

ENTREE GOLD INC  
Form 6-K  
January 17, 2008  
UNITED STATES

**SECURITIES AND EXCHANGE COMMISSION**

**Washington, D.C. 20549**

**Form 6-K**

**REPORT OF FOREIGN PRIVATE ISSUER PURSUANT TO RULE 13a-16 OR 15d-16 UNDER THE SECURITIES EXCHANGE ACT OF 1934**

For the month of January, 2008

Commission File Number 001-32570

Entrée Gold Inc.

(Translation of registrant's name into English)

Suite 1201 - 1166 Alberni Street, Vancouver, BC V6E 3Z3

(Address of principal executive office)

Indicate by check mark whether the registrant files or will file annual reports under cover Form 20-F or Form 40-F.

Form 20-F      Form 40-F

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(1):

**Note:** Regulation S-T Rule 101(b)(1) only permits the submission in paper of a Form 6-K if submitted solely to provide an attached annual report to security holders.

Indicate by check mark if the registrant is submitting the Form 6-K in paper as permitted by Regulation S-T Rule 101(b)(7):

**Note:** Regulation S-T Rule 101(b)(7) only permits the submission in paper of a Form 6-K if submitted to furnish a report or other document that the registrant foreign private issuer must furnish and make public under the laws of the jurisdiction in which the registrant is incorporated, domiciled or legally organized (the registrant's home country), or under the rules of the home country exchange on which the registrant's securities are traded, as long as the report or other document is not a press release, is not required to be and has not been distributed to the registrant's security holders, and, if discussing a material event, has already been the subject of a Form 6-K submission or other Commission filing on EDGAR.

Indicate by check mark whether the registrant by furnishing the information contained in this Form is also thereby furnishing the information to the Commission pursuant to Rule 12g3-2(b) under the Securities Exchange Act of 1934.

Yes      No

If "Yes" is marked, indicate below the file number assigned to the registrant in connection with Rule 12g3-2(b): 82-\_\_\_\_\_.

**Material Change Report**

**Item 1. Name and Address of Company**

Entrée Gold Inc. (the Company )

Suite 1201 - 1166 Alberni Street

Vancouver, BC V6E 3Z3

**Item 2. Date of Material Change**

January 16, 2008

**Item 3. News Release**

The News Release dated January 16, 2008 was disseminated via Marketwire Canadian and U.S. Timely Disclosure.

**Item 4. Summary of Material Change**

The Company announced additional drilling results from the Heruga Deposit in southern Mongolia and the appointment of Mona M Forster to the position of Vice President and Corporate Secretary.

**Item 5. Full Description of Material Change**

**5.1 Full Description of Material Change**

For a full description of the material change, see Schedule A .

Thirty-two drill holes (including daughter holes) on nine sections spaced at 150 to 300 metre intervals along a 1,600 metre strike length of the Heruga discovery have now been completed. Significant copper, gold and molybdenum mineralization has been intersected in new drill holes on six of these sections. Five drills are currently active on the Heruga Deposit.

Over 34,000 metres have been drilled to date on Heruga. The results of this work have provided Entrée and Ivanhoe with substantial information about the structure and controls of the mineralization. Recent drilling has outlined a coherent block of copper-gold-molybdenum mineralization extending for approximately 1,600 metres north-south, with a vertical thickness typically varying between 400 to 800 metres, and a width of 200 to 300 metres. The mineralization is deep, with the shallowest portion on most sections starting at between 500 and 600 metres vertical depth. Selected drilling results were provided in a table and are available on the company website.

**5.2 Disclosure for Restructuring Transactions**

Not Applicable.

**Item 6. Reliance on subsection 7.1(2) or (3) of National Instrument 51-102**

Not Applicable.

**Item 7. Omitted Information**

Not Applicable.

**Item 8. Executive Officer**

The following Senior Officer of the Company is available to answer questions regarding this report:

Greg Crowe, President & CEO

604.687.4777

**Item 9. Date of Report**

Dated at Vancouver, BC, this 16<sup>th</sup> day of January, 2008.

SCHEDULE A

**DRILLING EXPANDS ENTRÉE GOLD'S**

**HERUGA MINERALIZATION, MONGOLIA**

**Vancouver, B.C., January 16, 2008** - Entrée Gold Inc. (TSX:ETG; AMEX:EGI; Frankfurt:EKA Entrée or the Company ) announces additional significant results on the Heruga Deposit located within its Javhlant license, Mongolia, from partner and project operator, Ivanhoe Mines Ltd. (TSX: IVN; NYSE: IVN; NASDAQ: IVN Ivanhoe Mines ). The Javhlant license, located to the south of the Oyu Tolgoi deposit, is included in the joint Entrée-Ivanhoe Mines agreement area.

