SECURITIES AND EXCHANGE COMMISSION
WASHINGTON, D.C. 20549
FORM 10-Q

QUARTERLY REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934

FOR THE QUARTERLY PERIOD ENDED June 30, 2009

Commission file number 0-7818

INDEPENDENT BANK CORPORATION

(Exact name of registrant as specified in its charter)

Michigan

38-2032782

(State or jurisdiction of
Incorporation or Organization)

(I.R.S. Employer Identification
Number)

230 West Main Street, P.O. Box 491, Ionia, Michigan 48846

(Address of principal executive offices)
(616) 527-9450

(Registrant's telephone number, including area code)
NONE

Former name, address and fiscal year, if changed since last report.

Indicate by check mark whether the registrant (1) has filed all documents and reports required to be filed by Sections 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. YES NO

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files)
YES NO

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer and smaller reporting company in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer Smaller reporting company

(Do not check if a smaller reporting company)

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).
YES NO

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Common stock, par value \$1 24,029,540

Class

Outstanding at August 7, 2009

Any statements in this document that are not historical facts are forward-looking statements as defined in the Private Securities Litigation Reform Act of 1995. Words such as expect, believe, intend, estimate, project, may and similar expressions are intended to identify forward-looking statements. These forward-looking statements are predicated on management's beliefs and assumptions based on information known to Independent Bank Corporation's management as of the date of this document and do not purport to speak as of any other date. Forward-looking statements may include descriptions of plans and objectives of Independent Bank Corporation's management for future or past operations, products or services, and forecasts of the Company's revenue, earnings or other measures of economic performance, including statements of profitability, business segments and subsidiaries, and estimates of credit quality trends. Such statements reflect the view of Independent Bank Corporation's management as of this date with respect to future events and are not guarantees of future performance; involve assumptions and are subject to substantial risks and uncertainties, such as the changes in Independent Bank Corporation's plans, objectives, expectations and intentions. Should one or more of these risks materialize or should underlying beliefs or assumptions prove incorrect, the Company's actual results could differ materially from those discussed. Factors that could cause or contribute to such differences are changes in interest rates, changes in the accounting treatment of any particular item, the results of regulatory examinations, changes in industries where the

Company has a concentration of loans, changes in the level of fee income, changes in general economic conditions and related credit and market conditions, and the impact of regulatory responses to any of the foregoing. Forward-looking statements speak only as of the date they are made. Independent Bank Corporation does not undertake to update forward-looking statements to reflect facts, circumstances, assumptions or events that occur after the date the forward-looking statements are made. For any forward-looking statements made in this document, Independent Bank Corporation claims the protection of the safe harbor for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995.

NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS

(unaudited)

1. The interim condensed consolidated financial statements have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission. Certain information and note disclosures normally included in annual financial statements prepared in accordance with generally accepted accounting principles have been condensed or omitted pursuant to those rules and regulations, although we believe that the disclosures made are adequate to make the information not misleading. The unaudited condensed consolidated financial statements should be read in conjunction with the audited consolidated financial statements and notes for the year ended December 31, 2008 included in our annual report on Form 10-K.

In our opinion, the accompanying unaudited condensed consolidated financial statements contain all the adjustments necessary to present fairly our consolidated financial condition as of June 30, 2009 and December 31, 2008, and the results of operations for the three and six-month periods ended June 30, 2009 and 2008. Certain reclassifications have been made in the prior year financial statements to conform to the current year presentation. Our critical accounting policies include the assessment for other than temporary impairment on investment securities, the determination of the allowance for loan losses, the valuation of derivative financial instruments, the valuation of originated mortgage loan servicing rights, the valuation of deferred tax assets and the valuation of goodwill. Refer to our 2008 Annual Report on Form 10-K for a disclosure of our accounting policies.

2. In July 2009, the Financial Accounting Standards Board (FASB) issued Statement of Financial Accounting Standards (SFAS) No. 168, The FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles, a replacement of FASB Statement No. 162 . The objective of this statement is to replace SFAS No. 162 The Hierarchy of Generally Accepted Accounting Principles , and to establish the FASB Accounting Standards Codification as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities in the preparation of financial statements in conformity with Generally Accepted Accounting Principles (GAAP). Rules and interpretive releases of the Securities and Exchange Commission (SEC) under authority of federal securities laws are also sources of authoritative GAAP for SEC registrants. This statement is effective for financial statements issued for interim and annual periods ending after September 15, 2009.

In April 2009, the FASB issued Staff Position (FSP) No. 115-2 and No. 124-2, Recognition and Presentation of Other-Than-Temporary Impairments . This FSP amends existing guidance for determining whether impairment is other-than-temporary for debt securities and requires an entity to assess whether it intends to sell, or it is more likely than not that it will be required to sell a security in an unrealized loss position before recovery of its amortized cost basis. If either of these criteria is met, the entire difference between amortized cost and fair value is recognized in earnings. For securities that do not meet the aforementioned criteria, the amount of impairment recognized in earnings is limited to the amount related to credit losses, while impairment related to other factors is recognized in other comprehensive income. Additionally, this FSP expands and increases the frequency of existing disclosures about other-than-temporary impairments for debt and equity securities. This FSP is effective for interim and annual reporting periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The adoption of this FSP in the second quarter of 2009 did not have a material effect on our consolidated financial statements.

In April 2009, the FASB issued FSP No. 157-4, Determining Fair Value When the Volume and Level of Activity for the Asset and Liability Have Significantly Decreased and Identifying Transactions That Are Not Orderly . This FSP emphasizes that even if there has been a significant decrease in the volume and level of activity, the objective of a fair value measurement

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

remains the same. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction (that is, not a forced liquidation or distressed sale) between market participants. This FSP provides a number of factors to consider when evaluating whether there has been a significant decrease in the volume and level of activity for an asset or liability in relation to normal market activity. In addition, when transactions or quoted prices are not considered orderly, adjustments to those prices based on the weight of available information may be needed to determine the appropriate fair value. This FSP is effective for interim and annual reporting periods ending after June 15, 2009, and shall be applied prospectively. Early adoption is permitted for periods ending after March 15, 2009. The adoption of this FSP in the second quarter of 2009 did not have a material effect on our consolidated financial statements.

In April 2009, the FASB issued FSP No. 107-1 and APB 28-1, *Interim Disclosures about Fair Value of Financial Instruments*. This FSP amends Statement of Financial Accounting Standards (SFAS) No. 107, *Disclosures about Fair Value of Financial Instruments*, to require disclosures about fair value of financial instruments for interim reporting periods of publicly traded companies that were previously only required in annual financial statements. This FSP is effective for interim reporting periods ending after June 15, 2009, with early adoption permitted for periods ending after March 15, 2009. The adoption of this FSP at June 30, 2009 did not have a material impact on our consolidated financial statements as it only required disclosures which are included in note 13.

In May 2009, the FASB issued SFAS No. 165, *Subsequent Events*. This statement establishes general standards of accounting for and disclosure of events that occur after the balance sheet date but before financial statements are issued or are available to be issued. This statement is effective for financial statements issued for interim or annual periods ending after June 15, 2009. We adopted this statement during the second quarter of 2009. We have evaluated subsequent events through August 7, 2009 which represents the date our financial statements included in our June 30, 2009 Form 10-Q were filed with the Securities and Exchange Commission (financial statement issue date). We have not evaluated subsequent events relating to these financial statements after that date.

In February 2008, the FASB issued FSP 157-2, *Effective Date of FASB Statement No. 157*. This FSP delays the effective date of SFAS #157, *Fair Value* measure for all non-financial assets and non-financial liabilities, except those that are recognized or disclosed at fair value on a recurring basis (at least annually) to fiscal years beginning after November 15, 2008, and interim periods within those fiscal years. The adoption of this FSP on January 1, 2009 did not have a material impact on our consolidated financial statements.

In March 2008, the FASB issued SFAS No. 161, *Disclosures about Derivative Instruments and Hedging Activities*, an amendment of SFAS No. 133. This statement amends and expands the disclosure requirements of SFAS No. 133 and requires qualitative disclosure about objectives and strategies for using derivative and hedging instruments, quantitative disclosures about fair value amounts of the instruments and gains and losses on such instruments, as well as disclosures about credit-risk features in derivative agreements. This statement is effective for financial statements issued for fiscal years and interim periods beginning after November 15, 2008, with early application encouraged. We adopted this statement on January 1, 2009.

In June 2008, the FASB issued FSP EITF 03-6-1, *Determining Whether Instruments Granted in Share-Based Payment Transactions Are Participating Securities*. This FSP addresses whether these types of instruments are participating prior to vesting and, therefore need to be included in the earnings allocation in computing earnings per share under the two class method described in FASB Statement No. 128, *Earnings Per Share*. This FSP is effective for fiscal years beginning after December 15, 2008, and interim periods within those years. All prior-period earnings per

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

share data presented shall be adjusted retrospectively. The adoption of this FSP on January 1, 2009 had the effect of treating our unvested share payment awards as participating in the earnings allocation when computing our earnings per share. Prior period earnings per share data has been adjusted to treat unvested share awards as participating.

3. Securities available for sale consist of the following at June 30, 2009:

	Amortized Cost	Unrealized Gains Losses		Fair Value
		(In thousands)		
U.S. agency residential mortgage-backed	\$ 53,439	\$ 1,124	\$ 235	\$ 54,328
Private label residential mortgage-backed	43,627	24	7,039	36,612
Other asset-backed	7,493	362	124	7,731
Obligations of states and political subdivisions	84,395	1,133	1,615	83,913
Trust preferred	17,882	27	3,835	14,074
Total	\$ 206,836	\$ 2,670	\$ 12,848	\$ 196,658

Our investments gross unrealized losses and fair values aggregated by investment type and length of time that individual securities have been at a continuous unrealized loss position, at June 30 follows:

	Less Than Twelve Months Unrealized		Twelve Months or More Unrealized		Total Unrealized	
	Fair Value	Losses	Fair Value	Losses	Fair Value	Losses
	(In thousands)					
June 30, 2009						
U.S. agency residential mortgage-backed	\$ 8,280	\$ 235			\$ 8,280	\$ 235
Private label residential mortgage-backed	9,645	219	\$ 24,422	\$ 6,820	34,067	7,039
Other asset backed	3,682	65	2,785	59	6,467	124
Obligations of states and political subdivisions	23,998	1,356	3,459	259	27,457	1,615
Trust preferred	4,064	715	9,916	3,120	13,980	3,835
Total	\$ 49,669	\$ 2,590	\$ 40,582	\$ 10,258	\$ 90,251	\$ 12,848

We evaluate securities for other-than-temporary impairment at least quarterly and more frequently when economic or market concerns warrant such evaluation. Consideration is given to the length of time and the extent to which the fair value has been less than cost, the financial condition of the issuer, including review of recent credit ratings, and our ability and intent to retain the investment for a period of time sufficient to allow for any anticipated recovery of fair value.

U.S. Agency residential mortgage-backed securities at June 30, 2009 we had 7 securities whose fair market value is less than amortized cost. The unrealized losses are largely attributed to rising interest rates. As management does not intend to liquidate these securities and it is more likely than not that we will not be required to sell these securities prior to recovery of these unrealized losses, no declines are deemed to be other than temporary.

Private label residential mortgage and other asset-backed securities at June 30, 2009 we had 26 securities whose fair market value is less than amortized cost. The unrealized losses are largely attributed to credit spread widening on these securities. We have satisfactory relationships between non-performing assets and subordination levels in each security and continue to receive principal reductions. 25 of the issues are rated by a major rating agency as

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

investment grade while 1 is below investment grade.

