used for general corporate purposes, or used to finance new or existing projects in any of our segments.

We estimate that we have sufficient cash and available-for-sale investments to cover our cash needs for at least the next 12 months. In the long-term, we estimate that existing cash resources and cash from operations will provide us with adequate funding for future operations. However, if additional funding is needed, we could defer significant expenditures, sell assets, and raise cash from debt or equity offerings. Any additional equity offerings may be dilutive to our stockholders and any additional debt offerings may include operating covenants that could restrict our business.

Cash Flow

Our cash flows from operating, investing, and financing activities of continuing operations for the three months ended March 31, 2014 and 2013 were as follows (in thousands):

	2014	2013
Operating activities	\$(41,382)	\$(46,865)
Investing activities	(1,912)	2,896
Financing activities	(2,186)	5,681

Edgar Filing: PICO HOLDINGS INC /NEW - Form 10-Q

Effect of exchange rates on cash	(151) 541
Decrease in cash and cash equivalents	\$(45,631) \$(37,747)

33

Cash Flows From Operating Activities

Our operating activities from continuing operations used \$41.4 million in cash during the first three months of 2014. The principal operating cash outflows were \$35.2 million in purchases of canola seed and \$54.3 million used to acquire and develop real estate and residential lots and housing. Other operating cash outflows include \$13.9 million in overhead and various project expenses. Our positive cash inflows were \$25.3 million in sales of residential real estate and lots, \$31.6 million from sales of canola oil and meal

Our operating activities from continuing operations used \$46.9 million in cash in the first three months of 2013. The principal operating cash outflows were \$43.9 million in purchases of canola seed and \$22.4 million used to acquire and develop residential lots and housing. Other operating cash outflows include \$19.3 million in overhead and various project expenses and payments of accounts payable of \$6.8 million. Our positive cash inflows were \$11.3 million in sales of residential real estate and lots and \$36.6 million from sales of canola oil and meal.

Cash Flows From Investing Activities

Our investing activities from continuing operations used \$1.9 million of cash in the first three months of 2014. The primary sources of cash were \$4.3 million from the sale of debt and equity securities, offset by \$2.9 million in cash used to purchase additional debt and equity securities.

Our investing activities from continuing operations provided \$2.9 million of cash in the first three months of 2013. The primary positive sources of cash were \$6.8 million from the sale of debt and equity securities, and we also received \$1.9 million of cash from the release of restricted deposits used for our derivatives trading. We used \$5.5 million in cash to invest in additional debt and equity securities.

Cash Flows From Financing Activities

Financing activities from our continuing operations used \$2.2 million of cash during the first three months of 2014, primarily due to repayment of \$19.6 million of our debt including \$3.4 million of our Swiss debt, \$1.5 million paid on our senior secured loan facility, \$6.5 million on our working capital line of credit, and \$8.2 million of mortgage debt repaid when certain real estate properties were sold. These cash outflows were offset by cash proceeds of \$18.2 million from our debt arrangements, including \$6.5 million drawn on our working capital line of credit to fund purchases of canola seed and operating expenses in our agribusiness segment, and \$11.7 million in debt used to fund the acquisition and development of our real estate projects.

Financing activities from our continuing operations provided \$5.7 million of cash in the first three months of 2013. We received cash proceeds of \$9.5 million from our debt arrangements, including a net \$3 million drawn on our working capital line of credit in our agribusiness operations that was used to purchase canola seed and to fund operating expenses, and \$6.5 million in debt used to fund the acquisition and development of our real estate projects. We repaid \$3.8 million of our debt, including \$1.5 million of principal paid on our senior secured construction loan facility and \$2.3 million repaid when certain real estate properties were sold.

Our debt consists primarily of the \$82 million non-recourse senior secured construction loan facility, \$34.5 million in mortgage notes on real estate and real estate development, substantially all of which are non-recourse, and our Swiss debt of \$14.1 million. Although we cannot accurately predict the effect of inflation on our operations, we do not believe that inflation has had a material impact on our net revenues or results of operations, or is likely to in the foreseeable future.

Seasonality

Historically, the homebuilding industry experiences seasonal fluctuations in quarterly operating results and capital requirements. We typically experience the highest new home order activity in spring and summer, although this activity is also highly dependent on the number of active selling communities, timing of new community openings and other market factors. As it typically takes four to six months to construct a new home, we generally deliver more homes in the second half of the year as spring and summer home orders convert to home deliveries. Due to this seasonality, home starts, construction costs and related cash outflows have historically been highest in the second and third quarters, and the majority of cash receipts from home deliveries occur during the second half of the year. We expect this seasonal pattern to continue over the long term, although it may be affected by volatility in the homebuilding industry. We currently expect the traditional seasonality cycle and its impact on our results to become more prominent if and as the present housing recovery progresses and the housing markets and homebuilding industry return to a more normal operating environment.

Off-Balance Sheet Arrangements

As of March 31, 2014, we had no off-balance sheet arrangements that have, or are reasonably likely to have, a material current or future effect on our consolidated financial condition, revenues or expenses, results of operations, liquidity, capital expenditure, or capital resources.

Item 3. Quantitative and Qualitative Disclosure about Market Risk

Our balance sheet includes a significant amount of assets and liabilities whose fair value is subject to market risk. Market risk is the risk of loss arising from adverse changes in market interest rates or prices. We currently have interest rate risk as it relates to debt securities, equity price risk as it relates to marketable equity securities, and foreign currency risk as it relates to investments denominated in foreign currencies. The estimated fair value of the Company's debt is based on cash flow models discounted at the then-current interest rates and an estimate of the then-current spread above those rates at which the Company could borrow, which are level 3 inputs in the fair value hierarchy.

At March 31, 2014, we had \$9.4 million of debt securities, \$235,000 of which were denominated in foreign currencies (primarily New Zealand dollars), and \$40.7 million of marketable equity securities, \$22.6 million of which were denominated in foreign currencies, primarily Swiss Francs, that were subject to market risk. At December 31, 2013, we had \$9.2 million of debt securities, \$225,000 of which were denominated in foreign currencies, (primarily New Zealand dollars), and \$41.4 million of marketable equity securities, \$23.1 million of which were denominated in foreign currencies, primarily Swiss Francs, that were subject to market risk.

