Item 1. INFORMATION CONTAINED IN THIS FORM 6-K REPORT

Attached as Exhibit 99.1 is a copy of the press release of Golar LNG Limited dated August 22, 2007.

---

Exhibit 99.1

SECOND QUARTER INTERIM REPORT

April - June 2007

Highlights

- Golar LNG reports its highest ever quarterly net income for the third quarter in a row
  - Sale of Korea Line investment gives rise to \$73.5 million gain
  - Improvement in utilization of Golar's spot vessels
- A gain this quarter of \$6.6 million in respect of the Company's equity swap
  - Golar announces a cash dividend of \$0.50 per share

Results

Golar LNG reports net income of \$89.6 million for the three months ended June 30, 2007 (the "second quarter"), as compared to \$53.3 million for the three months ended March 31, 2007 (the "first quarter"). This significant improvement is mainly attributable to the gain arising as a result of the sale of the Company's investment in Korea line, which resulted in a book gain of \$73.5 million. Operating income for the second quarter of \$18.8 million was down on the first quarter's \$58.6 million but after adjusting for the gain on sale of a newbuilding of \$41.1 million booked in the first quarter there is an underlying increase in the second quarter of \$1.3 million.

Operating revenues have increased to \$57.1 million in the second quarter as compared to \$53.7 million for the first quarter and have benefited from improved levels of utilization of the Company's spot vessels. Revenues have been negatively affected in both quarters by the drydocking of vessels. The drydocking of the Gimi in the second quarter straddled the quarter end and stretched into the third quarter by approximately 15 days. Average daily time charter equivalents (TCE's) for the fleet were \$50,936 for the second quarter as compared to \$48,416 for the first quarter of 2007 and \$49,700 for the second quarter of 2006.

Vessel operating expenses at \$13.4 million for the second quarter were in line with the first quarter. Administrative expenses were \$5.2 million, an increase of \$1.4 million on the first quarter of 2007. The increase is mainly due to an increase in the charge in respect of share options as a result of an improvement in the Company's share price.

---

An impairment charge of \$2.3 million has been booked this quarter, which relates to parts ordered for the Company's original speculative FSRU conversion project that will not now be required for the conversion of the Golar Spirit (or the Golar Winter) for the Petrobras contract. These parts could potentially be used in alternative projects or sold to a third party but given the specialised nature of the assets these alternative uses may not recover the full cost to the Company. The charge has been made based on management's best estimate of the likely recoverable amount for these parts, the total cost of which, after this impairment charge, is \$17 million. Net interest expense for the second quarter was \$14.5 million, slightly down from \$15.2 million for the first quarter of 2007.

Other financial items were a gain in the second quarter of \$15.4 million as compared to a loss of \$2.0 million for the first quarter. This is primarily due to a book gain on interest rate swap valuations in the second quarter of \$8.4 million and a gain of \$6.6 million arising as a result of the termination of the Company's equity swap. The interest rate swap gains arose as a result of rising long-term interest rates during the quarter, however that movement has now largely been reversed.

As noted above and previously announced the company sold its shares in Korea Line during the second quarter. The net proceeds from this sale amounted to \$173.4 million, which after deducting the book value of \$99.9 million gives rise to a gain on sale of \$73.5 million. This investment originally cost the Company \$34 million in 2004 and therefore represents a significant return on investment.

Earnings per share for the second quarter were \$1.37 as compared to \$0.81 for the first quarter and are therefore \$2.18 for the six months to June 30, 2007.

The Board has declared three dividends in 2007 totalling \$1.75 per share based on the results for 2006, the sale of one newbuilding and the sale of the Korea Line investment. As previously communicated the Board expects to pay regular dividends moving forward but these will be dependent upon results. The Board has declared a dividend this quarter of \$0.50 per share; part of this dividend is a final distribution in respect of the Korea Line share sale and so should not be seen as an indicative level of quarterly dividends for the future. The record date for the dividend is September 3, 2007, ex dividend date is August 30, 2007 and the dividend will be paid on or about September 18, 2007.

#### Corporate and Other Matters

Following the award of the two 10 year FSRU charters by Petrobras, reported last quarter, project engineering and development work has progressed significantly. The project teams within Golar and Moss Maritime, who Golar have contracted to work on both vessels, have now fully mobilised the resources needed to finalise the design and engineering for the conversion of Golar Spirit and Golar Winter into FSRU's for employment by Petrobras. Arrangements are also being finalised with the shipyards and suppliers to ensure on time delivery of both the FSRU's. The full suite of contractual agreements relating to the 2 FSRU's have been finalised during the quarter and are scheduled for formal signing shortly.

---

The Livorno project continues to make steady progress toward the final investment decision (FID), which is now targeted for October 2007. Saipem continues work on the vessel conversion on a limited notice to proceed (LNTP) basis as reported last quarter. A team of Saipem engineers have sailed on Golar Frost in order to complete a detailed inspection of the vessel's existing equipment as part of the detailed design of the conversion work scope. During the quarter, the shareholders of OLT Offshore LNG Toscana SpA, the operating company behind the regasification terminal, agreed to a capital increase to fund the project until FID. Endesa and Iride, as the main offtakers of the terminal, have fully committed to funding the capital increase and will be responsible for the development of the project until FID. The shareholdings have now become Endesa 30.46%, Iride 27.15%, OLT-E 23.74%, Golar 16.38% and ASA 2.27%.