We reviewed securities for recovery utilizing a cash flow projection. In our analysis, recovery was evaluated by discounting the expected cash flows back at the book yield. If the present value of the future cash flows is less than amortized cost, then there would be a credit loss. Our cash flow analysis forecasted cash flow from the underlying loans in each transaction and then applied these cash flows to the bonds in the securitization. The cash flows from the underlying loans considered contractual payment terms (scheduled amortization), prepayments, defaults and severity of loss given default. The analysis used dynamic assumptions for prepayments, defaults and severity. Near term prepayment assumptions were based on recently observed prepayment rates. In many cases, recently observed prepayment rates are depressed due to a sharp decline in new jumbo loan issuance. This loan market is heavily dependent upon securitization for funding, and new securitization transactions have been minimal. Our model projects that prepayment rates gradually revert to historical levels. Near term default assumptions were based on recent default observations as well as the volume of existing real-estate owned, pending foreclosures and severe delinquencies. Default levels generally remain elevated or increase for a period of time sufficient to address the level of distressed loans in the transaction. Our model expects defaults to then decline gradually as the housing market and the economy stabilize, generally after 3 years. Current severity assumptions are based on recent observations. Loss severity is expected to decline gradually as the housing market and the economy stabilize, generally after 3 years. Our cash flow analysis forecasts complete recovery of our cost basis for each of the reviewed securities. As management does not intend to liquidate these securities and it is more likely than not that we will not be required to sell these securities prior to recovery of these unrealized losses, no declines are deemed to be other than temporary.

Obligations of states and political subdivisions at June 30, 2009 we had 99 municipal securities whose fair market value is less than amortized cost. The unrealized losses are largely attributed to a widening of market spreads and continued illiquidity for certain issues. The majority of the securities are rated by a major rating agency as investment grade. As management does not intend to liquidate these securities and it is more likely than not that we will not be required to sell these securities prior to recovery of these unrealized losses, no declines are deemed to be other than temporary.

Trust preferred securities at June 30, 2009 we had 8 securities whose fair market value is less than amortized cost. There were no credit issues relating to these securities. Pricing of trust preferred securities has suffered from significant credit spread widening fueled by uncertainty regarding potential losses of financial companies, the absence of a liquid functioning secondary market and potential supply concerns from financial companies issuing new debt to recapitalize themselves. 6 of the 8 securities are rated by a major rating agency as investment grade while the other 2 are non-rated. As management does not intend to liquidate these securities and it is more likely than not that we will not be required to sell these securities prior to recovery of these unrealized losses, no declines are deemed to be other than temporary.

During the first quarter of 2009 we recorded an other than temporary impairment charge on a certain trust preferred security in the amount of \$0.02 million. In this instance we believed that the decline in value is directly due to matters other than changes in interest rates (such as underlying collateral deficiencies or financial difficulties or other challenges encountered by the issuer), were not expected to be recovered within a reasonable timeframe based upon available information and were therefore other than temporary in nature. We recorded no other than temporary impairment during the second quarter of 2009.

The amortized cost and fair value of securities available for sale at June 30, 2009, by contractual maturity, follow. The actual maturity will differ from the contractual maturity because issuers may have the right to call or prepay obligations with or without call or prepayment penalties.

	Amortized Cost	Fair Value
	(In thousands)	
Maturing within one year	\$ 3,282	\$ 3,317
Maturing after one year but within five years	16,245	16,645
Maturing after five years but within ten years	28,564	28,749
Maturing after ten years	54,186	49,276
	102,277	97,987
U.S. agency residential mortgage-backed	53,439	54,328
Private label residential mortgage-backed	43,627	36,612
Other asset-backed	7,493	7,731
Total	\$ 206,836	\$ 196,658

Gains and losses realized on the sale of securities available for sale are determined using the specific identification method and are recognized on a trade-date basis. Proceeds from the sale of available securities were \$24.3 million during six months ended June 30, 2009. Gross gains of \$2.8 million and gross losses of \$0.1 million were realized on these sales during the six months ended June 30, 2009.

Net gains on trading securities were \$1.0 million during the six months ended June 30, 2009 and is included in net gains (losses) on securities in the consolidated statements of operations. Of this amount, \$0.03 million relates to gains recognized on trading securities still held at June 30, 2009.

4. Our assessment of the allowance for loan losses is based on an evaluation of the loan portfolio, recent loss experience, current economic conditions and other pertinent factors. Loans on non-accrual status and past due more than 90 days amounted to \$125.3 million at June 30, 2009, and \$125.3 million at December 31, 2008.

Impaired loans are as follows:

	June 30, 2009	December 31, 2008
	(in thousands)	
Impaired loans with no allocated allowance	\$ 11,874	\$ 14,228
Impaired loans with an allocated allowance	86,345	76,960
Total impaired loans	\$ 98,219	\$ 91,188
Amount of allowance for loan losses allocated	\$ 17,461	\$ 16,788

Our average investment in impaired loans was approximately \$92.9 million and \$80.7 million for the six-month periods ended June 30, 2009 and 2008, respectively. Cash receipts on impaired loans on non-accrual status are generally applied to the principal balance. Interest income recognized on impaired loans during the first six months of 2009 and 2008 was approximately \$0.5 million in each period, the majority of which was received in cash.

7. Basic income per share includes weighted average common shares outstanding during the period and participating share awards (see note 2). Diluted income per share includes the dilutive effect of additional potential common shares to be issued upon the exercise of stock options and stock units for a deferred compensation plan for non-employee directors.

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

A reconciliation of basic and diluted earnings per share for the three-month and the six-month periods ended June 30 follows:

	Three months ended June 30,		Six months ended June 30,	
	2009	2008	2009	2008
	(in thousands, except per share amounts)			
Net income (loss) applicable to common stock	\$ (6,236)	\$ 3,346	\$ (25,908)	\$ 3,687
Shares outstanding	24,030	23,015	23,700	22,955
Effect of stock options		7		20
Stock units for deferred compensation plan for non-employee directors	72	58	68	61
Shares outstanding for calculation of diluted earnings per share	24,102	23,080	23,768	23,036
Net income (loss) per common share				
Basic	\$ (.26)	\$.15	\$ (1.09)	\$.16
Diluted ⁽¹⁾	(.26)	.14	(1.09)	.16

⁽¹⁾ For any period in which a loss is recorded, the assumed exercise of stock options and stock units for deferred compensation plan for non-employee directors would have an anti-dilutive impact on the loss per share and thus are ignored in the diluted per share calculation.

Weighted average stock options outstanding that were anti-dilutive totaled 1.6 million and 1.5 million for the three-months ended June 30, 2009 and 2008, respectively. During the six-month periods ended June 30, 2009 and 2008, weighted-average anti-dilutive stock options totaled 1.6 million and 1.5 million, respectively.

8. SFAS No. 133, Accounting for Derivative Instruments and Hedging Activities, (SFAS No. 133) which was subsequently amended by SFAS No. 138, requires companies to record derivatives on the balance sheet as assets and liabilities measured at their fair value. The accounting for increases and decreases in the value of derivatives depends upon the use of derivatives and whether the derivatives qualify for hedge accounting.

Our derivative financial instruments according to the type of hedge in which they are designated under SFAS No. 133 follows:

		June 30, 2009	
	Notional	Average	Fair
	Amount	Maturity	Value
		(years)	
		(dollars in thousands)	
Cash Flow Hedges			
Pay fixed interest-rate swap agreements	\$ 137,000	1.8	\$ (4,591)

	\$ 228,000	1.3	\$ (4,603)
No hedge designation			
Pay fixed interest-rate swap agreements	\$ 25,000	1.4	\$ (375)
Interest-rate cap agreements	80,000	1.5	208
Rate-lock mortgage loan commitments	38,840	0.1	578
Mandatory commitments to sell mortgage loans	103,904	0.1	872
Total	\$ 247,744	0.7	\$ 1,283

Table of Contents

NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)
(unaudited)

We have established management objectives and strategies that include interest-rate risk parameters for maximum fluctuations in net interest income and market value of portfolio equity. We monitor our interest rate risk position via simulation modeling reports. The goal of our asset/liability management efforts is to maintain profitable financial leverage within established risk parameters.

We use variable-rate and short-term fixed-rate (less than 12 months) debt obligations to fund a portion of our balance sheet, which exposes us to variability in interest rates. To meet our objectives, we may periodically enter into derivative financial instruments to mitigate exposure to fluctuations in cash flows resulting from changes in interest rates (Cash Flow Hedges). Cash Flow Hedges currently include certain pay-fixed interest-rate swaps and interest-rate cap agreements.

Through certain special purposes entities we issue trust preferred securities as part of our capital management strategy. Certain of these trust preferred securities are variable rate which exposes us to variability in cash flows . To mitigate our exposure to fluctuations in cash flows resulting from changes in interest rates, on approximately \$20.0 million of variable rate trust preferred securities, we entered into a pay-fixed interest-rate swap agreement in September, 2007.

Pay-fixed interest-rate swaps convert the variable-rate cash flows on debt obligations to fixed-rates. Under interest-rate cap agreements, we will receive cash if interest rates rise above a predetermined level. As a result, we effectively have variable-rate debt with an established maximum rate. We pay an upfront premium on interest rate caps which is recognized in earnings in the same period in which the hedged item affects earnings. Unrecognized premiums from interest rate caps aggregated to \$0.3 million and \$0.5 million at June 30, 2009 and December 31, 2008, respectively.

We record the fair value of Cash Flow Hedges in accrued income and other assets and accrued expenses and other liabilities. On an ongoing basis, we adjust our balance sheet to reflect the then current fair value of Cash Flow Hedges. The related gains or losses are reported in other comprehensive income and are subsequently reclassified into earnings, as a yield adjustment in the same period in which the related interest on the hedged items (primarily variable-rate debt obligations) affect earnings. It is anticipated that approximately \$2.8 million, of unrealized losses on Cash Flow Hedges at June 30, 2009 will be reclassified to earnings over the next twelve months. To the extent that the Cash Flow Hedges are not effective, the ineffective portion of the Cash Flow Hedges are immediately recognized as interest expense. The maximum term of any Cash Flow Hedge at June 30, 2009 is 5.5 years.

We also use long-term, fixed-rate brokered CDs to fund a portion of our balance sheet. These instruments expose us to variability in fair value due to changes in interest rates. To meet our objectives, we may enter into derivative financial instruments to mitigate exposure to fluctuations in fair values of such fixed-rate debt instruments (Fair Value Hedges). We had no Fair Value Hedges at June 30, 2009.

We record Fair Value Hedges at fair value in accrued income and other assets and accrued expenses and other liabilities. The hedged items (primarily fixed-rate debt obligations) are also recorded at fair value through the statement of operations, which offsets the adjustment to Fair Value Hedges. On an ongoing basis, we will adjust our balance sheet to reflect the then current fair value of both the Fair Value Hedges and the respective hedged items. To the extent that the change in value of the Fair Value Hedges do not offset the change in the value of the hedged items, the ineffective portion is immediately recognized as interest expense.

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

Certain financial derivative instruments are not designated as hedges. The fair value of these derivative financial instruments have been recorded on our balance sheet and are adjusted on an ongoing basis to reflect their then current fair value. The changes in the fair value of derivative financial instruments not designated as hedges, are recognized currently in earnings.

In the ordinary course of business, we enter into rate-lock mortgage loan commitments with customers (Rate Lock Commitments). These commitments expose us to interest rate risk. We also enter into mandatory commitments to sell mortgage loans (Mandatory Commitments) to reduce the impact of price fluctuations of mortgage loans held for sale and Rate Lock Commitments. Mandatory Commitments help protect our loan sale profit margin from fluctuations in interest rates. The changes in the fair value of Rate Lock Commitments and Mandatory Commitments are recognized currently as part of gains on the sale of mortgage loans. We obtain market prices on Mandatory Commitments and Rate Lock Commitments. Net gains on the sale of mortgage loans, as well as net income may be more volatile as a result of these derivative instruments, which are not designated as hedges.