Our debt securities principally consist of bonds with short and medium terms to maturity. From time to time, we buy investment-grade bonds with short and medium term maturities to earn a higher return on liquid funds than is available from money market funds. We manage the interest risk by matching the maturity of the securities to budgeted cash requirements. The deferred compensation accounts hold both investment-grade and below investment-grade bonds. In the deferred compensation accounts, we manage interest rate risk by matching the maturities of the bonds to the participant's pre-selected payout schedule.

We use two models to report the sensitivity of our assets and liabilities subject to the above risks. For debt securities, we use duration modeling to calculate changes in fair value. The model calculates the price of a fixed maturity assuming a theoretical 100 basis point, or a 1% increase in interest rates and compares that to the current price of the security. At March 31, 2014, and 2013, the model calculated a loss in fair value of \$196,000, and \$109,000, respectively. For our marketable equity securities, we use a hypothetical 20% decrease in fair value to analyze the sensitivity. For equity securities denominated in foreign currencies, we use a hypothetical 20% decrease in the local currency of that investment. The hypothetical 20% decrease in fair value of our marketable equity securities would produce a loss in fair value at March 31, 2014 and 2013 of \$8.1 million and \$7.9 million, respectively that would reduce the unrealized appreciation in shareholders' equity. The hypothetical 20% decrease in the local currency of our foreign currency-denominated investments would produce a loss at March 31, 2014 and 2013 of \$1.7 million and \$1.1 million, respectively that would impact the foreign currency translation in shareholders' equity.

Actual results may differ from the hypothetical results assumed in this disclosure due to possible actions we may take to mitigate adverse changes in fair value, and because the fair value of securities may be affected by both factors related to the individual securities (e.g. credit concerns about a bond issuer) and general market conditions.

Item 4: Controls and Procedures

Evaluation of Disclosure Controls and Procedures

Under the supervision of and with the participation of our management, including our principal executive officer and principal financial officer, we evaluated the effectiveness of our disclosure controls and procedures, as such term is defined under Rules 13a-15(e) and 15(d) - 15(e) promulgated under the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Based on this evaluation, our principal executive officer and principal financial officer concluded that our disclosure controls and procedures were effective as of the end of the period covered by this quarterly report on Form 10-Q.

Changes in Internal Control Over Financial Reporting

There were no changes in our internal control over financial reporting (as defined in Rule 13a-15(f) under the Exchange Act) during the quarter ended March 31, 2014, that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Part II: Other Information

Item 1: Legal Proceedings

See Note 8 in Notes to Condensed Consolidated Financial Statements for a discussion of material updates to previously reported legal proceedings, which information is incorporated by reference into this Item 1.

Item 1A: Risk Factors

The following information sets out factors that could cause our actual results to differ materially from those contained in forward-looking statements we have made in this Quarterly Report on Form 10-Q and those we may make from time to time. You should carefully consider the following risks, together with other matters described in this Form 10-Q or incorporated herein by reference in evaluating our business and prospects. If any of the following risks occurs, our business, financial condition or operating results could be harmed. In such case, the trading price of our securities could decline, in some cases significantly.

The risk factors in this report have been revised to incorporate changes to our risk factors from those included in our Annual Report on Form 10-K for the year ended December 31, 2013. The risk factors set forth below with an asterisk (*) next to the title are new risk factors or risk factors containing changes, including any material changes, from the risk factors previously disclosed in Item 1A of our Annual Report on Form 10-K for the year ended December 31, 2013, as filed with the SEC.

General economic conditions could have a material adverse effect on our financial results, financial condition and our ability to grow our businesses.

All of our businesses are sensitive to general economic conditions, both nationally and locally, as well as international economic conditions. General poor economic conditions and the resulting effect of non-existent or slow rates of growth in the markets in which we operate could have a material adverse effect on the demand for both our real estate and water assets and the canola oil and meal products from our canola seed crushing business. These poor economic conditions include higher unemployment, inflation, deflation, increased commodity costs, decreases in consumer demand, changes in buying patterns, a weakened dollar, higher transportation and fuel costs, higher consumer debt levels, higher tax rates and other changes in tax laws or other economic factors that may affect commercial and residential real estate development and consumer demand for vegetable oil and meal products.

Specifically, high national or regional unemployment may arrest or delay any significant recovery of the residential real estate markets in which we operate, which could adversely affect the demand for our real estate and water assets. Any prolonged lack of demand for our real estate and water assets could have a significant adverse effect on our revenues, results of operations, and cash flows. Poor economic conditions could also lead to a decrease in consumer demand for canola oil products and/or a decline in canola seed crushing margins which could have a material adverse effect on our future cash flows, results of operations and financial condition.

Our future revenue is uncertain and depends on a number of factors that may make our revenue, profitability and cash flows volatile.

Our future revenue and profitability related to our water resource and water storage operations will primarily be dependent on our ability to acquire, develop and sell or lease water assets. In light of the fact that our water resource and water storage operations represent a large percentage of our overall business at present, our long-term profitability will be affected by various factors, including the availability and timing of water resource acquisitions, regulatory approvals and permits associated with such acquisitions, transportation arrangements, and changing technology. We may also encounter unforeseen technical or other difficulties which could result in cost increases with respect to our water resource and water storage development projects. Moreover, our profitability is significantly affected by changes in the market price of water. Future sales and prices of water may fluctuate widely as demand is affected by climatic, economic, demographic and technological factors as well as the relative strength of the residential, commercial, financial, and industrial real estate markets. Additionally, to the extent that we possess junior or conditional water rights, during extreme climatic conditions, such as periods of low flow or drought, our water rights could be subordinated to superior water rights holders. The factors described above are not within our control.

