*Press Release*

**CVRD announces a US\$ 1.8 billion capex budget for 2004**

Rio de Janeiro, 28 January 2004 - Companhia Vale do Rio Doce (CVRD) has announced the approval of a capital expenditure budget totaling US\$ 1.815 billion for 2004. Of this total, 66.2%, or US\$ 1.202 billion, is growth capex, and the remaining US\$ 613.3 million is stay-in-business capex - to support and sustain existing businesses. These figures are the consolidated totals for the parent company and those companies that are consolidated under US GAAP (Generally Accepted Accounting Principles in the United States).

Given the expected cash flow for 2004, capital expenditures of US\$ 1.815 billion and a minimum dividend of US\$ 550 million are consistent with the preservation of a healthy balance sheet, with low financial leverage and high interest coverage ratios. Growth capex is expected to create substantial shareholder value as the risk-adjusted expected rates of return for the projects are far above CVRD's estimated weighted average cost of capital. At the same time, these investments will contribute to strengthen CVRD's competitiveness in the global mining and metals markets.

This year budgeted capex increased 22.1% over the US\$ 1.486 billion (excluding acquisitions) spent in 2003. Last year, acquisitions - Caemi, Rana (Rio Doce Manganese Norway) and CST shares - amounted to US\$ 502 million.

**Additional iron ore capacity of 73 million tons per year**

The total allocated for greenfield and brownfield projects is US\$ 1.138 billion. The most important initiatives are dedicated to the expansion of production capacity in iron ore, bauxite, alumina and potash, the conclusion of the Sossego copper project, the initial work on the 118 copper project, power generation, and the acquisition of wagons and locomotives.

Projects will add to the Company's annual production capacity 73 million tons of iron ore, 4.5 million tons of bauxite, 1.8 million tons of alumina, 250 thousand tons of potash, and 185 thousand tons of copper over the next few years. In 2003, CVRD produced 186 million tons of iron ore (US GAAP).

As result of the start-up of Candonga and Aimorés hydroelectric power plants in 2004, there will be an increase in electricity generation of 119 MW. Therefore, CVRD's power plants - Igarapava, Porto Estrela, Funil, Candonga, and Aimorés - will be able to generate energy to meet the electricity demands of the Southern System (iron ore mines, Vitoria a Minas railroad, the port and the pelletizing plants of Tubarão) and part of the Carajás copper mines consumption.

The purchase of 88 locomotives and 3,178 wagons will produce an increase of the CVRD rolling stock - 744 locomotives and 30,473 wagons at the end of 2003 - to support the growth in iron ore transportation and in logistics services to clients.

**A global and multi-commodity mineral exploration program**

The budget allocates capex of US\$ 78 million to mineral exploration, of which US\$ 14 million is the BNDES contribution under the Mineral Risk Contract, signed in March 1997. The US\$ 14 million contribution is not included in the US\$ 1.815 billion capex budget.

CVRD has a multi-commodity exploration program, involving at least seven different types of minerals, and spread across the globe. Although 77.1% of the total is planned to be spent in Brazil - and 41.6% of the total in the Carajás mineral province - CVRD is actively involved in exploration in South America (Peru and Chile), Africa (Gabon, Mozambique) and Asia (Mongolia and China), and is evaluating opportunities in several other countries.

**Table of Contents***Press Release***Maintenance of existing businesses**

The budget for stay-in-business capex is made up of: (i) environmental protection and maintenance, US\$ 335.9 million; (ii) modernization of existing operations, US\$ 149.4 million; (iii) information technology, US\$ 74.4 million; and (iv) research and development, US\$ 53.6 million.