The following table illustrates the impact that the derivative financial instruments discussed above have on individual line items in the Consolidated Statements of Financial Condition for the periods presented:

Fair Values of Derivative Instruments

	Asset Derivatives				Liability Derivatives			
	June 30, 2009		December 31, 2008		June 30, 2009		December 31, 2008

9. Intangible assets, net of amortization, were comprised of the following at June 30, 2009 and December 31, 2008:

	June 30, 2009		December 31, 2008	
	Gross Carrying Amount	Accumulated Amortization	Gross Carrying Amount	Accumulated Amortization
	(dollars in thousands)			
Amortized intangible assets				
Core deposit	\$ 31,326	\$ 20,225	\$ 31,326	\$ 19,381
Customer relationship	1,302	1,188	1,302	1,165
Covenants not to compete	1,520	1,520	1,520	1,412
Total	\$ 34,148	\$ 22,933	\$ 34,148	\$ 21,958
Unamortized intangible assets - Goodwill ⁽¹⁾	\$ 16,734		\$ 16,734	

⁽¹⁾ All goodwill is allocated to our Mepco reporting unit.

Amortization of intangibles has been estimated through 2014 and thereafter in the following table, and does not take into consideration any potential future acquisitions or branch purchases.

	(dollars in thousands)
Six months ended December 31, 2009	\$ 863
Year ending December 31:	
2010	1,310
2011	1,398
2012	1,115
2013	1,086
2014 and thereafter	5,443
Total	\$ 11,215

The goodwill of \$16.7 million at June 30, 2009 is at our Mepco reporting unit and the testing performed at that same date indicated that this goodwill was not impaired. Mepco had net income of \$9.6 million for the six-month period ended June 30, 2009 and \$10.7 million for the year ended December 31, 2008. Based primarily on Mepco's estimated future earnings, the fair value of this reporting unit (utilizing a discounted cash flow method) was determined to be in excess of its carrying value.

10. We maintain performance-based compensation plans that include a long-term incentive plan that permits the issuance of share based compensation, including stock options and non-vested share awards. This plan, which is shareholder approved, permits the grant of additional share based awards for up to 0.1 million shares of common stock as of June 30, 2009. We believe that such awards better align the interests of our officers and directors with those of our shareholders. Share based compensation awards are measured at fair value at the date of grant and are expensed over the requisite service period. Common shares issued upon exercise of stock options come from currently authorized but unissued shares.

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

Pursuant to our performance-based compensation plans we granted 0.3 million stock options to our officers on January 30, 2009. We also granted 0.2 million shares of non-vested common stock to these same individuals on January 16, 2008. The stock options have an exercise price equal to the market value on the date of grant, vest ratably over a three year period and expire 10 years from date of grant. The non-vested common stock cliff vests in five years. We use the market value of the common stock on date of grant to measure compensation cost for these non-vested share awards and the Black Scholes option pricing model to measure compensation cost for stock options. We also estimate expected forfeitures over the vesting period.

During the first quarter of 2008 we modified 0.1 million stock options originally issued in prior years for one former officer. These modified options vested immediately and the expense associated with this modification of \$0.01 million was included in compensation and benefits expense during the three month period ended March 31, 2008. The modification consisted of extending the date of exercise subsequent to resignation of the officer from 3 months to 12 months.

Total compensation cost recognized during the first six months of 2009 and 2008 for stock option and restricted stock grants was \$0.3 million in each period. The corresponding tax benefit relating to this expense was zero and \$0.1 million for the first six months of 2009 and 2008, respectively.

At June 30, 2009, the total expected compensation cost related to non-vested stock option and restricted stock awards not yet recognized was \$1.5 million. The weighted-average period over which this amount will be recognized is 2.7 years.

A summary of outstanding stock option grants and transactions follows:

		Six-months ended June 30, 2009		
	Number of Shares	Average Exercise Price	Weighted-Average Remaining Contractual Term (years)	Aggregated Intrinsic Value (in thousands)

A summary of non-vested restricted stock and transactions follows:

	2009	Weighted Average
	Number of Shares	Grant Date Fair Value
Outstanding at January 1, 2009	262,381	\$9.27
Granted		
Exercised		
Forfeited		
Outstanding at June 30, 2009	262,381	\$9.27

A summary of the weighted-average assumptions used in the Black-Scholes option pricing model for grants of stock options during 2009 follows:

Expected dividend yield	2.60%
Risk-free interest rate	2.59
Expected life (in years)	6.00
Expected volatility	58.39%
Per share weighted-average fair value	\$ 0.69

The risk-free interest rate for the expected term of the option is based on the U.S. Treasury yield curve in effect at the time of the grant. The expected life was obtained using a simplified method that, in general, averaged the vesting term and original contractual term of the stock option. This method was used as relevant historical data of actual exercise activity was not available. The expected volatility was based on historical volatility of our common stock.

The following summarizes certain information regarding stock options exercised during the three and six-month periods ending June 30:

	Three months ended June 30,		Six months ended June 30,	
	2009	2008	2009	2008
	(in thousands)			
Intrinsic value	\$	\$	\$	\$ 61
Cash proceeds received	\$	\$	\$	\$ 51
Tax benefit realized	\$	\$	\$	\$ 21

11. At both June 30, 2009 and December 31, 2008 we had approximately \$1.7 million of gross unrecognized tax benefits. If recognized, the entire amount of unrecognized tax benefits, net of \$0.4 million federal tax on state benefits, would affect our effective tax rate. We do not expect the total amount of unrecognized tax benefits to significantly increase or decrease during the balance of 2009.

The income tax provision (benefit) was \$(1.0) million and \$0.5 million for the three month periods ending June 30, 2009 and 2008, respectively and \$(0.7) million and \$(1.6) million for the six month periods ending June 30, 2009 and

2008, respectively. The benefit recognized during the three- and six-month periods in 2009 were the result of current period adjustments to other comprehensive income (OCI), net of state income tax expense and adjustments to the deferred tax asset valuation allowance.

Table of Contents

NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)
(unaudited)

Generally, the calculation for the income tax provision (benefit) does not consider the tax effects of changes in other comprehensive income, which is a component of shareholders' equity on the balance sheet. However, an exception is provided in certain circumstances, such as when there is a pre-tax loss from continuing operations. In such case, pre-tax income from other categories (such as changes in OCI) is included in the calculation of the tax provision for the current year. For the second quarter of 2009, this resulted in an income tax benefit of \$1.6 million.

12. SFAS No. 157 defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. SFAS No. 157 also establishes a fair value hierarchy which requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

The standard describes three levels of inputs that may be used to measure fair value:

Level 1: Valuation is based upon quoted prices for identical instruments traded in active markets. Level 1 instruments include securities traded on active exchange markets, such as the New York Stock Exchange, as well as U.S. Treasury securities that are traded by dealers or brokers in active over-the-counter markets.

Level 2: Valuation is based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, and model-based valuation techniques for which all significant assumptions are observable in the market. Level 2 instruments include securities traded in less active dealer or broker markets.

Level 3: Valuation is generated from model-based techniques that use at least one significant assumption not observable in the market. These unobservable assumptions reflect estimates of assumptions that market participants would use in pricing the asset or liability. Valuation techniques include use of option pricing models, discounted cash flow models and similar techniques.

We used the following methods and significant assumptions to estimate fair value:

Securities: Where quoted market prices are available in an active market, securities (trading or available for sale) are classified as level 1 of the valuation hierarchy. Level 1 securities include certain preferred stocks, trust preferred securities and mutual funds for which there are quoted prices in active markets. If quoted market prices are not available for the specific security, then fair values are estimated by (1) using quoted market prices of securities with similar characteristics, (2) matrix pricing, which is a mathematical technique used widely in the industry to value debt securities without relying exclusively on quoted prices for specific securities but rather by relying on the securities relationship to other benchmark quoted prices, or (3) a discounted cash flow analysis whose significant fair value inputs can generally be verified and do not typically involve judgment by management. These securities are classified as level 2 of the valuation hierarchy and include mortgage and other asset backed securities, municipal securities, certain trust preferred securities and one preferred stock security. Level 3 securities at June 30, 2009 consist of certain private label mortgage and asset backed securities whose fair values are estimated using an internal discounted cash flow analysis. The underlying loans within these securities include Jumbo (59%), Alt A (24%) and manufactured housing (17%). Except for the discount rate, the inputs used in this analysis can generally be verified and do not involve judgment by management. The discount rate used (an unobservable input) was established using a multi-factored matrix whose base rate was the yield on agency mortgage backed securities.

Table of Contents

NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)
(unaudited)

The analysis adds a spread to this base rate based on several credit related factors, including vintage, product, payment priority, credit rating and non performing asset coverage ratio. The assumptions used reflect what we believe market participants would use in pricing these assets. The unrealized losses at June 30, 2009 (\$7.2 million and included in accumulated other comprehensive loss) were not considered to be other than temporary as we continue to have satisfactory relationships between non-performing assets and subordination levels in each security and continue to receive principal reductions (see note 3).

Loans held for sale: The fair value of loans held for sale is based on mortgage backed security pricing for comparable assets.

Impaired loans: From time to time, certain loans are considered impaired and an allowance for loan losses is established. Loans for which it is probable that payment of interest and principal will not be made in accordance with the contractual terms of the loan agreement are considered impaired. Once a loan is identified as individually impaired, management measures impairment in accordance with SFAS No. 114, Accounting by Creditors for Impairment of a Loan, (SFAS #114). We measure our investment in an impaired loan based on one of three methods: the loan's observable market price, the fair value of the collateral or the present value of expected future cash flows discounted at the loan's effective interest rate. Those impaired loans not requiring an allowance represent loans for which the fair value of the expected repayments or collateral exceed the recorded investments in such loans. At June 30, 2009, substantially all of the total impaired loans were evaluated based on the fair value of the collateral. When the fair value of the collateral is based on an observable market price we record the impaired loan as nonrecurring Level 2. When the fair value of the collateral is based on an appraised value or when an appraised value is not available we record the impaired loan as nonrecurring Level 3.

Other real estate: At the time of acquisition, other real estate is recorded at fair value, less estimated costs to sell, which becomes the property's new basis. Subsequent write-downs to reflect declines in value since the time of acquisition may occur from time to time and are recorded in other expense in the consolidated statements of operations. The fair value of the property used at and subsequent to the time of acquisition is typically determined by a third party appraisal of the property (nonrecurring Level 3).

Capitalized mortgage loan servicing rights: The fair value of capitalized mortgage loan servicing rights is based on a valuation model that calculates the present value of estimated net servicing income. The valuation model incorporates assumptions that market participants would use in estimating future net servicing income. The valuation model inputs and results can be compared to widely available published industry data for reasonableness.

Derivatives: The fair value of derivatives, in general, is determined using a discounted cash flow model whose significant fair value inputs can generally be verified and do not typically involve judgment by management.