Our future revenue and the growth of our land development and homebuilding activities depends, in part, upon our ability to successfully identify and acquire attractive land parcels for development of single-family homes at reasonable prices. Our ability to acquire land parcels for new single-family homes may be adversely affected by changes in the general availability of land parcels, the willingness of land sellers to sell land prices at reasonable prices, competition for available land parcels, availability of financing to acquire land parcels, zoning and other market conditions. If the supply of land parcels appropriate for development of single-family homes is limited because of these factors, or for any other reason, our ability to grow our land development and homebuilding business could be significantly limited, and our land development and homebuilding revenue and gross margin could remain static or decline.

Our canola seed crushing facility only commenced full scale operations in the third quarter of 2012 and therefore has, to date, a limited operating history. Our canola crushing plant's future revenue and ability to operate profitably and to generate positive cash flows is primarily dependent on future market prices and conditions for canola seed, canola oil and canola meal as well as operating at or near maximum crushing capacity.

The operation of a canola crushing plant involves many risks which include: poor operating margins due to high commodity prices for canola seed; not obtaining and maintaining adequate canola seed supplies; cost overruns in excess of budgeted operational costs; an inability to maintain the crushing facility at efficient operating levels sufficient to generate positive cash flows including, but not limited to, factors such as inadequate supplies of canola seed, logistical issues in transporting seed to the plant and delivering canola and meal to customers, and breakdowns in the plant itself that will require repairs; and not maintaining and managing product price-risk efficiently. Critically, we will need to sell the plant's products (canola oil and meal) at market prices that are sufficient to generate adequate cash flows to service the debt financing used to partly fund the construction of the facility and to provide working capital for our operations. Additionally, we must be able to sell the plant's products at prices that will allow us to generate an adequate and appropriate rate of return on our equity investment. Our canola crushing operations has a limited operating history as of December 31, 2013 and to date has not generated annual operating income or positive cash flows.

One or more of the above factors in one or more of our operating segments could impact our revenue and profitability, negatively affect our financial condition and cash flows, and cause our results of operations to be volatile.

A downturn in the recent improvement that the homebuilding and land development industry has experienced would materially adversely affect our business and results of operations.

The homebuilding industry experienced a significant and sustained downturn in recent years having been impacted by factors that include, but are not limited to, weak general economic and employment growth, a lack of consumer confidence, large supplies of resale and foreclosed homes, a significant number of homeowners whose outstanding principal balance on their mortgage loan exceeds the market value of their home and tight lending standards and practices for mortgage loans that limit consumers' ability to qualify for mortgage financing to purchase a home. These factors resulted in an industry-wide weakness in demand for new homes and caused a material adverse effect on the growth of the local economies and the homebuilding industry in the southwestern U.S. markets where our real estate and water assets are located, including the states of Nevada, Arizona, California, Colorado, and New Mexico. However, in 2012, we noted a significant improvement in the housing market which led to increased levels of real estate development activity. The continuation of the recent improvement in residential and commercial real estate development process and activity is essential for our ability to generate operating income in our water resource and water storage, and land development and homebuilding businesses. We are unable to predict whether and to what extent this recovery will continue or its timing. Any future slow-down in real estate and homebuilding activity could adversely impact various development projects within the markets in which our real estate and water assets are located and this could materially affect our ability to monetize these assets. Declines and weak conditions in the U.S. housing market have reduced our revenues and created losses in our water resource and water storage, and land development and homebuilding businesses in prior years and could do so in the future.

We may not be able to realize the anticipated value of our real estate and water assets in our projected time frame, if at all.

We expect that the current slow growth of the economy will continue to have an impact on real estate market fundamentals. Depending on how markets perform both in the short and long-term, the state of the economy, both nationally and locally in the markets where our assets are concentrated, could result in a decline in the value of our existing real estate and water assets, or result in our having to retain such assets for longer than we initially expected,

which would negatively impact our rate of return on our real estate and water assets, cause us to divest such assets for less than our intended return on investment, or cause us to incur further impairments on the book values of such assets to estimated fair value. Such events would adversely impact our financial condition, results of operations and cash flows.

The fair values of our real estate and water assets are linked to growth factors concerning the local markets in which our assets are concentrated and may be impacted by broader economic issues.

Both the demand and fair value of our real estate and water assets are significantly affected by the growth in population and the general state of the local economies, which are affected by factors such as the local level of employment and the availability of financing and interest rates, where (1) our real estate and water assets are located, primarily in Arizona and northern Nevada, but also in Colorado and New Mexico and (2) our land development and homebuilding assets are located, primarily in California and to a lesser extent, Washington.

The unemployment rate in these states, as well as issues related to the credit markets, may prolong a slowdown of the local economies where our real estate and water assets are located. This could materially and adversely affect the demand for and the fair value of our real estate and water assets and, consequently, adversely affect our growth and revenues, results of operations, cash flows and the return on our investment in these assets.

The fair values of our real estate and water assets may decrease which could adversely affect our results of operations by impairments and write-downs.

The fair value of our water resource and water storage assets and our land and homebuilding assets depends on market conditions. We acquire water resources and land for expansion into new markets and for replacement of inventory and expansion within our current markets. The valuation of real estate and water assets is inherently subjective and based on the individual characteristics of each asset. Factors such as changes in regulatory requirements and applicable laws, political conditions, the condition of financial markets, local and national economic conditions, the financial condition of customers, potentially adverse tax consequences, and interest and inflation rate fluctuations subject valuations to uncertainties. In addition, our valuations are made on the basis of assumptions that may not prove to reflect economic or demographic reality. If population growth and, as a result, water and/or housing demand in our markets fails to meet our expectations when we acquired our real estate and water assets, our profitability may be adversely affected and we may not be able to recover our costs when we sell our real estate and water assets. We regularly review the value of our real estate and water assets. These reviews resulted in significant impairments to our water resource assets and /or land development assets. Such impairments have adversely affected our results of operations and our financial condition in those years.

If future market conditions adversely impact the anticipated timing of and amount of sales of our real estate and water assets we may be required to record further significant impairments to the carrying value of our real estate and water assets which would adversely affect our results of operations and our financial condition.