**Main projects**

Business	Project	Budget US \$ million		Status
		2004	Total	
Ferrous Minerals	Expansion of <b>Carajás</b> iron ore mines to 70 Mtpy (Northern System)	76.4	144.0	Carajás will produce 70 million tons of iron ore in 2004. Monthly production will be accelerated from March onwards. The project is approximately 12 months ahead of the original schedule.
	Further expansion of <b>Carajás</b> iron ore output to 85 Mtpy (Northern System)	28.8	185.0	Startup expected in 2006. The total amount includes expansion of mine, mill and port (Pier III, second phase). Capex per ton is US\$ 12.30.
	<b>Brucutu</b> iron ore mine phase I - Southern System	37.3	147.0	The first phase is scheduled for startup in 2006, when the mine will have capacity to produce 12 Mtpy. Phase II, already planned, will add a further 12 Mtpy starting 2008. Capex per ton is US\$ 12.22.
	<b>Fábrica Nova</b> iron ore mine-Southern System	31.1	85.0	Expected to reach nominal production capacity of 10 Mtpy in 2005, and 15 Mtpy in 2009. Capex per ton is US\$ 5.67.
	<b>Fazendão</b> iron ore mine-Southern System	3.0	89.0	Expansion of 14 Mtpy at the <b>Fazendão</b> mine, with startup planned for 2006. Capex per ton of US\$ 6.35. ROM (run-of-mine) production processed by mills of other mines.
	<b>Itabira</b> iron ore mine-Southern System	13.2	56.0	Expansion of the <b>Itabira</b> mine's production from 43 to 46 Mtpy, with startup planned for 2006, for capex per ton of US\$ 18.70.
	<b>Tubarão</b> Port	25.9	53.0	Increase in port capacity from 66 Mtpy to 78 Mtpy via the acquisitions of new equipment and construction of silos as well as stockyards. Conclusion of the project scheduled for 2005.
Non-ferrous Minerals	<b>Sossego</b> copper project	16.5	413.1	The project will be commissioned this quarter (1Q04) with ramp-up of production during 2Q04. Commercial production planned to start in July - with average output of 455 thousand tons per year of copper concentrate (equivalent to 140 thousand tons per year of copper metal).
	<b>118</b> copper project	44.8	179.0	Work scheduled to start in 2Q04. Planned to come on stream in December 2005. The mine, fed by a copper oxide deposit, will produce an average 45 thousand tons per year of copper cathode, produced using the SxEW process.
	<b>Taquari-Vassouras</b> potash mine - expansion	21.2	67.0	Completion planned for third quarter 2005. The expansion will increase capacity to 850 thousand tons per year.
Aluminum	<b>Paragominas I</b>	83.2	271.0	

## Edgar Filing: VALLEY OF THE RIO DOCE CO - Form 6-K

Startup for the Paragominas bauxite mine is planned for 2006, with initial production capacity of 4.5 million tons/year of bauxite. Paragominas will supply stages 4 and 5 of Alunorte and the further expansion of the alumina production capacity. Capex per ton is US\$ 60.22.

	<b>Alunorte</b> : stages 4 and 5	183.3	583.0	Will expand the plant's capacity by 1.8 million tons/year. Construction began in third quarter 2003; completion expected in 2006. Capex per ton is US\$ 324.00.
Logistics	<b>Vitória-Minas and Carajás Railroads:</b> rolling stock acquisition	182.0	182.0	Purchase of: 6 locomotives and 1,257 wagons for iron ore transport; 12 locomotives and 754 wagons for general cargo. Total purchase: 18 locomotives and 2,011 wagons.
	<b>Centro-Atlantica Railroad (FCA):</b> rolling stock acquisition	130.6	130.6	Purchase of: 70 locomotives (mainly secondhand, for refurbishment) and 1,167 wagons, all for general cargo.

**Table of Contents***Press Release*

Business	Project	Budget US \$ million		Status
		2004	Total	
Power Generation	<b>Aimorés</b> hydroelectric plant	19.0	112.9	CVRD owns 51% of this 330 MW hydroelectric plant, on the Rio Doce River in the Brazilian state of Minas Gerais. Startup is scheduled for 3Q04.
	<b>Candongá</b> hydroelectric plant	3.5	44.5	This 140 MW hydroelectric plant is located on the Rio Doce River. Startup is expected in 1Q04. CVRD owns 50%.
	<b>Capim Branco I</b> hydroelectric plant	20.9	80.5	This is a 240 MW hydroelectric plant, located on the Araguaia River (state of Minas Gerais, Brazil). Startup is planned for 1Q06. CVRD owns 48.42%.
	<b>Capim Branco II</b> hydroelectric plant	12.7	79.3	Located on the Araguaia River: 210 MW, startup planned for 1Q06. CVRD owns 48.42%.

**Breakdown of mineral exploration Capex**

By product	%	By country	%
Copper	28.7%	Brazil	77.1%
Nickel	20.0%	- Carajás	41.6%
Manganese	17.3%	Peru	6.8%
PGM	7.5%	Chile	3.6%
Kaolin	7.0%	Gabon	9.0%
Gold	6.6%	China and Mongolia	1.8%
Bauxite	5.7%	Others	1.6%
Others	7.3%

This press release may contain statements that express management's expectations about future events or results other than historical facts. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those projected in forward-looking statements, and CVRD cannot give assurance that such statements will prove correct. These risks and uncertainties include factors: relating to the Brazilian economy and securities markets, which exhibit volatility and can be adversely affected by developments in other countries; relating to the iron ore business and its dependence on the global steel industry, which is cyclical in nature; and relating to the highly competitive industries in which CVRD operates. For additional information on factors that could cause CVRD's actual results to differ from expectations reflected in forward-looking statements, please see CVRD's reports filed with the Brazilian Comissão de Valores Mobiliários and the U.S. Securities and Exchange Commission.