(unaudited)

Assets and liabilities measured at fair value were as follows:

	Fair Value Measure- ments	Fair Value Measurements Using		
		Quoted Prices in Active Markets for Identical Assets (Level 1)	Significant Other Observable Inputs (Level 2)	Significant Un- observable Inputs (Level 3)
(in thousands)				
June 30, 2009:				
Measured at Fair Value on a Recurring basis:				
Assets				
Trading securities	\$ 37	\$ 37		
Securities available for sale	196,658	1,876	\$ 150,444	\$ 44,338
Loans held for sale	66,436		66,436	
Derivatives (1)	1,658		1,658	
Liabilities				
Derivatives (2)	4,978		4,978	
Measured at Fair Value on a Non-recurring basis:				
Assets				
Capitalized mortgage loan servicing rights	9,581		9,581	
Impaired loans	68,884			68,884
Other real estate	29,230			29,230
December 31, 2008:				
Measured at Fair Value on a Recurring basis:				
Assets				
Trading securities	\$ 1,929	\$ 1,929		
Securities available for sale	215,412	5,275	\$ 210,137	
Loans held for sale	27,603		27,603	
Derivatives (1)	1,043		1,043	
Liabilities				
Derivatives (2)	6,536		6,536	
Measured at Fair Value on a Non-recurring basis:				
Assets				
Capitalized mortgage loan servicing rights	9,636		9,636	

Impaired loans	60,172	60,172
(1) Included in accrued income and other assets		
(2) Included in accrued expenses and other liabilities	23	

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

Changes in fair values for financial assets which we have elected the fair value option for the periods presented were as follows:

Changes in Fair Values for the Six-Month
Periods Ended June 30 for items Measured at
Fair Value Pursuant to Election of the Fair Value Option

	2009		Total Change in Fair Values Included in Current Period Earnings	2008		Total Change in Fair Values Included in Current Period Earnings
	Net Gains (Losses) on Assets Securities	Loans		Net Gains (Losses) on Assets Securities	Loans	
			(in thousands)			
Trading securities	\$ 938		\$ 938	\$ (2,049)		\$ (2,049)
Loans held for sale		\$ (285)	(285)		\$ 232	232

For those items measured at fair value pursuant to election of the fair value option, interest income is recorded within the Consolidated Statements of Operations based on the contractual amount of interest income earned on these financial assets and dividend income is recorded based on cash dividends.

The following represent impairment charges recognized during the six month period ended June 30, 2009 relating to assets measured at fair value on a non-recurring basis:

Capitalized mortgage loan servicing rights, whose individual strata are measured fair value had a carrying amount of \$9.6 million which is net of a valuation allowance of \$2.4 million at June 30, 2009 and had a carrying amount of \$12.0 million which is net of a valuation allowance of \$4.7 million at December 31, 2008. A recovery of \$3.0 million and \$2.3 million was included in our results of operations for the three and six month periods ending June 30, 2009, respectively and \$1.0 million and \$0.3 million during the same periods in 2008.

Loans which are measured for impairment using the fair value of collateral for collateral dependent loans, had a carrying amount of \$86.3 million, with a valuation allowance of \$17.5 million at June 30, 2009 and had a carrying amount of \$77.0 million, with a valuation allowance of \$16.8 million at December 31, 2008. An additional provision for loan losses relating to impaired loans of \$13.2 million and \$35.2 million was included in our results of operations for the three and six month periods ending June 30, 2009, respectively and \$8.1 million and \$17.1 million during the same periods in 2008.

Other real estate, which is measured using the fair value of the property, had a carrying amount of \$29.2 million which is net of a valuation allowance of \$3.4 million at June 30, 2009. An additional charge of \$1.9 million and \$3.2 million was included in our results of operations during the three and six month periods ended June 30, 2009.

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

A reconciliation for all assets and liabilities measured at fair value on a recurring basis using significant unobservable inputs (Level 3) for the six months ended June 30, follows:

	Securities Available for Sale	
	2009	2008
Beginning balance	\$ -	\$ 21,497
Total gains (losses) realized and unrealized:		
Included in results of operations		
Included in other comprehensive income	517	
Purchases, issuances, settlements, maturities and calls	(3,560)	(94)
Transfers in and/or out of Level 3	47,381	(10,028)
Ending balance	\$ 44,338	\$ 11,375

Amount of total gains (losses) for the period included in earnings attributable to the change in unrealized gains (losses) relating to assets still held at June 30	\$0	\$0
---	-----	-----

As discussed above, the \$47.4 million of securities available for sale transferred to a Level 3 valuation technique during the first quarter of 2009 consisted entirely of certain private label mortgage and asset backed securities. The market for these types of securities is extremely dislocated and Level 2 pricing has not generally been based on orderly transactions, rather the pricing could be described as based on distressed sales. As a result, we valued these securities using the internal model described above.

The following table reflects the difference between the aggregate fair value and the aggregate remaining contractual principal balance outstanding for loans held for sale for which the fair value option has been elected for the periods presented.

	Aggregate Fair Value	Difference (in thousands)	Contractual Principal
Loans held for sale			
June 30, 2009	\$66,436	\$397	\$66,039
December 31, 2008	27,603	682	26,921

13. Most of our assets and liabilities are considered financial instruments. Many of these financial instruments lack an available trading market and it is our general practice and intent to hold the majority of our financial instruments to maturity. Significant estimates and assumptions were used to determine the fair value of financial instruments. These estimates are subjective in nature, involving uncertainties and matters of judgment, and therefore, fair values cannot be determined with precision. Changes in assumptions could significantly affect the estimates.

Estimated fair values have been determined using available data and methodologies that are considered suitable for each category of financial instrument. For instruments with adjustable-interest rates which reprice frequently and without significant credit risk, it is presumed that estimated fair values approximate the recorded book balances.

Financial instrument assets actively traded in a secondary market, such as securities, have been valued using quoted market prices while recorded book balances have been used for cash and due from banks and accrued interest.

Table of Contents**NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)**
(unaudited)

The fair value of loans is calculated by discounting estimated future cash flows using estimated market discount rates that reflect credit and interest-rate risk inherent in the loans.

We have purchased a stable value wrap for our bank owned life insurance that permits a surrender of this investment at the greater of its fair market or book value.

Financial instrument liabilities with a stated maturity, such as certificates of deposit, have been valued based on the discounted value of contractual cash flows using a discount rate approximating current market rates for liabilities with a similar maturity.

Derivative financial instruments have principally been valued based on discounted value of contractual cash flows using a discount rate approximating current market rates.

Financial instrument liabilities without a stated maturity, such as demand deposits, savings, NOW and money market accounts, have a fair value equal to the amount payable on demand.

The estimated fair values and recorded book balances follow:

	June 30, 2009	
	Estimated Fair Value	Recorded Book Balance
	(In thousands)	
Assets		
Cash and due from banks	\$ 79,400	\$ 79,400
Trading securities	40	40
Securities available for sale	196,700	196,700
Federal Home Loan Bank and Federal Reserve Bank Stock	NA	27,900
Net loans and loans held for sale	2,354,600	2,443,100
Bank owned life insurance	45,700	45,700
Accrued interest receivable	10,000	10,000
Derivative financial instruments	1,700	1,700
Liabilities		
Deposits with no stated maturity	\$ 1,305,300	\$ 1,305,300
Deposits with stated maturity	1,074,800	1,063,600
Other borrowings	322,222	350,100
Accrued interest payable	4,400	4,400
Derivative financial instruments	5,000	5,000

The fair values for commitments to extend credit and standby letters of credit are estimated to approximate their aggregate book balance, which is nominal.

Fair value estimates are made at a specific point in time, based on relevant market information and information about the financial instrument. These estimates do not reflect any premium or discount that could result from offering for sale the entire holdings of a particular financial instrument.

Fair value estimates are based on existing on- and off-balance sheet financial instruments without attempting to estimate the value of anticipated future business, the value of future earnings attributable to off-balance sheet activities and the value of assets and liabilities that are not considered financial instruments.

Table of Contents

NOTES TO INTERIM CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (continued)
(unaudited)

Fair value estimates for deposit accounts do not include the value of the substantial core deposit intangible asset resulting from the low-cost funding provided by the deposit liabilities compared to the cost of borrowing funds in the market.

14. The results of operations for the three- and six-month period ended June 30, 2009, are not necessarily indicative of the results to be expected for the full year.

Table of Contents**Item 2.****Management's Discussion and Analysis
of Financial Condition and Results of Operations**

The following section presents additional information that may be necessary to assess our financial condition and results of operations. This section should be read in conjunction with our consolidated financial statements contained elsewhere in this report as well as our 2008 Annual Report on Form 10-K. The Form 10-K includes a list of risk factors that you should consider in connection with any decision to buy or sell our securities.

Results of Operations

Summary We incurred a net loss of \$5.2 million and a net loss applicable to common stock of \$6.2 million during the three months ended June 30, 2009, compared to net income of \$3.3 million during the comparable period in 2008. The 2009 loss is primarily due to increases in the provision for loan losses and non-interest expenses. These changes were partially offset by increases in net interest income and non-interest income.

We incurred a net loss of \$23.8 million and a net loss applicable to common stock of \$25.9 million during the six months ended June 30, 2009, compared to net income of \$3.7 million during the comparable period in 2008. The reasons for the changes in the year-to-date comparative periods are generally commensurate with the quarterly comparative periods.

Key performance ratios

	Three months ended June 30,		Six months ended June 30,	
	<u>2009</u>	<u>2008</u>	<u>2009</u>	<u>2008</u>
Net income (loss) (annualized) to ⁽¹⁾				
Average assets	(0.83)%	0.42%	(1.75)%	0.23%
Average equity	(22.98)	5.58	(44.24)	3.07
Net income (loss) per common share ⁽¹⁾				
Basic	\$(0.26)	\$0.15	\$(1.09)	\$0.16
Diluted	(0.26)	0.14	(1.09)	0.16

⁽¹⁾ For the three- and six-month periods ended June 30, 2009 these amounts are calculated using net loss applicable to common stock.

Net interest income Net interest income is the most important source of our earnings and thus is critical in evaluating our results of operations. Changes in our tax equivalent net interest income are primarily influenced by our level of interest-earning assets and the income or yield that we earn on those assets and the manner and cost of funding our interest-earning assets. Certain macro-economic factors can also influence our net interest income such as the level and direction of interest rates, the difference between short-term and long-term interest rates (the steepness of the yield curve) and the general strength of the economies in which we are doing business. Finally, risk management plays an important role in our level of net interest income. The ineffective management of credit risk and interest-rate risk in particular can adversely impact our net interest income.

Table of Contents

Tax equivalent net interest income increased by 4.6% to \$36.1 million and by 7.3% to \$71.2 million, respectively, during the three- and six-month periods in 2009 compared to 2008. These increases reflect a rise in our tax equivalent net interest income as a percent of average interest-earning assets (Net Yield) that was partially offset by a decrease in average interest-earning assets.

We review yields on certain asset categories and our net interest margin on a fully taxable equivalent basis. This presentation is not in accordance with generally accepted accounting principles (GAAP) but is customary in the banking industry. In this non-GAAP presentation, net interest income is adjusted to reflect tax-exempt interest income on an equivalent before-tax basis. This measure ensures comparability of net interest income arising from both taxable and tax-exempt sources. The adjustments to determine tax equivalent net interest income were \$0.6 million and \$1.3 million for the second quarters of 2009 and 2008, respectively, and were \$1.3 million and \$2.7 million for the first six months of 2009 and 2008, respectively. These adjustments were computed using a 35% tax rate.

Average interest-earning assets totaled \$2.755 billion and \$2.754 billion during the three- and six-month periods in 2009, respectively. The decreases in average interest-earning assets since 2008 are due primarily to declines in both loans and securities.

Our Net Yield increased by 57 basis points to 5.25% during the second quarter of 2009 and also by 71 basis points to 5.20% during the first six months of 2009 as compared to the like periods in 2008. The tax equivalent yield on average interest-earning assets declined, which primarily reflects low short-term interest rates that have resulted in variable rate loans and securities re-pricing and new loans being originated at lower rates as well as an increase in non-accrual loans. The decline in the tax equivalent yield on average interest-earning assets that otherwise would have been expected due to low short-term interest rates was partially offset by a change in loan mix (higher yielding finance receivables making up a greater percentage of loans) and the existence of floors on some variable rate commercial loans. The decrease in the tax equivalent yield on average interest-earning assets was more than offset by a decline in our interest expense as a percentage of average interest-earning assets (the cost of funds). The decrease in our cost of funds also reflects low short-term interest rates that have resulted in decreased rates on certain short-term and variable rate borrowings and on deposits.