Our water resource and water storage operations are concentrated in a limited number of assets, making our growth and profitability vulnerable to conditions and fluctuations in a limited number of local economies.

In the future, we anticipate that a significant amount of our water resource and water storage segment revenue, results of operations and cash flows will come from a limited number of assets, which primarily consist of our water resources in Nevada and Arizona and our water storage operations in Arizona. Water resources in this region are scarce and we may not be successful in continuing to acquire and develop additional water assets. If we are unable to develop additional water assets, our revenues will be derived from a limited number of assets, primarily located in Arizona and Nevada. Our two most significant assets are our water storage operations in Arizona and our water resources to serve the northern valleys of Reno, Nevada. As a result of this concentration, our invested capital and results of operations will be vulnerable to the conditions and fluctuations in these local economies and potentially to changes in local government regulations.

Our Arizona Recharge Facility is one of the few private sector water storage sites in Arizona. To date, we have stored approximately 251,000 acre-feet at the facility for our own account. In addition, we have approximately 157,000 acre-feet of water stored in the Phoenix Active Management Area. We have not stored any water on behalf of any customers, and have not as yet generated any revenue from the recharge facility or from the water stored in the Phoenix Active Management Area. We believe that the best economic return on the assets arises from storing water when surplus water is available and selling this water in periods when water is in more limited supply. However, we cannot be certain that we will ultimately be able to sell the stored water at a price sufficient to provide an adequate economic profit, if at all.

We have constructed a pipeline approximately 35 miles long to deliver water from Fish Springs Ranch to the northern valleys of Reno, Nevada. As of March 31, 2014, the total cost of the pipeline project, including our water credits, (net of impairment charges incurred to date) carried on our balance sheet was approximately \$83.9 million. To date, we have sold only a small amount of the water credits and we cannot provide any assurance that the sales prices we may obtain in the future will provide an adequate economic return, if at all. Furthermore, we believe the principal buyers of this water are likely real estate developers who are contending with the effects of the current weak demand that exists for new homes and residential development in this area. Any prolonged weak demand for new homes and residential development, and, as a result, for our assets in Nevada and Arizona, would have a material adverse effect on our future revenues, results of operations and cash flows.

* The operation of our canola seed crushing facility may not generate sufficient cash flow to repay the debt that is secured on the facility.

Our canola crushing operations has a limited operating history and to date has not generated annual operating income or positive cash flows. As a result, the facility may be unable to fund principal and interest payments under its debt service obligations or may continue to operate at a loss. In certain situations, if the facility performs below certain operating levels leading to inadequate or negative cash flows, certain covenants in the agreements governing the facility's debt financing may be breached, rendering all of the facility's debt immediately due and payable. As a result, we may be forced to provide additional capital to our canola seed crushing operation to cure any breach of certain debt covenants which could lead to a material adverse effect on our financial condition and cash flows. As of March 31, 2014 we had invested an additional \$37.1 million to fund the operating losses to date of our canola seed crushing facility and to ensure certain debt covenants were not breached. If we are unable to cure any breach of certain debt covenants, our canola seed crushing plant may be foreclosed on by our debt providers and we may lose our entire investment in this operation which would lead to a material adverse effect on our financial condition, results of operations and cash flows.

We may not be able to procure sufficient quantities of canola seed to efficiently operate our proposed canola seed crushing facility due to adverse weather conditions and/or logistical constraints.

The supply and price of canola seed may be subject to extreme volatility due to adverse weather conditions and/or logistical constraints. If the supply of canola seed becomes limited due to significantly reduced harvests or transportation is unavailable to bring canola seed to our plant at desired times and acceptable prices, we may not be able to procure sufficient quantities of canola seed to achieve optimal crushing capacity at our facility. Significantly reduced crushing operations from our current capacity of approximately 1,200 tons per day would lead to significantly reduced revenue, and may result in further losses and negative cash flows from operations and may cause us to breach our debt covenants. As a result, our canola seed crushing plant may be foreclosed on by our debt providers and we may lose our entire investment in this operation which would lead to a material adverse effect on our financial condition, results of operations and cash flows.

We may not be able to successfully penetrate the canola oil and meal markets.

The canola processing business is highly competitive and other companies presently in the market, some of which are larger and have greater financial resources than we have, or companies that could enter the market, could adversely affect profit margins for the products we sell. In addition, prices for canola seed, canola oil and canola meal are often volatile and may be affected by factors beyond our control such as global inventory levels, farmer planting decisions, weather and canola crop conditions, demand for and supply of competing products for canola oil and meal and demand for biofuels. While we have agreements in place with an end user of both canola oil and meal for 100% of the products we produce from our facility, we compete with other canola seed processors who may be capable of producing significantly greater quantities of canola products than us, and who may achieve higher operating efficiencies and lower costs due to their scale as well as have greater financial resources than we have to endure any prolonged adverse conditions.

We may fail to implement an effective risk management program at our canola seed crushing facility.

Our canola seed crushing facility is exposed to many commodity and financial risks including canola seed, canola oil and canola meal prices, interest rates, foreign currency exchange rates and transportation and energy costs. To attempt to manage certain of these risks, we have implemented, and intend to continue entering into, various hedging transactions with respect to future canola crush margins and the interest rate on the debt financing used to construct the facility. However, our hedging transactions may not fully minimize our exposure to these risks and we may not

always be fully hedged.

In addition, a major component of our risk management program is the maintenance of a comprehensive insurance program. Our business interruption insurance or other insurance policies may not cover all losses arising from natural disasters or other events that would impair or terminate our ability to process canola seed into revenue generating products.

Climate change, or legal, regulatory, or market measures to address climate change, may negatively affect our business and operations.

Due to climate change, we may be subject to decreased availability or less favorable pricing for the canola seed we use to produce canola oil and meal. In addition, natural disasters and extreme weather conditions may disrupt the productivity of our facilities or the operation of our supply chain. The increasing concern over climate change also may result in more regional, federal, and/or global legal and regulatory requirements. In the event that such regulation is enacted, we may experience significant increases in our costs of operation and delivery.