The Cyprus Floating Power Generating Plant (FPGP) project continues to make steady but slow progress. The license to import, store and use the liquefied natural gas (LNG) required to fuel the FPGP is still pending. The regulatory authorities have announced that Golar's application is complete and is currently under review, however the delay appears to be linked to the government's overall LNG strategy. It has been announced that there will be a tender launched by the Cyprus government later this year requesting bids for the supply of LNG into Cyprus. Golar is now considering a modification to the FPGP project scope in order to enable the supply of regasified LNG as well as power from the unit. This combined power and gas solution has strong economic and timing benefits.

Golar continues to progress several other FSRU projects and sees this as a major area of business expansion. Most of these projects could utilize the Company's older vessels currently on charter to BG and which are likely to be redelivered by BG at the end of each charter's initial term during the period from 2008 to 2011, which fits well with the anticipated project portfolio.

The Company recently refinanced an existing loan facility in respect of the Gracilis with a new \$120 million facility which has improved terms and which provided a small amount of additional financing.

## Market

From a depressed first quarter impacted by ships used in the later part of 2006 for floating storage all being released back onto the market in the Far East at about the same time, the second quarter has seen a steady increase in employment opportunities accompanied by a modest increase in charter rates. In July a reported accident in Japan at one of TEPCO's nuclear power plants has noticeably tightened the market with cargoes originally intended for the Atlantic Basin markets now being diverted to Japan and other Far East markets to help make up the additional demand for fuel caused by the outage of the nuclear power station.

It currently looks unlikely that the forward gas market conditions needed to support floating storage plays, similar to those experienced during the second half of 2006, will repeat themselves in the second half of 2007. However the forward market for gas is being watched closely by several market participants with the appetite to repeat last years experience if the fundamentals become supportive.

The development in the charter market in the coming months will be strongly influenced by the demand for long haul cargoes into Japan to fill the gap created by the nuclear power station outage. Some reports suggest that this increased appetite for LNG in Japan could persist for the next 12 months. At the moment this additional demand from Japan has driven spot market TC rates up above \$70k per day while rates for one-year employment are around \$65k per day.

Liquefaction projects scheduled for start up during the next 6 months include Snohvit and Nigeria LNG Train 6 and Qatar Gas 2. Whilst these new sources of LNG production have arranged dedicated shipping capacity the significant increase in LNG output should further improve liquidity in the short term LNG trading and chartering businesses.

#### Outlook

The Board believes that the award of the Petrobras contracts represents a significant milestone in the development of the Company and its project portfolio, which fully covers LNG mid-stream activity - liquefaction, shipping, trading and regasification. It demonstrates the Company's ability to successfully develop these projects, provides a clear demonstration of their potential value and also provides evidence of the growing market for floating solutions.

The previously announced study on how to optimise the value of the Company's LNG logistic investments and projects continued during the quarter. The study carefully considered two restructuring options. The first option considered separation of traditional LNG shipping activities from project development activities. The second option considered separation of long-term charters (regardless of asset type) from short-term LNG Carrier chartering and project development activities. Whilst both restructuring options offered benefits and could be developed over time the Company has decided to initially pursue option 2. The Company has therefore been reviewing alternative structures, including master limited partnerships (MLPs), with the objective of enhancing shareholder value and providing investors with a choice of risk profiles.

The Board anticipates that earnings in the third quarter of 2007 from the Company's spot vessels may show some improvement on the second quarter, this will however be offset by the Spirit being withdrawn from service in readiness for the FSRU conversion work. Due to existing time charters, time delays and offhire TCE results will be lower than the current spot market rates. The Company will also not be equity accounting for Korea Lines results following the sale of this investment.

The Board is pleased with the recent development of the Company and is optimistic about future the development of the Company's various maturing business opportunities and the possibilities to increase long-term returns to shareholders.

#### Forward Looking Statements

This press release contains forward looking statements. These statements are based upon various assumptions, many of which are based, in turn, upon further assumptions, including examination of historical operating trends made by the management of Golar LNG. Although Golar LNG believes that these assumptions were reasonable when made, because assumptions are inherently subject to significant uncertainties and contingencies, which are difficult or impossible to predict and are beyond its control, Golar LNG cannot give assurance that it will achieve or accomplish these expectations, beliefs or intentions.

---

Included among the factors that, in the Company's view, could cause actual results to differ materially from the forward looking statements contained in this press release are the following: inability of the Company to obtain financing for the new building vessels at all or on favourable terms; changes in demand; a material decline or prolonged weakness in rates for LNG carriers; political events affecting production in areas in which natural gas is produced and demand for natural gas in areas to which our vessels deliver; changes in demand for natural gas generally or in particular regions; changes in the financial stability of our major customers; adoption of new rules and regulations applicable to LNG carriers and FSRU's; actions taken by regulatory authorities that may prohibit the access of LNG carriers or FSRU's to various ports; our inability to achieve successful utilisation of our expanded fleet and inability to expand beyond the carriage of LNG; our ability to complete on our restructuring plans; increases in costs including: crew wages, insurance, provisions, repairs and maintenance; changes in general domestic and international political conditions; changes in applicable maintenance or regulatory standards that could affect our anticipated dry-docking or maintenance and repair costs; our ability to timely complete our FSRU conversions; failure of shipyards to comply with delivery schedules on a timely basis and other factors listed from time to time in registration statements and reports that we have filed with or furnished to the Securities and Exchange Commission, including our Registration Statement on Form 20-F and subsequent announcements and reports.

Nothing contained in this press release shall constitute an offer of any securities for sale.