Our tax equivalent net interest income is also adversely impacted by our level of non-accrual loans. In the second quarter and first six months of 2009 non-accrual loans averaged \$121.5 million and \$124.4 million, respectively compared to \$104.4 million and \$93.6 million, respectively for the same periods in 2008. In addition, in the second quarter and first six months of 2009 we reversed \$0.8 million and \$1.7 million, respectively, of accrued and unpaid interest on loans placed on non-accrual during each period compared to \$0.6 million and \$1.4 million, respectively during the same periods in 2008.

(2) Interest on tax-exempt loans and securities is presented on a fully tax equivalent basis assuming a marginal tax rate of 35%

Provision for loan losses The provision for loan losses was \$27.8 million and \$12.4 million during the three months ended June 30, 2009 and 2008, respectively. During the six-month periods ended June 30, 2009 and 2008, the provision was \$58.6 million and \$23.7 million, respectively. The provisions reflect our assessment of the allowance for loan losses taking into consideration factors such as loan mix, levels of non-performing and classified loans and loan net charge-offs. While we use relevant information to recognize losses on loans, additional provisions for related losses may be necessary based on changes in economic conditions, customer circumstances and other credit risk factors. (See Portfolio Loans and asset quality.) The elevated level of the provision for loan losses in all periods reflect higher levels of non-performing loans and loan net charge-offs. In addition, much of the \$3.3 million increase in Mepco s provision for loan losses in the first half of 2009 compared to the year ago period is due to industry issues and in particular certain sellers and marketers going out of business. (See Portfolio Loans and asset quality.)

Non-interest income Non-interest income is a significant element in assessing our results of operations. On a long-term basis we are attempting to grow non-interest income in order to diversify our revenues within the financial services industry. We regard net gains on mortgage

Table of Contents

loan sales as a core recurring source of revenue but they are quite cyclical and volatile. We regard net gains (losses) on securities as a non-operating component of non-interest income.

Non-interest income totaled \$21.0 million during the three months ended June 30, 2009, a \$6.9 million increase from the comparable period in 2008. This increase was primarily due to increases in gains on mortgage loans and securities and in mortgage loan servicing income. For the first six months of 2009 non-interest income totaled \$32.6 million, a \$9.0 million increase from the comparable period in 2008. The year to date changes are generally commensurate with the quarterly changes.

Non-Interest Income

	Three months ended June 30,		Six months ended June 30,	
	2009	2008	2009	2008
	(in thousands)			
Service charges on deposit accounts	\$ 6,321	\$ 6,164	\$ 11,828	\$ 11,811
Net gains (losses) on assets				
Mortgage loans	3,262	1,141	6,543	3,008
Securities	4,230	837	3,649	(1,326)
VISA check card interchange income	1,500	1,495	2,915	2,866
Mortgage loan servicing	2,349	1,528	1,507	1,205
Mutual fund and annuity commissions	539	644	992	1,068
Bank owned life insurance	355	484	756	962
Title insurance fees	732	384	1,341	801
Other	1,723	1,460	3,058	3,234
Total non-interest income	\$ 21,011	\$ 14,137	\$ 32,589	\$ 23,629

Service charges on deposit accounts increased slightly during the three- and six-month periods ended June 30, 2009, respectively, from the comparable periods in 2008. The modest growth in such service charges primarily reflect a slight increase in NSF occurrences in 2009.

Net gains on the sale of mortgage loans increased significantly on both a quarterly and a year to date basis. The increase in gains relates primarily to a sharp increase in mortgage loan origination volume, loan sales and commitments to originate mortgage loans that are held for sale. This was due to a significant rise in refinancing activity resulting from generally lower mortgage loan interest rates during the first half of 2009. Due to a rise in mortgage loan interest rates in June 2009, mortgage loan refinancing activity has recently moderated and as a result, we would presently expect a lower level of gains on the sale of mortgage loans in the second half of 2009 as compared to our first half levels.

Table of Contents**Mortgage Loan Activity**

	Three months ended		Six months ended	
	June 30,		June 30,	
	2009	2008	2009	2008
	(in thousands)			
Mortgage loans originated	\$ 196,927	\$ 111,316	\$ 351,535	\$ 229,558
Mortgage loans sold	158,173	80,238	300,809	164,687
Mortgage loans sold with servicing rights released	9,174	11,660	14,603	19,542
Net gains on the sale of mortgage loans	3,262	1,141	6,543	3,008
Net gains as a percent of mortgage loans sold (Loan Sale Margin)	2.06%	1.42%	2.18%	1.83%
SFAS #133/#159 adjustments included in the Loan Sale Margin	0.04	(0.25)	0.33	0.38

The volume of loans sold is dependent upon our ability to originate mortgage loans as well as the demand for fixed-rate obligations and other loans that we cannot profitably fund within established interest-rate risk parameters. (See Portfolio Loans and asset quality.) Net gains on mortgage loans are also dependent upon economic and competitive factors as well as our ability to effectively manage exposure to changes in interest rates. As a result, this category of revenue can be quite cyclical and volatile.

Securities gains totaled \$4.2 million during the three months ended June 30, 2009, compared to \$0.8 million for comparable period in 2008. The second quarter 2009 securities gains were primarily due to increases in the fair value and gains on the sale of Bank of America preferred stock. We sold all of this preferred stock in June 2009. The gains in the year ago quarter primarily related to the sale of municipal securities. The sale of certain municipal securities in the second quarter of 2008 was initiated in order to reduce the mix of tax-exempt securities and to begin a process of selectively deleveraging the balance sheet in order to preserve regulatory capital ratios.

Securities gains totaled \$3.6 million during the first six months of 2009. We incurred securities losses of \$0.6 million in the first quarter of 2009 due to declines in the fair value of trading securities of \$0.8 million that were partially offset by \$0.2 million of securities gains due principally to the sale of municipal securities. During the first six months of 2008 we recorded securities losses of \$1.3 million. This loss was due to a decline in the fair value of preferred stocks classified as trading securities that was partially offset by the aforementioned gain on the sale of municipal securities.

VISA check card interchange income increased modestly in 2009 compared to 2008. These results can primarily be attributed to a rise in the frequency of use of our VISA check card product by our customer base. We have in place a rewards program for our VISA check card customers to encourage greater use of this product.

Mortgage loan servicing generated income of \$2.3 million and \$1.5 million in the second quarter and first six months of 2009 respectively, compared to \$1.5 million and \$1.2 million in the corresponding periods of 2008, respectively. These variances are primarily due to changes in the impairment reserve on and the amortization of capitalized mortgage loan servicing rights. The period end impairment reserve is based on a valuation of our mortgage loan servicing portfolio and the amortization is primarily impacted by prepayment activity.

Table of Contents

Activity related to capitalized mortgage loan servicing rights is as follows:

Capitalized Mortgage Loan Servicing Rights

	Three months ended		Six months ended	
	June 30,		June 30,	
	2009	2008	2009	2008
	(in thousands)			
Balance at beginning of period	\$ 11,589	\$ 15,297	\$ 11,966	\$ 15,780
Originated servicing rights capitalized	1,624	754	3,123	1,632
Amortization	(1,640)	(496)	(2,819)	(1,132)
Decrease in impairment reserve	2,965	996	2,268	271
Balance at end of period	\$ 14,538	\$ 16,551	\$ 14,538	\$ 16,551
Impairment reserve at end of period	\$ 2,383	\$ 48	\$ 2,383	\$ 48

At June 30, 2009 we were servicing approximately \$1.66 billion in mortgage loans for others on which servicing rights have been capitalized. This servicing portfolio had a weighted average coupon rate of approximately 5.85% and a weighted average service fee of 25.8 basis points. Remaining capitalized mortgage loan servicing rights at June 30, 2009 totaled \$14.5 million and had an estimated fair market value of \$15.3 million.

Mutual fund and annuity commissions declined in 2009 compared to 2008 due to lower sales of these products primarily reflecting customer uncertainty about the economy and concerns about the volatility of the equities market. Income from bank owned life insurance decreased in 2009 compared to 2008 primarily due to a reduced crediting rate reflecting the decline in interest rates, particularly on mortgage-backed securities.

The significant increases in title insurance fees in 2009 compared to 2008 primarily reflect the changes in our mortgage loan origination volumes.

Other non-interest income in the second quarter of 2009 includes \$0.5 million related to foreign currency transaction gains associated with Canadian dollar denominated finance receivables. The Canadian dollar appreciated significantly compared to the US dollar in the second quarter of 2009. Other non-interest income for the first six months of 2008 includes first quarter revenue of \$0.4 million from the redemption of 8,551 shares of Visa, Inc. Class B Common Stock as part of the Visa initial public offering.

Non-interest expense Non-interest expense is an important component of our results of operations. Historically, we primarily focused on revenue growth, and while we strive to efficiently manage our cost structure, our non-interest expenses generally increased from year to year because we expanded our operations through acquisitions and by opening new branches and loan production offices. Because of the current challenging economic environment that we are confronting, our expansion through acquisitions or by opening new branches is unlikely in the near term. Further, management is focused on a number of initiatives to reduce and contain non-interest expenses.

Table of Contents

Non-interest expense increased by \$3.7 million to \$34.8 million and by \$6.8 million to \$68.2 million during the three- and six-month periods ended June 30, 2009, respectively, compared to the like periods in 2008. These increases are primarily due to higher loan and collection costs and FDIC deposit insurance costs and losses on other real estate and repossessed assets.

Total non-interest expense	\$ 34,842	\$ 31,191	\$ 68,233	\$ 61,442

The decreases in compensation and employee benefits in 2009 compared to 2008 are primarily due to the elimination of any accruals for bonuses and the elimination of any contribution to the employee stock ownership plan. In addition, the deferral (as direct loan origination costs) of compensation and benefits has increased in 2009 as a result of the rise in mortgage loan origination activity. These compensation cost reductions were partially offset by additional staff added during 2009 to manage non-performing assets and loan collections.

The increases in loan and collection costs and losses on other real estate and repossessed assets resulted principally from the elevated level of non-performing assets and lower residential housing prices. (See Portfolio Loans and asset quality.)

Occupancy costs have declined in 2009 compared to the year-ago periods due primarily to the closure of some loan production offices during the last half of 2008.

Data processing expenses increased in 2009 primarily related to consulting fees paid to our core data processing services provider related to a revenue enhancement and cost efficiency project.

Table of Contents

Deposit insurance expense increased in 2009 compared to the year-ago periods reflecting higher rates and an industry-wide special assessment of \$1.4 million in the second quarter of 2009. This special assessment was equal to 5 basis points on total assets less Tier 1 capital.

As a Federal Deposit Insurance Corporation (FDIC) insured institution, we are required to pay deposit insurance premium assessments to the FDIC. Under the FDIC 's risk-based assessment system for deposit insurance premiums, all insured depository institutions are placed into one of four categories and assessed insurance premiums based primarily on their level of capital and supervisory evaluations. Insurance assessments ranged from 0.12% to 0.50% of total deposits for the first quarter 2009 assessment. Effective April 1, 2009, insurance assessments ranged from 0.07% to 0.78%, depending on an institution 's risk classification and other factors.

Credit card and bank service fees have increased due primarily to an increase in payment plans/finance receivables being administered by Mepco.

Advertising expense was higher in 2009 compared to 2008 due primarily to additional direct mail promotions of our checking account and VISA check card products.

Other expenses in the second quarter and first six months of 2008 include \$0.2 million for the settlement of two litigation matters at Mepco and an accrual of \$0.3 million for a potential liability at Independent Bank related to the withdrawal of funds from a deposit account in response to a tax levy. We have initially prevailed in court on the latter matter but the plaintiff can appeal this ruling so we have left the accrual intact at June 30, 2009.