40

In particular, increasing regulation of fuel emissions could substantially increase the distribution and supply chain costs associated with our products. As a result, climate change could negatively affect our business and operations.

We are a recent entrant to the homebuilding business and we will face significant competition in marketing and selling new homes.

We have entered the homebuilding business by constructing, marketing and selling single-family homes on certain of our finished residential lots that we own in California. We aim to build homes only in those markets where we have identified that a sufficient demand exists for new homes. However, the homebuilding industry is highly competitive and we will be competing with a number of national and local homebuilders in selling homes to satisfy expected demand. These competitors, especially the national homebuilders, have greater resources and experience in this industry than we have. Such competition could result in lower than anticipated sales volumes and/or profit margins that are below our expectations. In addition, we will have to compete with the resale of existing homes, including foreclosed homes, which could also negatively affect the number and price of homes we are able to sell and the time our homes remain on the market.

We use leverage to finance a portion of the cost to acquire our land development assets and to construct homes.

We currently use, and expect to continue to use, debt to finance a portion of the cost of constructing our homes and acquiring and developing our lots. Such indebtedness is primarily comprised of project-level secured acquisition, development and construction loans, with recourse limited to the securing collateral.

Incurring debt could subject us to many risks that, if realized, would adversely affect us, including the risk that:

- our cash flow from our land development and homebuilding operations may be insufficient to make required payments of principal of and interest on the debt which is likely to result in acceleration of the maturity of such debt;

- our debt may increase our vulnerability to adverse economic and industry conditions with no assurance that investment yields will increase with higher financing cost;

- we may be required to dedicate a portion of our cash flow from our land development and homebuilding operations to payments on our debt, thereby reducing funds available for the operations and capital expenditures; and

- the terms of any refinancing may not be as favorable as the terms of the debt being refinanced.

If we do not have sufficient funds to repay our debt at maturity, it may be necessary to refinance the debt through additional debt or additional equity financings which could dilute our interest in our land development and homebuilding business. If, at the time of any refinancing, prevailing interest rates or other factors result in higher interest rates on refinancing, increases in interest expense could adversely affect our cash flows and results of operations. If we are unable to refinance our debt on acceptable terms, we may be forced to dispose of our land development and housing assets on disadvantageous terms, potentially resulting in losses. To the extent we cannot meet any future debt service obligations, we will risk losing some or all of our assets that may be pledged to secure our obligations to foreclosure. Defaults under our debt agreements used to finance a portion of the cost of constructing homes and acquiring and developing lots could have a material adverse effect on our land development and homebuilding business, prospects, liquidity, financial condition and results of operations.

We may be subject to significant warranty, construction defect and liability claims in the ordinary course of our homebuilding business.

As a homebuilder, we may be subject to home warranty and construction defect claims arising in the ordinary course of business. We may also be subject to liability claims for injuries that occur in the course of construction activities. Due to the inherent uncertainties in such claims, we cannot provide assurance that our insurance coverage or our subcontractors' insurance and financial resources will be sufficient to meet any warranty, construction defect and liability claims we may receive in the future. If we are subject to claims beyond our insurance coverage, our profit from our homebuilding activities may be less than we expect and our financial condition may be adversely affected.

We will be relying on the performance of our subcontractors to build horizontal infrastructure and homes according to our budget, timetable and quality.

We rely on subcontractors to perform the actual construction of horizontal infrastructure (in the cases where we are completing the development of entitled lots to finished lots) and of the homes we are building on certain of our finished lots. In certain cases, we will also rely on the subcontractor to select and obtain raw materials. Our subcontractors may fail to meet either our quality control or be unable to build and complete the horizontal infrastructure or homes in the expected timetable due to subcontractor related issues such as being unable to obtain sufficient materials or skilled labor, or due to external factors such as delays arising from severe weather conditions.

Any such failure by our subcontractors could lead to increases in construction costs and construction delays. Such increases could negatively impact the price and number of finished lots and homes we are able to sell.

Compliance with federal, state and local regulations related to our real estate operations may result in substantial delays and costs.

Our real estate operations are subject to numerous laws and regulations that affect the land development and homebuilding process, including laws and regulations related to zoning, permitted land uses, levels of density, building design, water and waste disposal and use of open spaces. We also are subject to a variety of federal, state and local laws and regulations concerning the protection of the environment. We are typically required to obtain permits, entitlements and approvals from local authorities to start and carry out residential development or home construction. Such permits, entitlements and approvals may, from time-to-time, be opposed or challenged by local governments or other interested parties, adding delays, costs and risks of non-approval to the process. Our obligation to comply with the laws and regulations under which we operate, and our need to ensure that our subcontractors and other agents comply with these laws and regulations may result in delays in construction and land development and may also cause us to incur substantial additional and unbudgeted costs.

Our homebuilding operations may be adversely impacted by the availability of and the demand for mortgage financing, and any changes to the tax benefits associated with owning a home.

To successfully market and sell the homes we construct depends on the ability of home buyers to obtain mortgage financing for the purchase of these new homes. Current credit requirements for mortgage financing are significantly greater than in the past which makes it more difficult for a potential home buyer to obtain mortgage financing. In addition, any significant increase in interest rates from current rates may also lead to increased mortgage finance costs leading to a decline in demand and availability of mortgage financing. Any decline in the availability of mortgage financing may lead to a reduced demand for the homes we have already constructed, or intend to construct. Furthermore, the demand for homes in general, and the homes we intend to construct, may be affected by changes in federal and state income tax laws. Current federal, and many state, tax laws allow the deduction of, among other homeowner expenses, mortgage interest and property taxes against an individual's taxable income. Any changes to the current tax laws which reduce or eliminate these deductions, or reduce or eliminate the exclusion of taxable gain from the sale of a principal residence, would likely lead to a greatly reduced demand for homes. This would lead to a materially adverse impact on the homebuilding business in general and our revenues, cash flows and financial condition specifically.

We may suffer uninsured losses or suffer material losses in excess of insurance limits.