*Press Release*

**CVRD Announces the Minimum Dividend to be Paid in 2004**

Rio de Janeiro, January 28, 2004 - Companhia Vale do Rio Doce (CVRD) informs that the Executive Directors will submit to the Board of Directors of the Company the proposal to pay a minimum dividend for 2004 of US\$ 1.43 per share, common or preferred, in two equal installments on April 30 and October 29.

The Board of Directors will consider the proposal of the Executive Directors in the Board meetings scheduled to take place on April 14 and October 13, 2004. The amount announced will be paid in local currency and determined based on the Real/US Dollar foreign exchange rate (Ptax - option 5) disclosed by the Central Bank of Brazil on the last workday prior to the Board meetings that will approve the dividend distribution and the respective payment to the shareholders. The time periods between the Board meeting dates and the start of the dividend payment dates are determined by the amount of time needed to accomplish the operational steps required to complete such transactions.

CVRD shares will be traded ex-dividend in the stock exchanges (Bovespa, Latibex, NYSE) from April 15 and October 14, respectively.

The minimum amount of US\$ 1.43 per share, totaling US\$ 550 million, is in full correspondence with the Dividend Policy approved in 2002 and is consistent with expected evolution of the free cash flow and the maintenance of prudent levels of financial leverage. Compared to the 2003 minimum dividend of US\$ 1.04 per share, the 2004 minimum dividend increased 37.5%.

Last year, the total profit distributed to CVRD shareholders reached R\$ 5.04 per share, common or preferred, totaling R\$ 1.935 billion. In US dollars, the figures were US\$ 1.75 per share and US\$ 675 million, respectively.

In 2003, the dividend yield of CVRD in US Dollars, was 3.4%, while on average in the last five years, 1999-2003, it reached 5.6%. Moreover, the total shareholder return (TSR) of CVRD, which includes the increase in the price of the shares and dividends distributed, in US Dollars, reached 93.7% in 2003 and an annual average of 40.2% from 1999 to 2003.

**CVRD 2003 Production Report**

**A Year of Records**

Rio de Janeiro, January 28, 2004 Companhia Vale do Rio Doce (CVRD) discloses its minerals and metals production report for 2003. CVRD will henceforth distribute regularly quarterly production reports.

Last year and, in particular in the fourth quarter (4Q03), many production records were achieved. Such performance resulted from the strong growth in global demand for minerals and metals and from the decision, now proven correct, to expand production capacity, as was the case in São Luís, MRN and Alunorte, and/or to focus on the strong productivity gains, which were attained.

***Highlights***

***Iron Ore***

Under US GAAP (United States Generally Accepted Accounting Principles), CVRD production increased 10.3%, from 168.6 million tons in 2002 to 186.0 million tons in 2003. Excluding CAEMI, which was consolidated starting in September 2003, CVRD produced 138.0 million tons in 2002 vis-à-vis the 150.0 million tons produced in 2003, representing an increase of 8.7%.

Therefore, even if CAEMI is excluded, the iron ore production of 150.0 million tons in 2003 was a historical record.

The Southern System registered a record annual production, with 90.353 million tons produced in 2003, the same was observed in Carajás, with 58.929 million tons.

In December 2003, monthly production records were also registered, both in the Southern System mines 8.011 million tons as well as in Carajás 5.486 million tons.

***Pellets***

Under US GAAP, which does not include the pelletizing joint ventures (Nibrasco, Kobrasco, Hispanobrás, Itabasco, Samarco and GIIC), pellet production increased 29.2%, with the production running a full capacity in the São Luís plant in the second half of 2003.

Under BR GAAP (Brazilian Generally Accepted Accounting Principles), where the production volumes from the pelletizing joint ventures are included proportionally to CVRD's ownership share in these companies, pellet production reached 31.128 million tons in 2003 vis-à-vis 26.342 million tons in 2002.

The Fabrica plant, Kobrasco and Samarco attained production records in 2003. In December, monthly production records were achieved in Fábrica and Kobrasco. In the same month, the São Luís operation produced 526 thousand tons, having therefore reached the end of the plant ramp up process.