Income tax expense (benefit) The income tax provision (benefit) was \$(1.0) million and \$0.5 million for the three month periods ending June 30, 2009 and 2008, respectively and \$(0.7) million and \$(1.6) million for the six month periods ending June 30, 2009 and 2008, respectively. The benefit recognized during the three- and six-month periods in 2009 were the result of current period adjustments to other comprehensive income (OCI), net of state income tax expense and adjustments to the deferred tax asset valuation allowance.

Generally, the calculation for the income tax provision (benefit) does not consider the tax effects of changes in other comprehensive income, which is a component of shareholders ' equity on the balance sheet. However, an exception is provided in certain circumstances, such as when there is a pre-tax loss from continuing operations. In such case, pre-tax income from other categories (such as changes in OCI) is included in the calculation of the tax provision for the current year. For the second quarter of 2009, this resulted in an income tax benefit of \$1.6 million.

Financial Condition

Summary Our total assets increased by \$20.4 million during the first six months of 2009 due primarily to a rise in loans held for sale. Loans, excluding loans held for sale (Portfolio Loans), totaled \$2.442 billion at June 30, 2009, down \$17.6 million from December 31, 2008. (See Portfolio Loans and asset quality.)

Deposits totaled \$2.369 billion at June 30, 2009, compared to \$2.066 billion at December 31, 2008. The \$302.4 million rise in total deposits during the period is due to increases in checking and savings accounts and brokered certificates of deposit (Brokered CDs). Other borrowings totaled \$257.3 million at June 30, 2009, a decrease of \$284.7 million from December 31, 2008.

Table of Contents

This decrease reflects the payoff of borrowings from the Federal Reserve Bank or Federal Home Loan Bank of Indianapolis with funds from the aforementioned rise in deposits.

Securities We maintain diversified securities portfolios, which include obligations of U.S. government-sponsored agencies, securities issued by states and political subdivisions, corporate securities, mortgage-backed securities and asset-backed securities. We also invest in capital securities, which include preferred stocks and trust preferred securities. We regularly evaluate asset/liability management needs and attempt to maintain a portfolio structure that provides sufficient liquidity and cash flow. We believe that the unrealized losses on securities available for sale are temporary in nature and are expected to be recovered within a reasonable time period. We believe that we have the ability to hold securities with unrealized losses to maturity or until such time as the unrealized losses reverse. (See Asset/liability management.)

Securities

	Amortized Cost	Unrealized		Fair Value
		Gains	Losses	
		(in thousands)		
Securities available for sale				
June 30, 2009	\$206,836	\$2,670	\$12,848	\$196,658
December 31, 2008	231,746	3,707	20,041	215,412

Securities available for sale declined during the first six months of 2009 because maturities and principal payments in the portfolio were not fully replaced with new purchases.

Effective January 1, 2008, we elected to measure the majority of our preferred stock investments at fair value pursuant to SFAS #159. We recorded a \$0.02 million other than temporary impairment charge on a trust preferred security in the first six months of 2009 and we did not record any other than temporary impairment charges on any investment securities during the first six months of 2008.

Sales of securities were as follows (See Non-interest income.):

	Three months ended		Six months ended

Table of Contents

Portfolio Loans and asset quality In addition to the communities served by our bank branch network, our principal lending markets also include nearby communities and metropolitan areas. Subject to established underwriting criteria, we also participate in commercial lending transactions with certain non-affiliated banks and may also purchase mortgage loans from third-party originators.

The senior management and board of directors of our bank retain authority and responsibility for credit decisions and we have adopted uniform underwriting standards. Our loan committee structure and the loan review process, attempt to provide requisite controls and promote compliance with such established underwriting standards. There can be no assurance that the aforementioned lending procedures and the use of uniform underwriting standards will prevent us from the possibility of incurring significant credit losses in our lending activities and in fact the provision for loan losses increased in the first half of 2009 as well as in 2008 and 2007 from prior historical levels.

Our 2003 acquisition of Mepco added financing of insurance premiums for businesses and the administration of payment plans to purchase vehicle service contracts for consumers (finance receivables) to our business activities. In January 2007 we sold Mepco's insurance premium finance business. Mepco conducts its activities across the United States and just recently also entered Canada. Mepco generally does not evaluate the creditworthiness of the individual customer but instead primarily relies on the payment plan collateral (the unearned vehicle service contract and unearned sales commission) in the event of default. As a result, we have established and monitor counterparty concentration limits in order to manage our collateral exposure. The counterparty concentration limits are primarily based on the AM Best rating and statutory surplus level for an insurance company and on other factors, including financial evaluation and distribution of concentrations, for administrators and sellers/dealers. The sudden failure of one of Mepco's major counterparties (an insurance company, administrator, or seller/dealer) could expose us to significant losses.

Mepco has established procedures for payment plan servicing/administration and collections, including the timely cancellation of the vehicle service contract, in order to protect our collateral position in the event of default. Mepco also has established procedures to attempt to prevent and detect fraud since the payment plan origination activities and initial customer contact is entirely done through unrelated third parties (vehicle service contract administrators and sellers or automobile dealerships). There can be no assurance that the aforementioned risk management policies and procedures will prevent us from the possibility of incurring significant credit or fraud related losses in this business segment.

Several marketers and sellers of the vehicle service contracts, including companies to which Mepco has provided financing, have been sued or are under investigation for alleged violations of telemarketing laws and other consumer protection laws. The actions have been brought primarily by state attorneys general and the Federal Trade Commission (FTC) but there have also been class action and other private lawsuits filed. In some cases, the companies have been placed into receivership or have discontinued business. In addition, the allegations, particularly those relating to blatantly abusive telemarketing practices by a relatively small number of marketers, have resulted in a significant amount of negative publicity that has affected or may in the future affect sales throughout the industry. It is possible these events could also cause federal or state lawmakers to enact legislation to further regulate the industry. These events could have an adverse impact on Mepco in several ways. First, Mepco will face increased credit risk with respect to certain counterparties which could result in higher provisions for loan losses if these counterparties go out of business. In addition, if any federal or state investigation is expanded to include finance companies such as Mepco, Mepco will face additional legal and other expenses in connection with any such investigation. An increased level of private actions in which Mepco is named as a defendant will also cause Mepco to incur additional legal expenses as well as potential liability. Finally, Mepco has incurred and will likely continue to incur additional legal and other expenses in general in dealing with these industry problems.

We generally retain loans that may be profitably funded within established risk parameters. (See Asset/liability management.) As a result, we may hold adjustable-rate and balloon real estate mortgage loans as Portfolio Loans, while 15- and 30-year, fixed-rate obligations are generally sold to mitigate exposure to changes in interest rates. (See Non-interest income.)

Future growth of overall Portfolio Loans is dependent upon a number of competitive and economic factors. Overall loan growth has slowed during the past two years reflecting both weak economic conditions in Michigan as well as a

very competitive pricing climate. However, finance receivables (vehicle service contract payment plans) have been growing. This growth reflects both increased sales efforts as well as our ability to focus solely on this line of business at Mepeco following the sale of our insurance premium finance business in January 2007.

Table of Contents

Construction and land development loans have been declining recently because we are seeking to shrink this portion of our Portfolio Loans due to a very poor economic climate for real estate development, particularly residential real estate. Declines in Portfolio Loans or continuing competition that leads to lower relative pricing on new Portfolio Loans could adversely impact our future operating results. We continue to view loan growth consistent with established quality and profitability standards as a major short and long-term challenge.

Non-performing assets

	June 30, 2009	December 31, 2008
	(dollars in thousands)	
Non-accrual loans	\$ 119,580	\$ 122,639
Loans 90 days or more past due and still accruing interest	5,700	2,626
	Total non-performing loans	125,280
Other real estate	29,760	19,998
	Total non-performing assets	\$ 155,040
		\$ 145,263
As a percent of Portfolio Loans		
Non-performing loans	5.13%	5.09%
Allowance for loan losses	2.67	2.35
Non-performing assets to total assets	5.21	4.91
Allowance for loan losses as a percent of non-performing loans	52	46

Non-performing loans are relatively unchanged since year-end 2008. An increase in non-performing residential mortgage loans was offset by a decline in non-performing commercial real estate loans. The decline in non-performing commercial real estate loans is primarily due to net charge-offs and the payoff or other disposition of non-performing credits during the first half of 2009. Non-performing commercial real estate loans largely reflect delinquencies caused by cash flow difficulties encountered by real estate developers in Michigan as they confront a significant decline in sales of real estate. The elevated level of non-performing residential mortgage loans is primarily due to a rise in delinquencies and foreclosures reflecting both weak economic conditions and soft residential real estate values in many parts of Michigan.

Other real estate (ORE) and repossessed assets totaled \$29.8 million at June 30, 2009, compared to \$20.0 million at December 31, 2008. This increase is the result of the migration of non-performing loans secured by real estate into ORE as the foreclosure process is completed and any redemption period expires. Higher foreclosure rates are evident nationwide, but Michigan has consistently had one of the higher foreclosure rates in the U.S. during the past year. We believe that this higher foreclosure rate is due to both weak economic conditions (Michigan has the highest unemployment rate in the U.S.) and declining residential real estate values (which has eroded or eliminated the equity that many mortgagors had in their home). Because the redemption period on foreclosures is relatively long in Michigan (six months to one year) and we have many non-performing loans that were in the process of foreclosure at June 30, 2009, we anticipate that our level of other real estate and repossessed assets will continue to rise during 2009 and will likely remain at elevated levels for some period of time. A high level of non-performing assets would be expected to adversely impact our tax equivalent net interest income.

Table of Contents

We will place a loan that is 90 days or more past due on non-accrual, unless we believe the loan is both well secured and in the process of collection. Accordingly, we have determined that the collection of the accrued and unpaid interest on any loans that are 90 days or more past due and still accruing interest is probable.

The ratio of loan net charge-offs to average loans was 4.23% on an annualized basis in the first half of 2009 (or \$51.4 million) compared to 1.43% in the first half of 2008 (or \$18.1 million). The rise in loan net charge-offs primarily reflects increases of \$22.6 million for commercial loans and \$6.7 million for residential mortgage loans. These increases in loan net charge-offs primarily reflect higher levels of non-performing assets and lower collateral liquidation values, particularly on residential real estate or real estate held for development. We do not believe that the elevated level of loan net charge-offs in the first half of 2009 is indicative of what we will experience during the balance of 2009 and beyond. The majority of the first half 2009 loan net charge-offs related to commercial loans and in particular several land or land development loans (due to significant drops in real estate values) and one large commercial credit (which defaulted in March 2009). Land and land development loans now total just \$66.4 million (or 2.2% of total assets) and approximately 56% of these loans are already in non-performing or watch credit status and the entire portfolio has been carefully evaluated and an appropriate allowance or charge-off has been recorded. Further, the commercial loan portfolio is thoroughly analyzed each quarter through our credit review process and an appropriate allowance and provision for loan losses is recorded based on such review and in light of prevailing market conditions.

4.23%

1.43%

In determining the allowance and the related provision for credit losses, we consider four principal elements: (i) specific allocations based upon probable losses identified during the review of the loan portfolio, (ii) allocations established for other adversely rated loans, (iii) allocations based principally on historical loan loss experience, and (iv) additional allowances based on subjective factors, including local and general economic business factors and trends, portfolio concentrations and changes in the size, mix and/or the general terms of the loan portfolios.

The first element reflects our estimate of probable losses based upon our systematic review of specific loans. These estimates are based upon a number of objective factors, such as payment history, financial condition of the borrower, and discounted collateral exposure.

Table of Contents

The second element reflects the application of our loan rating system. This rating system is similar to those employed by state and federal banking regulators. Loans that are rated below a certain predetermined classification are assigned a loss allocation factor for each loan classification category that is based upon a historical analysis of both the probability of default and the expected loss rate (loss given default). The lower the rating assigned to a loan or category, the greater the allocation percentage that is applied. For higher rated loans (non-watch credit) we again determine a probability of default and loss given default in order to apply an allocation percentage.