We could suffer physical damage to any of our assets at one or more of our different businesses and liabilities resulting in losses that may not be fully recoverable by insurance. In addition, certain types of risks, such as personal injury claims, may be, or may become in the future, either uninsurable or not economically insurable, or may not be

currently or in the future covered by our insurance policies or otherwise be subject to significant deductibles or limits. Should an uninsured loss or a loss in excess of insured limits occur or be subject to deductibles, we could sustain financial loss or lose capital invested in the affected asset(s) as well as anticipated future income from that asset. In addition, we could be liable to repair damage or meet liabilities caused by risks that are uninsured or subject to deductibles.

We may not receive all of the permitted water rights we expect from the water rights applications we have filed in Nevada and New Mexico.

We have filed certain water rights applications in Nevada and New Mexico. In Nevada this is primarily as part of the water teaming agreement with Lincoln County. We deploy the capital required to enable the filed applications to be converted into permitted water rights over time as and when we deem appropriate or as otherwise required.

We only expend capital in those areas where our initial investigations lead us to believe that we can obtain a sufficient volume of water to provide an adequate economic return on the capital employed in the project. These capital expenditures largely consist of drilling and engineering costs for water production, costs of monitoring wells, and legal and consulting costs for hearings with the State Engineer, and National Environmental Protection Act, or “NEPA”, compliance costs. Until the State Engineer permits the water rights, we cannot provide any assurance that we will be awarded all of the water that we expect based on the results of our drilling and our legal position and it may be a considerable period of time before we are able to ascertain the final volume of water rights that will be permitted by the State Engineers. Any significant reduction in the volume of water awarded to us from our original base expectation of the amount of water that may be permitted could adversely affect our revenues, results of operations, and cash flows.

Variances in physical availability of water, along with environmental and legal restrictions and legal impediments, could impact profitability.

We value our water assets, in part, based upon the volume (as measured in acre-feet) of water we anticipate from water rights applications and our permitted water rights. The water and water rights held by us and the transferability of these rights to other uses, persons, and places of use are governed by the laws concerning water rights in the states of Arizona, Colorado, Idaho, Nevada, and New Mexico. The volumes of water actually derived from the water rights applications or permitted rights may vary considerably based upon physical availability and may be further limited by applicable legal restrictions.

As a result, the volume of water anticipated from the water rights applications or permitted rights may not in every case represent a reliable, firm annual yield of water, but in some cases describe the face amount of the water right claims or management’s best estimate of such entitlement. Additionally, we may face legal restrictions on the sale or transfer of some of our water assets, which may affect their commercial value. If we are unable to transfer or sell our water assets, we may lose some or all of our anticipated returns, which may adversely affect our revenues, profitability and cash flows.

Purchasers of our real estate and water assets may default on their obligations to us and adversely affect our results of operations and cash flow.

In certain circumstances, we finance sales of real estate and water assets, and we secure such financing through deeds of trust on the property, which are only released once the financing has been fully paid off. Purchasers of our real estate and water assets may default on their financing obligations. Such defaults may have an adverse effect on our business, financial condition, and the results of operations and cash flows.

Our sale of water assets may be subject to environmental regulations which would impact our revenues, profitability, and cash flows.

The quality of the water assets we lease or sell may be subject to regulation by the United States Environmental Protection Agency acting pursuant to the United States Safe Drinking Water Act. While environmental regulations do not directly affect us, the regulations regarding the quality of water distributed affects our intended customers and may, therefore, depending on the quality of our water, impact the price and terms upon which we may in the future sell our water assets. If we need to reduce the price of our water assets in order to make a sale to our intended customers, our balance sheet, results of operations and financial condition could suffer.

Our water asset sales may meet with political opposition in certain locations, thereby limiting our growth in these areas.

The water assets we hold and the transferability of these assets and rights to other uses, persons, or places of use are governed by the laws concerning water rights in the states of Arizona, California, Nevada, Colorado and New Mexico. Our sale of water assets is subject to the risks of delay associated with receiving all necessary regulatory approvals and permits. Additionally, the transfer of water resources from one use to another may affect the economic base or impact other issues of a community including development, and will, in some instances, be met with local opposition including Native American tribes. Moreover, municipalities who will likely regulate the use of any water we might sell to them in order to manage growth, could create additional requirements that we must satisfy to sell and convey water assets.

If we are unable to effectively transfer, sell and convey water resources, our ability to monetize these assets will suffer and our revenues and financial condition would decline.

If we do not successfully identify, select and manage acquisitions and investments, or if our acquisitions or investments otherwise fail or decline in value, our financial condition could suffer.

We acquire and invest in businesses and assets that we believe are undervalued or that will benefit from additional capital, restructuring of operations, strategic initiatives, or improved competitiveness through operational efficiencies. If an acquired business, investment or asset fails or its fair value declines, we could experience a material adverse effect on our business, financial condition, the results of operations and cash flows. Additionally, we may not be able to find sufficient opportunities to make our business strategy successful. If we fail to successfully identify, select and manage acquisition and investment opportunities, our business, financial condition, results of operations and cash flows could be materially affected. Such business failures, declines in fair values, and/or failure to successfully identify, select and manage acquisitions or investments, could result in a negative return on equity. We could also lose part or all of our capital in these businesses and experience reductions in our net income, cash flows, assets and equity.

Future acquisitions and dispositions of our businesses, assets, operations and investments are possible, and, if unsuccessful, could reduce the value of our common shares. Any future acquisitions or dispositions may result in significant changes in the composition of our assets and liabilities. Consequently, our financial condition, results of operations and the trading price of our common shares may be affected by factors different from those affecting our financial condition, results of operations and trading price at the present time.

Failure to successfully manage newly acquired companies could adversely affect our business.

Our management of the operations of acquired businesses requires significant efforts, including the coordination of personnel, information technologies, research and development, sales and marketing, operations, taxation, regulatory matters, and finance. These efforts result in additional expenses and involve significant amounts of our management's time and could distract our management from the day-to-day operations of our business. The diversion of our management's attention from the day-to-day operations, or difficulties encountered in the integration process, could have a material adverse effect on our business, financial condition, and the results of operations and cash flows. If we fail to integrate acquired businesses, personnel, resources, or assets into our operations successfully, we may be unable to achieve our strategic goals or an economic return and the value of your investment could suffer.