***Manganese***

Manganese ore production decreased 3.7%, reaching 2.244 million tons in 2003, even though Urucum achieved an annual record, with 414 thousand tons. The slight decrease in total production was due to the utilization in 2003 of stockpiles in the Azul mine in Carajás.

**Table of Contents**

*Press Release*

***Ferro Alloys***

Alloy production increased 9.5%, reaching 481 thousand tons in 2003. Rio Doce Manganese Norway (RDMN), acquired in February 2003 and restructured in the following months, started to produce manganese ferro-alloys in the second half of the year, having produced 21 thousand tons.

***Bauxite***

With the end of the capacity expansion project in Trombetas, Mineração Rio do Norte (MRN) achieved a bauxite annual production record of 14.406 million tons.

***Alumina***

With the start of operations of the stage 3, alumina production at Alunorte also registered an annual record of 2.323 million tons in 2003.

***Primary Aluminum***

Production at Albras, of 432 thousand tons, was also a record, which was achieved as a result of strong productivity gains, given that its annual nominal capacity was 406 thousand tons.

***Kaolin***

Kaolin production at PPSA was also a record, with 423 thousand tons in 2003. In 4Q03, production at PPSA registered a quarterly record of 127 thousand tons.

***Potash***

Production at the Taquari-Vassouras mine was greater than its nominal capacity of 600 thousand tons, having reached 658 thousand tons in 2003, which was also a record.

- \* 1) Under Consolidated BR GAAP, CVRD consolidates the total production of all the companies in which CVRD has more than 50% of the voting capital and effective control.
- 2) For the companies in which CVRD has shared control, the volume consolidation is proportional to CVRD s ownership stake in the company.
- 3) The production volume of companies in which CVRD has minority interests are not consolidated.

This press release may contain statements that express management's expectations about future events or results rather than historical facts. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those projected in forward-looking statements, and CVRD cannot give assurance that such statements will prove correct. These risks and uncertainties include factors: relating to the Brazilian economy and securities markets, which exhibit volatility and can be adversely affected by developments in other countries; relating to the iron ore business and its dependence on the global steel industry, which is cyclical in nature; and relating to the highly competitive industries in which CVRD operates. For additional information on factors that could cause CVRD's actual results to differ from expectations reflected in forward-looking statements, please see CVRD's reports filed with the Brazilian Comissão de Valores Mobiliários and the U.S. Securities and Exchange Commission.

**CVRD and Baosteel Sign a Contract to Assess Project Feasibility**

Rio de Janeiro, February 3, 2004 Companhia Vale do Rio Doce (CVRD), the world's largest producer of iron ore, and Baosteel Shanghai Group Corporation (Baosteel), the largest Chinese steelmaker, decided to assess the feasibility of implementing a joint venture to build and operate an integrated steel plant in São Luís, state of Maranhão, Brazil, to produce about 3.7 million tons per year of steel slabs. The project considers also the possibility for a future capacity expansion to 7.5 million tons of steel slabs per year.

CVRD and Baosteel signed with Ferrostaal AG (Ferrostaal), a German engineering services company, and CISDI Engineering Co. Ltd. (CISDI), a Chinese engineering company, an Engineering Service Agreement for the Basic Engineering and a Bankable Feasibility Study of the Project. Ferrostaal and CISDI will prepare a complete report to support decision-making by CVRD and Baosteel. Arcelor, the world's largest steelmaker, also intends to participate in the project.

The slab plant will be the largest investment in the Brazilian steel industry in many years and is expected to generate significant social and economic benefits for the Northeastern region of Brazil through job creation and income growth. The project is fully supported by the Governments of Brazil and China and by the Government of the State of Maranhão. Among the authorities present at the signing ceremony, there were the Governor of the State of Maranhão, Mr. José Reinaldo Tavares, and the Brazilian Ambassador to China, Mr. Affonso Celso de Ouro-Preto.

The project, if implemented, will further increase the demand for CVRD iron ore products. Roger Agnelli, CEO of CVRD, said that the signing is a further vote of confidence that recognizes the strength of the partnership between Baosteel and CVRD. The agreement is consistent with CVRD's business strategy, focused on market diversification and growth.

Madame Xie Qihua, Chairwoman and President of Baosteel said that this agreement will be the first of many opportunities for the Chinese iron and steel industry to take advantage of the Brazilian capability as a low-cost producer of steel. More importantly, it shows a bright future for a deeper economic relationship between Brazil and China.