Thirty-two drill holes (including daughter holes) on nine sections spaced at 150 to 300 metre intervals along a 1,600 metre strike length of the Heruga discovery have now been completed. Significant copper, gold and molybdenum mineralization has been intersected in new drill holes on six of these sections. Five drills are currently active on the Heruga Deposit.

Greg Crowe, President and CEO of Entrée, commented, "This latest round of drilling has increased the size of the copper-gold-molybdenum system at Heruga and confirmed similarities to Oyu Tolgoi-style mineralization. We now have much greater confidence in the continuity of the Heruga discovery from section to section. Our partner, Ivanhoe Mines, has undertaken an ambitious program to continue exploring this system, which remains open to the east and north. Combined with the mineralization discovered on Entrée's ground to the north of Oyu Tolgoi, this mineralized structural trend has now been traced for over twenty kilometres, with the greatest upside potential for additional discoveries on Entrée's ground.

**Discussion and Highlights of Recent Drilling**

Over 34,000 metres have been drilled to date on Heruga. The results of this work have provided Entrée and Ivanhoe with substantial information about the structure and controls of the mineralization. Recent drilling has outlined a coherent block of copper-gold-molybdenum mineralization extending for approximately 1,600 metres north-south, with a vertical thickness typically varying between 400 to 800 metres, and a width of 200 to 300 metres. The mineralization is deep, with the shallowest portion on most sections starting at between 500 and 600 metres vertical depth.

The most recent results support the working theory that gold-rich copper mineralization is capped by a molybdenum-rich shell. The similarities in structural setting, host rock lithologies and styles of alteration suggest that the mineralization at Heruga was formed at the same time as that of the Oyu Tolgoi deposits located 5 to 15 kilometres to the north.

Current drilling is focused on adding to mineralization along the east side, with five holes in progress. To the west, mineralization is present on the down-dropped side of the Bor Tolgoi Fault, but has not been sufficiently defined. At the south end of the deposit, the zone is apparently cut-off by an east-west trending fault to the south of the EJD0022 section. In the north, hole EJD001A deepened the earlier hole, EJD001, which had been terminated at a depth of 1138 metres. Hole EJD001A intersected over 400

---

metres of gold-rich mineralization, supporting the theory that the mineralized zone deepens and plunges to the north below the depth of previous drilling.

The Oyu Tolgoi structural trend, as currently defined, now has a total strike length in excess of 20 kilometres, encompassing Oyu Tolgoi in the centre and extensions onto the joint Entrée/Ivanhoe agreement area to both the south and north. From the Heruga Deposit in the south, the trend now extends through the Oyu Tolgoi deposits to the lower grade Ulaan Khud Zone (Airport North Zone), located approximately 10 kilometres north-northeast of the Hugo Dummett Deposit.

Significant results from eight additional holes are summarized in Table 1. Hole collar locations are shown on a map posted on the Entree website at [www.entreegold.com](http://www.entreegold.com). Earlier drill results from Heruga were reported in news releases dated October 3 and October 9, 2007.

\*Copper Equivalent estimated using \$1.15/lb copper, \$500/oz gold and \$10/lb molybdenum, without regard to recoveries.

- 3 -

Additional drill results and sections from the Heruga Deposit will be posted to Entrée's web site at [www.entreegold.com](http://www.entreegold.com) and to Ivanhoe Mines website at [www.ivanhoemines.com](http://www.ivanhoemines.com).

#### **Corporate Update**

Entrée Gold has promoted Mona M. Forster to the position of Vice President and Corporate Secretary. Ms. Forster has been with the Company for over four years, during which time she has served as Business Manager and Corporate Secretary.

#### **Quality Assurance and Quality Control**

## Edgar Filing: ENTREE GOLD INC - Form 6-K

Robert Cann, P.Ge., Entrée's Vice-President, Exploration, a qualified person as defined by NI 43-101, supervised the preparation of the information in this news release.

SGS Mongolia LLC prepares the split core at the project site and assays all samples at its facility in Ulaanbaatar, Mongolia. Ivanhoe's QA/QC program is monitored by independent consultant Dr. Barry Smee, P.Ge., and managed on site by Dale Sketchley, M.Sc., P.Ge. In-house, matrix-matched copper-gold-molybdenum standards and blanks are inserted at the sample preparation lab on the project site to monitor the quality control of the assay data.

### ABOUT ENTRÉE GOLD INC.

Entrée Gold Inc. ([www.entreegold.com](http://www.entreegold.com)) is a Canadian mineral exploration company focused on the worldwide exploration and development of gold and copper prospects. Most notably, the Company is a large landholder in Mongolia, where it holds a 100% interest in mineral concessions that comprise the 179,590-hectare Lookout Hill (Shivee Tolgoi) property, which completely surrounds the 8,500-hectare Turquoise Hill (Oyu Tolgoi) project of Ivanhoe Mines Ltd. (Ivanhoe Mines), and hosts the Hugo North Extension of the Hugo Dummett Deposit and the newly discovered Heruga Deposit.