We operate in a variety of industries and market sectors, all of which are very competitive and susceptible to economic downturns and would be adversely affected by a recession. We also look for opportunities in industries and market sectors in which we do not have any operating history. For example, in 2010, we completed a business combination for a canola seed crushing operation, an agribusiness in which we had no previous operating experience. A worsening of general economic or market conditions may require us to devote more of our management resources to newly acquired companies and may result in lower valuations for our businesses or investments or have a negative impact on the credit quality of our assets.

Our acquisitions may result in dilution to our shareholders and increase our exposure to additional liabilities.

We make selective acquisitions of companies that we believe could benefit from our resources of additional capital, business expertise, management direction and oversight, or existing operations. We endeavor to enhance and realize additional value to these acquired companies through our influence and control. Any acquisition could result in the use of a significant portion of our available cash, significant dilution to you, and significant acquisition-related charges. Acquisitions may also result in the assumption of liabilities, including liabilities that are unknown or not fully known to us at the time of the acquisition, which could have a material adverse financial effect on us. Moreover, we may need to incur debt obligations, in order to finance new acquisitions. Additionally, our acquisitions and investments may yield low or negative returns for an extended period of time, which could temporarily or permanently depress our return on shareholders' equity, and we may not realize the value of the funds invested.

We generally make acquisitions and investments that tend to be long term in nature, and for the purpose of realizing additional value by means of appropriate levels of influence and control. We acquire businesses that we believe to be undervalued or may benefit from additional capital, restructuring of operations or management or improved competitiveness through operational efficiencies with our existing operations or through appropriate and strategic management input. We may not be able to develop acceptable revenue streams and investment returns through the businesses we acquire, and as a result we may lose part or all of our investment in these assets.

Additionally, when any of our acquisitions do not achieve acceptable rates of return or we do not realize the value of the funds invested, we may write down the value of such acquisitions or sell the acquired businesses at a loss. Some of our prior acquisitions have lost either part or all of the capital we invested.

Unsuccessful acquisitions could have negative impacts on our cash flows, income, assets and shareholders' equity, which may be temporary or permanent. Moreover, the process we employ to enhance value in our acquisitions and investments can consume considerable amounts of time and resources. Consequently, costs incurred as a result of these acquisitions and investments may exceed their revenues and/or increases in their values, if any, for an extended period of time.

Our ability to achieve an acceptable rate of return on any particular investment is subject to a number of factors which may be beyond our control, including increased competition and loss of market share, the ability of management to implement their strategic and operational directives, cyclical or uneven financial results, technological obsolescence, foreign currency risks and regulatory delays.

We may need additional capital in the future to fund the growth of our business and acquisitions, and financing may not be available on favorable terms, if at all, or without dilution to our shareholders.

We currently anticipate that our available capital resources and operating cash flows will be sufficient to meet our expected working capital and capital expenditure requirements for at least the next 12 months. However, we cannot provide any assurance that such resources will be sufficient to fund the long-term growth of our business and acquisitions. We may raise additional funds through public or private debt, equity or hybrid securities financings, including, without limitation, through the issuance of securities.

We may experience difficulty in raising necessary capital in view of the recent volatility in the capital markets and increases in the cost of finance. Increasingly stringent rating standards could make it more difficult for us to obtain financing. If we raise additional funds through the issuance of equity or convertible debt securities, the percentage ownership of our shareholders could be significantly diluted, and these newly issued securities may have rights, preferences or privileges senior to those of existing shareholders. Indebtedness would result in increased debt service obligations and could result in operating and financing covenants that would restrict our operations. The additional financing we may need may not be available to us, or on favorable terms. If adequate funds are not available or are not available on acceptable terms, if and when needed, our ability to fund our operations, take advantage of unanticipated opportunities, respond to competitive pressures or otherwise execute our strategic plan would be significantly limited. In any such case, our business, operating results or financial condition could be materially adversely affected.

* Our ability to utilize net operating loss carryforwards and certain other tax attributes may be limited.

Under Section 382 of the Internal Revenue Code of 1986, as amended, if our company undergoes an "ownership change" (generally defined as a greater than 50% change (by value) in our equity ownership over a three year period), the ability to use our pre-change net operating loss carryforwards and other pre-change tax attributes to offset our post-change income may be limited. We may experience ownership changes in the future as a result of shifts in our stock ownership. As of March 31, 2014, we had federal and state net operating loss carryforwards of approximately \$105.1 million and \$118.2 million, respectively, which, depending on our value at the time of any ownership changes, could be limited.

Our acquisitions of and investments in non-U.S. companies subject us to additional market, liquidity, tax and foreign exchange risks which could affect the value of our stock.

We have acquired, and may continue to acquire, businesses and securities in non-U.S. public companies and other assets or businesses not located in the U.S. Typically, these non-U.S. securities are not registered with the SEC and regulation of these companies is under the jurisdiction of the relevant non-U.S. country. The respective non-U.S. regulatory regime may limit our ability to obtain timely and comprehensive financial information for the non-U.S. companies in which we have invested. In addition, if a non-U.S. company in which we invest were to take actions

which could be deleterious to its shareholders, non-U.S. legal systems may make it difficult or time-consuming for us to challenge such actions. These factors may affect our ability to acquire controlling stakes, or to dispose of our non-U.S. investments, or to realize the full fair value of our non-U.S. investments. In addition, investments in non-U.S. countries may give rise to complex cross-border tax issues. We aim to manage our tax affairs efficiently, but given the complexity of dealing with U.S. and non-U.S. tax jurisdictions, we may have to pay tax in both the U.S. and in non-U.S. countries, and we may be unable to offset any U.S. tax liabilities with non-U.S. tax credits. If we are unable to manage our non-U.S. tax issues efficiently, our financial condition and the results of operations and cash flows could be adversely affected. In addition, our base currency is United States dollars. Accordingly, we are subject to foreign exchange risk through our acquisitions of stocks in non-U.S. public companies.