The third element is determined by assigning allocations to homogeneous loan groups based principally upon the five-year average of loss experience for each type of loan. Recent years are weighted more heavily in this average. Average losses may be further adjusted based on an analysis of delinquent loans. Loss analyses are conducted at least annually.

The fourth element is based on factors that cannot be associated with a specific credit or loan category and reflects our attempt to ensure that the overall allowance for loan losses appropriately reflects a margin for the imprecision necessarily inherent in the estimates of expected credit losses. We consider a number of subjective factors when determining the unallocated portion, including local and general economic business factors and trends, portfolio concentrations and changes in the size, mix and the general terms of the loan portfolios. (See Provision for credit losses.)

Mepco s allowance for loan losses is determined in a similar manner as discussed above and primarily takes into account historical loss experience, unsecured exposure, and other subjective factors deemed relevant to their lending activities.

The allowance for loan losses increased to 2.67% of total Portfolio Loans at June 30, 2009 from 2.35% at December 31, 2008. This increase is primarily due to increases in all of the components of the allowance for loan losses outlined above. The allowance for loan losses related to specific loans increased due to some larger reserves on some individual credits even though total non-performing commercial loans have declined since year end 2008. The allowance for loan losses related to other adversely rated loans increased primarily due to changes in the mix of commercial loan ratings. The allowance for loan losses related to historical losses increased due to higher loan net charge-offs. Finally, the allowance for loan losses related to subjective factors increased primarily due to weaker economic conditions in Michigan that have contributed to higher levels of non-performing loans and net loan charge-offs.

Allocation of the Allowance for Loan Losses

	June 30, 2009	December 31, 2008
	(in thousands)	
Specific allocations	\$17,461	\$ 16,788
Other adversely rated loans	11,492	9,511
Historical loss allocations	22,830	20,270
Additional allocations based on subjective factors	13,488	11,331
	\$65,271	\$ 57,900

Table of Contents

We took a variety of steps beginning in 2007 to address the credit issues identified above (elevated levels of watch credits, non-performing loans and other real estate and repossessed assets), including the following:

- § An enhanced quarterly watch credit review process to proactively manage higher risk loans.
- § Loan risk ratings are independently assigned and structure recommendations made upfront by our credit officers.
- § A Special Assets Group has been established to provide more effective management of our most troubled loans. A select group of law firms supports this team, providing professional advice and systemic feedback.
- § An independent loan review function provides portfolio/individual loan feedback to evaluate the effectiveness of processes by market.
- § Management (incentive) objectives for each commercial lender and senior commercial lender emphasize credit quality in addition to growth and profitability.
- § Portfolio concentrations are monitored with select loan types encouraged and other loan types (such as residential real estate development) requiring significantly higher approval authorities.

Deposits and borrowings Our competitive position within many of the markets served by our branch network limits our ability to materially increase deposits without adversely impacting the weighted-average cost of core deposits. Accordingly, we principally compete on the basis of convenience and personal service, while employing pricing tactics that are intended to enhance the value of core deposits.

To attract new core deposits, we have implemented a high-performance checking program that utilizes a combination of direct mail solicitations, in-branch merchandising, gifts for customers opening new checking accounts or referring business to our bank and branch staff sales training. This program has historically generated increases in customer relationships as well as deposit service charges. Over the past two to three years we have also expanded our treasury management products and services for commercial businesses and municipalities or other governmental units and have also increased our sales calling efforts in order to attract additional deposit relationships from these sectors. Despite these efforts our historic core deposit growth has not kept pace with the historic growth of our Portfolio Loans. We view long-term core deposit growth as a significant challenge. Core deposits generally provide a more stable and lower cost source of funds than alternative sources such as short-term borrowings. As a result, the continued funding of Portfolio Loan growth with alternative sources of funds (as opposed to core deposits) may erode certain of our profitability measures, such as return on assets, and may also adversely impact our liquidity. (See Liquidity and capital resources.)

We have also implemented strategies that incorporate federal funds purchased, other borrowings and Brokered CDs to fund a portion of any increases in interest earning assets. The use of such alternate sources of funds supplements our core deposits and is also an integral part of our

Table of Contents

asset/liability management efforts. Changes between the various categories of our alternative sources of funds will generally reflect pricing conditions.

Alternative Sources of Funds

	Amount	June 30, 2009 Average Maturity	Rate	Amount	December 31, 2008 Average Maturity	Rate
(dollars in thousands)						
Brokered CDs	\$ 480,173	2.0 years	2.67%	\$ 182,283	1.1 years	3.63%
Fixed rate FHLB advances	210,616	1.5 years	1.90	314,214	2.3 years	3.49
Securities sold under agreements to Repurchase	35,000	1.4 years	4.42	35,000	1.9 years	4.42
FRB Discount borrowing	8,200	.2 years	0.50	189,500	.1 years	0.54
Federal funds purchased				750	1 day	0.25
Total	\$ 733,989	1.8 years	2.51%	\$ 721,747	1.4 years	2.80%

Other borrowed funds, principally advances from the Federal Home Loan Bank (the FHLB), borrowings from the Federal Reserve Bank (the FRB) and securities sold under agreements to repurchase (Repurchase Agreements), totaled \$257.3 million at June 30, 2009, compared to \$542.0 million at December 31, 2008. The \$284.7 million decrease in other borrowed funds principally reflects the payoff of borrowings from the FRB and FHLB with funds from new Brokered CDs or from the growth in other deposits.

Derivative financial instruments are employed to manage our exposure to changes in interest rates. (See Asset/liability management.) At June 30, 2009, we employed interest-rate swaps with an aggregate notional amount of \$162.0 million and interest rate caps with an aggregate notional amount of \$171.0 million. (See note #8 of Notes to Interim Consolidated Financial Statements.)

Liquidity and capital resources Liquidity risk is the risk of being unable to timely meet obligations as they come due at a reasonable funding cost or without incurring unacceptable losses. Our liquidity management involves the measurement and monitoring of a variety of sources and uses of funds. Our Consolidated Statements of Cash Flows categorize these sources and uses into operating, investing and financing activities. We primarily focus our liquidity management on developing access to a variety of borrowing sources to supplement our deposit gathering activities and provide funds for growing our investment and loan portfolios as well as to be able to respond to unforeseen liquidity needs.

Our sources of funds include our deposit base, secured advances from the FHLB, secured borrowings from the FRB, a federal funds purchased borrowing facility with another commercial bank, and access to the capital markets (for Brokered CDs).

At June 30, 2009 we had \$560.6 million of time deposits that mature in the next twelve months. Historically, a majority of these maturing time deposits are renewed by our customers or are Brokered CDs that we expect to replace. Additionally \$1.305 billion of our deposits at June 30, 2009 were in account types from which the customer could withdraw the funds on demand. Changes in the balances of deposits that can be withdrawn upon demand are usually predictable

Table of Contents

and the total balances of these accounts have generally grown or have been stable over time as a result of our marketing and promotional activities. There can be no assurance that historical patterns of renewing time deposits or overall growth in deposits will continue in the future.

In particular, media reports about bank failures have created concerns among depositors at banks throughout the country, including certain of our customers, particularly those with deposit balances in excess of deposit insurance limits. In response, the FDIC announced several programs during 2008 including increasing the deposit insurance limit from \$100,000 to \$250,000 at least until December 31, 2013 and providing unlimited deposit insurance for balances in non-interest bearing demand deposit and certain low-interest (an interest rate of 0.50% or less) transaction accounts until December 31, 2009 (there is currently a proposal from the FDIC to extend this date by six months). We have proactively sought to provide appropriate information to our deposit customers about our organization in order to retain our business and deposit relationships. Despite these moves by the FDIC and our proactive communications efforts, the potential outflow of deposits remains as a significant liquidity risk, particularly since our recent losses and our elevated level of non-performing assets have reduced some of the financial ratings of our bank that are followed by our larger deposit customers, such as municipalities. The outflow of significant amounts of deposits could have an adverse impact on our liquidity and results of operations.

We have developed contingency funding plans that stress tests our liquidity needs that may arise from certain events such as an adverse credit event, rapid loan growth or a disaster recovery situation. Our liquidity management also includes periodic monitoring that segregates assets between liquid and illiquid and classifies liabilities as core and non-core. This analysis compares our total level of illiquid assets to our core funding. It is our goal to have core funding sufficient to finance illiquid assets.

Effective management of capital resources is critical to our mission to create value for our shareholders. The cost of capital is an important factor in creating shareholder value and, accordingly, our capital structure includes cumulative trust preferred securities and cumulative preferred stock.

We have four special purpose entities that have issued \$90.1 million of cumulative trust preferred securities outside of Independent Bank Corporation. Currently \$64.6 million of these securities qualify as Tier 1 capital and the balance qualify as Tier 2 capital. These entities have also issued common securities and capital to Independent Bank Corporation. Independent Bank Corporation, in turn, issued subordinated debentures to these special purpose entities equal to the trust preferred securities, common securities and capital issued. The subordinated debentures represent the sole asset of the special purpose entities. The common securities, capital and subordinated debentures are included in our Consolidated Statements of Financial Condition at June 30, 2009 and December 31, 2008.

In March 2006, the Federal Reserve Board issued a final rule that retains trust preferred securities in the Tier 1 capital of bank holding companies. After a transition period that originally was going to end on March 31, 2009 but that has recently been extended an additional two years (to March 31, 2011), the aggregate amount of trust preferred securities and certain other capital elements will be limited to 25 percent of Tier 1 capital elements, net of goodwill (net of any associated deferred tax liability). The amount of trust preferred securities and certain other elements in excess of the limit could be included in the Tier 2 capital, subject to restrictions. Based upon our existing levels of Tier 1 capital, trust preferred securities and goodwill, this final

Table of Contents

Federal Reserve Board rule would have reduced our Tier 1 capital to average assets ratio by approximately 29 basis points at June 30, 2009, (this calculation assumes no transition period).

In December 2008, we issued 72,000 shares of Series A, no par value, \$1,000 liquidation preference, fixed rate cumulative perpetual preferred stock (Preferred Stock) and a warrant to purchase 3,461,538 shares (at \$3.12 per share) of our common stock (Warrant) to the U.S. Department of Treasury (UST) in return for \$72.0 million under the Capital Purchase Program (CPP) component of the Troubled Asset Relief Program (TARP). Of the total proceeds, \$68.4 million was originally allocated to the Preferred Stock and \$3.6 million was allocated to the Warrant (included in capital surplus) based on the relative fair value of each. The \$3.6 million discount on the Preferred Stock is being accreted using an effective yield method over five years. The accretion is being recorded as part of the Preferred Stock dividend.

The Preferred Stock pays a quarterly, cumulative cash dividend at a rate of 5% per annum on the \$1,000 liquidation preference to, but excluding February 15, 2014 and at a rate of 9% per annum thereafter. We are subject to various regulatory policies and requirements relating to the payment of dividends, including requirements to maintain adequate capital above regulatory minimums. So long as any shares of Preferred Stock remain outstanding, unless all accrued and unpaid dividends for all prior dividend periods have been paid or are contemporaneously declared and paid in full, no dividend whatsoever may be paid or declared on our common stock or other junior stock, other than a dividend payable solely in common stock and other than certain dividends or distributions of rights in connection with a shareholders' rights plan. Additionally, prior to December 12, 2011, even if we are current on the payment of dividends on the Preferred Stock, we may not do either of the following without the prior written consent of the UST: (a) pay cash dividends on our common stock to shareholders of more than \$0.01 per share per quarter, as adjusted for any stock split, stock dividend, reverse stock split, reclassification or similar transaction; or (b) repurchase any of our common stock or redeem any of our trust preferred securities, other than certain excepted redemptions of common stock in connection with the administration of employee benefit plans in the ordinary course of business and consistent with past practice. These restrictions described in the preceding sentence expire in the event we redeem all shares of Preferred Stock or in the event the UST transfers all of its shares of Preferred Stock to an unaffiliated transferee. Holders of shares of the Preferred Stock have no right to exchange or convert such shares into any other securities of Independent Bank Corporation.