We attempt to mitigate a portion of this foreign exchange risk by borrowing funds in the same currency to purchase the equities. Significant fluctuations in the non-U.S. currencies in which we hold investments or consummate transactions could negatively impact our financial condition and the results of operations and cash flows.

We also may be unable to effectively and efficiently repatriate funds into the U.S. upon monetization of assets, securities, or businesses not located in the U.S., which could have an impact on our liquidity.

We may not be able to retain key management personnel we need to succeed, which could adversely affect our ability to successfully operate our businesses.

To run our day-to-day operations and to successfully manage newly acquired companies we must, among other things, continue to attract and retain key management. We rely on the services of a small team of key executive officers. If they depart, it could have a significant adverse effect upon our business. Mr. Hart, our CEO, is key to the implementation of our strategic focus, and our ability to successfully develop our current strategy is dependent upon our ability to retain his services. Also, increased competition for skilled management and staff employees in our businesses could cause us to experience significant increases in operating costs and reduced profitability.

Because our operations are diverse, analysts and investors may not be able to evaluate us adequately, which may negatively influence the price of our stock.

We are a diversified holding company with significant operations in a variety of business segments. Each of these areas is unique, complex in nature, and difficult to understand. In particular, the water resource business is a developing industry in the United States with very little historical and comparable data, very complex valuation issues and a limited following of analysts. Because we are complex, analysts and investors may not be able to adequately evaluate our operations and enterprise as a going concern. This could cause analysts and investors to make inaccurate evaluations of our stock, or to overlook PICO in general. As a result, the trading volume and price of our stock could suffer and may be subject to excessive volatility.

Fluctuations in the market price of our common stock may affect your ability to sell your shares.

The trading price of our common stock has historically been, and we expect will continue to be, subject to fluctuations. The market price of our common stock may be significantly impacted by:

- quarterly variations in financial performance and condition;
- shortfalls in revenue or earnings from estimates forecast by securities analysts or others;
- changes in estimates by such analysts;
- product introductions;
- the availability of economically viable acquisition or investment opportunities, including water resources and real estate, which will return an adequate economic return;
- our competitors' announcements of extraordinary events such as acquisitions;
- litigation; and
- general economic conditions and other matters described herein.

Our results of operations have been subject to significant fluctuations, particularly on a quarterly basis, and our future results of operations could fluctuate significantly from quarter to quarter and from year to year. Causes of such fluctuations may include the inclusion or exclusion of operating earnings from newly acquired or sold operations, one

time transactions, and impairment losses. Statements or changes in opinions, ratings, or earnings estimates made by brokerage firms or industry analysts relating to the markets in which we do business or relating to us specifically could result in an immediate and adverse effect on the market price of our common stock. Such fluctuations in the market price of our common stock could affect the value of your investment and your ability to sell your shares. In addition, some investors favor companies that pay dividends, particularly in market downturns. We have never declared or paid any cash dividends on our common stock. We currently intend to retain any future earnings for funding growth and, therefore, we do not currently anticipate paying cash dividends on our common stock.

Litigation may harm our business or otherwise distract our management.

Substantial, complex or extended litigation could cause us to incur large expenditures and distract our management. For example, lawsuits by employees, shareholders or customers could be very costly and substantially disrupt our business. Additionally, from time to time we or our subsidiaries will have disputes with companies or individuals which may result in litigation that could necessitate our management's attention and require us to expend our resources. We may be unable to accurately assess our level of exposure to specific litigation and we cannot provide any assurance that we will always be able to resolve such disputes out of court or on terms favorable to us. We may be forced to resolve litigation in a manner not favorable to us, and such resolution could have a material adverse impact on our consolidated financial condition or results of operations.

Our governing documents could prevent an acquisition of our company or limit the price that investors might be willing to pay for our common stock.

Certain provisions of our articles of incorporation and the California General Corporation Law could discourage a third party from acquiring, or make it more difficult for a third party to acquire, control of our company without approval of our board of directors. For example, our bylaws require advance notice for stockholder proposals and nominations for election to our board of directors. We are also subject to the provisions of Section 1203 of the California General Corporation Law, which requires a fairness opinion to be provided to our shareholders in connection with their consideration of any proposed "interested party" reorganization transaction. All or any of these factors could limit the price that certain investors might be willing to pay in the future for shares of our common stock.

If equity analysts do not publish research or reports about our business or if they issue unfavorable commentary or downgrade our common stock, the price of our common stock could decline.

The trading market for our common stock will rely in part on the research and reports that equity research analysts publish about us and our business. We do not control these analysts. The price of our stock could decline if one or more equity analysts downgrade our stock or if those analysts issue other unfavorable commentary or cease publishing reports about us or our business.

Our business could be negatively impacted by cybersecurity threats.

In the ordinary course of our business, we use our data centers and our networks to store and access our proprietary business information. We face various cybersecurity threats, including cybersecurity attacks to our information technology infrastructure and attempts by others to gain access to our proprietary or sensitive information. The procedures and controls we use to monitor these threats and mitigate our exposure may not be sufficient to prevent cybersecurity incidents. The result of these incidents could include disrupted operations, lost opportunities, misstated financial data, liability for stolen assets or information, increased costs arising from the implementation of additional security protective measures, litigation and reputational damage. Any remedial costs or other liabilities related to cybersecurity incidents may not be fully insured or indemnified by other means.

THE FOREGOING FACTORS, INDIVIDUALLY OR IN AGGREGATE, COULD MATERIALLY ADVERSELY AFFECT OUR OPERATING RESULTS AND CASH FLOWS AND FINANCIAL CONDITION AND COULD MAKE COMPARISON OF HISTORIC FINANCIAL STATEMENTS, INCLUDING RESULTS OF OPERATIONS AND CASH FLOWS AND BALANCES, DIFFICULT OR NOT MEANINGFUL.