The annual 5% dividend on the Preferred Stock together with the amortization of the discount will reduce net income (or increase the net loss) applicable to common stock by approximately \$4.3 million annually. In addition, the exercise price on the Warrant of \$3.12 per share is presently below our book and tangible book values per share. If our market value per share exceeds the Warrant price, our diluted earnings per share will be reduced. Further, the exercise of the Warrant would be dilutive to our book and tangible book values per share.

To supplement our balance sheet and capital management activities, we historically would repurchase our common stock. The level of share repurchases in a given time period generally reflected changes in our need for capital associated with our balance sheet growth and our level of earnings. The only share repurchases currently being executed are for our deferred compensation and stock purchase plan for non-employee directors. Such repurchases are funded by the director deferring a portion of his or her fees.

Shareholders' equity applicable to common stock declined to \$106.4 million at June 30, 2009 from \$126.4 million at December 31, 2008. Our tangible common equity (TCE) totaled \$78.5

Table of Contents

million and \$97.5 million, respectively, at those same dates. Our ratio of TCE to tangible assets was 2.66% at June 30, 2009 compared to 3.33% at December 31, 2008. Although we would like to have a higher ratio of TCE to tangible assets, we believe that in the current environment, it would be extremely difficult to raise additional common equity, at least at an acceptable price. However, despite these challenges, we are currently exploring various alternatives in order to increase our TCE. Our regulatory capital ratios remain at levels above well capitalized standards. Therefore, our capital strategy in the near term is focused on limiting growth in total assets, maintaining our quarterly common stock cash dividend at only a nominal level and returning to profitability as soon as possible in order to increase our ratio of TCE to tangible assets in the future. However, if we were to continue to incur losses at levels similar to the first half of 2009 in future periods, we may have to take additional and immediate actions to preserve our regulatory capital ratios, including, but not limited to:

- Eliminating our cash dividend on our common stock;
- Deferring the dividends on our Preferred Stock;
- Deferring the dividends on our trust preferred securities;
- Seeking to convert some or all of our Preferred Stock and/or trust preferred securities into common equity;
- Participating in government programs such as the Capital Assistance Program;
- Attempting to raise additional capital, including the possibility of a significant and large issuance of common stock, which could be highly dilutive to our existing shareholders; and
- Seeking a merger partner or selling off components of our business.

We reduced our quarterly common stock cash dividend to \$0.01 per share in the second quarter of 2008. This action was taken in order to preserve cash at our bank holding company as we do not expect our bank subsidiary to be able to pay any cash dividends in the near term. Although there are no specific regulations restricting dividend payments by bank holding companies (other than State corporate laws) the FRB (our primary federal regulator) has issued a policy statement on cash dividend payments. The FRB's view is that: an organization experiencing earnings weaknesses or other financial pressures should not maintain a level of cash dividends that exceeds its net income, that is inconsistent with the organization's capital position, or that can only be funded in ways that may weaken the organization's financial health. Although the FRB has not sought to restrict or limit the cash dividends that we have been paying, our Board of Directors believed that it was in the best long-term interests of our shareholders to reduce our quarterly common stock cash dividend to a nominal level (\$0.01 per share). Our bank holding company had cash on hand of approximately \$25.0 million at June 30, 2009. This level of cash provides approximately two years of coverage for expected dividends on trust preferred securities, the Preferred Stock and our common stock.

Table of Contents**Capitalization**

	June 30, 2009	December 31, 2008
	(in thousands)	
Subordinated debentures	\$ 92,888	\$ 92,888
Amount not qualifying as regulatory capital	(2,788)	(2,788)
Amount qualifying as regulatory capital	90,100	90,100
Shareholders' Equity		
Preferred stock, Series A, no par value	68,806	68,456
Common stock, par value \$1.00 per share	23,824	22,791
Capital surplus	201,192	200,687
Retained earnings (accumulated deficit)	(100,238)	(73,849)
Accumulated other comprehensive loss	(18,348)	(23,208)
Total shareholders' equity	175,236	194,877
Total capitalization	\$ 265,336	\$ 284,977

Total shareholders' equity at June 30, 2009 decreased \$19.6 million from December 31, 2008, due primarily to our first half 2009 net loss. Shareholders' equity totaled \$175.2 million, equal to 5.89% of total assets at June 30, 2009. At December 31, 2008, shareholders' equity was \$194.9 million, which was equal to 6.59% of total assets.

Our bank holding company and our bank subsidiary both remain well capitalized (as defined by banking regulations) at June 30, 2009.

Capital ratios

	June 30, 2009	December 31, 2008
Equity capital	5.89%	6.59%
Tier 1 capital to average assets	7.72	8.61
Tier 1 risk-based capital	9.64	11.04
Total risk-based capital	11.99	13.05

Asset/liability management Interest-rate risk is created by differences in the cash flow characteristics of our assets and liabilities. Options embedded in certain financial instruments, including caps on adjustable-rate loans as well as borrowers' rights to prepay fixed-rate loans also create interest-rate risk.

Our asset/liability management efforts identify and evaluate opportunities to structure the balance sheet in a manner that is consistent with our mission to maintain profitable financial leverage within established risk parameters. We evaluate various opportunities and alternate balance-sheet strategies carefully and consider the likely impact on our risk profile as well as the anticipated contribution to earnings. The marginal cost of funds is a principal consideration in the implementation of our balance-sheet management strategies, but such evaluations further consider interest-rate and liquidity risk as well as other pertinent factors. We have established parameters for interest-rate risk. We regularly monitor our interest-rate risk and report at least quarterly to our board of directors.

We employ simulation analyses to monitor our interest-rate risk profile and evaluate potential changes in our net interest income and market value of portfolio equity that result from changes in interest rates. The purpose of these simulations is to identify sources of interest-rate risk

Table of Contents

inherent in our balance sheet. The simulations do not anticipate any actions that we might initiate in response to changes in interest rates and, accordingly, the simulations do not provide a reliable forecast of anticipated results. The simulations are predicated on immediate, permanent and parallel shifts in interest rates and generally assume that current loan and deposit pricing relationships remain constant. The simulations further incorporate assumptions relating to changes in customer behavior, including changes in prepayment rates on certain assets and liabilities.

Change in Market Value of Portfolio Equity and Tax Equivalent Net Interest Income

Change in Interest Rates	Market Value Of Portfolio Equity(1)	Percent Change (Dollars in thousands)	Tax Equivalent Net Interest Income(2)	Percent Change
June 30, 2009				
200 basis point rise	189,700	6.45%	150,500	(0.33)%
100 basis point rise	186,900	4.88	150,000	(0.66)
Base-rate scenario	178,200		151,000	
100 basis point decline	170,200	(4.49)	149,500	(0.99)
200 basis point decline	166,200	(6.73)	147,600	(2.25)
December 31, 2008				
200 basis point rise	\$202,900	(2.50)%	\$129,700	(4.56)%
100 basis point rise	206,500	(0.77)	132,500	(2.50)
Base-rate scenario	208,100		135,900	
100 basis point decline	204,600	(1.68)	137,900	1.47
200 basis point decline	192,400	(7.54)	134,400	(1.10)

(1) Simulation analyses calculate the change in the net present value of our assets and liabilities, including debt and related financial derivative instruments, under parallel shifts in interest rates by discounting the estimated future cash flows using a market-based discount rate. Cash flow estimates

incorporate anticipated changes in prepayment speeds and other embedded options.

- (2) Simulation analyses calculate the change in net interest income under immediate parallel shifts in interest rates over the next twelve months, based upon a static balance sheet, which includes debt and related financial derivative instruments, and do not consider loan fees.

Critical Accounting Policies

Our accounting and reporting policies are in accordance with accounting principles generally accepted in the United States of America and conform to general practices within the banking industry. Accounting and reporting policies for other than temporary impairment of investment securities, the allowance for loan losses, originated mortgage loan servicing rights, derivative

Table of Contents

financial instruments, income taxes and goodwill are deemed critical since they involve the use of estimates and require significant management judgments. Application of assumptions different than those that we have used could result in material changes in our financial position or results of operations.

We are required to assess our investment securities for other than temporary impairment on a periodic basis. The determination of other than temporary impairment for an investment security requires judgment as to the cause of the impairment, the likelihood of recovery and the projected timing of the recovery. The topic of other than temporary impairment has been at the forefront of discussions within the accounting profession during 2008 and 2009 because of the dislocation of the credit markets that has occurred. On January 12, 2009 the Financial Accounting Standards Board (FASB) issued Staff Position No. EITF 99-20-1 Amendments to the Impairment Guidance of EITF Issue No. 99-20. This new FASB Staff Position (FSP) has been applicable to our financial statements since December 31, 2008. In particular, this FSP strikes the language that required the use of market participant assumptions about future cash flows from EITF 99-20. This change now permits the use of reasonable management judgment about whether it is probable that all previously projected cash flows will not be collected in determining other than temporary impairment. Our assessment process resulted in recording an other than temporary impairment charge of \$0.02 million in the first half of 2009 (we had no such charge in the first half of 2008). Further, we did elect (effective January 1, 2008) fair value accounting pursuant to SFAS #159 for certain of our preferred stock investments. We believe that our assumptions and judgments in assessing other than temporary impairment for our investment securities are reasonable and conform to general industry practices. At June 30, 2009 the cost basis of our investment securities classified as available for sale exceeded their estimated fair value at that same date by \$10.2 million. This amount is included in the accumulated other comprehensive loss section of shareholders' equity.

Our methodology for determining the allowance and related provision for loan losses is described above in Portfolio Loans and asset quality. In particular, this area of accounting requires a significant amount of judgment because a multitude of factors can influence the ultimate collection of a loan or other type of credit. It is extremely difficult to precisely measure the amount of losses that are probable in our loan portfolio. We use a rigorous process to attempt to accurately quantify the necessary allowance and related provision for loan losses, but there can be no assurance that our modeling process will successfully identify all of the losses that are probable in our loan portfolio. As a result, we could record future provisions for loan losses that may be significantly different than the levels that we recorded thus far in 2009.

At June 30, 2009 we had approximately \$14.5 million of mortgage loan servicing rights capitalized on our balance sheet. There are several critical assumptions involved in establishing the value of this asset including estimated future prepayment speeds on the underlying mortgage loans, the interest rate used to discount the net cash flows from the mortgage loan servicing, the estimated amount of ancillary income that will be received in the future (such as late fees) and the estimated cost to service the mortgage loans. We believe the assumptions that we utilize in our valuation are reasonable based upon accepted industry practices for valuing mortgage loan servicing rights and represent neither the most conservative or aggressive assumptions. We recorded a decrease in the valuation allowance on capitalized mortgage loan servicing rights of \$2.3 million in the first half of 2009 as mortgage loan interest rates increased at the end of the second quarter resulting in utilizing somewhat lower estimated future prepayment rates in our determination of the value of this asset at June 30, 2009 as compared to December 31, 2008.

Table of Contents

We use a variety of derivative instruments to manage our interest rate risk. These derivative instruments may include interest rate swaps, collars, floors and caps and mandatory forward commitments to sell mortgage loans. Under SFAS #133 the accounting for increases or decreases in the value of derivatives depends upon the use of the derivatives and whether the derivatives qualify for hedge accounting. At June 30, 2009 we had approximately \$228.0 million in notional amount of derivative financial instruments that qualified for hedge accounting under SFAS #133. As a result, generally, changes in the fair market value of those derivative financial instruments qualifying as cash flow hedges are recorded in other comprehensive income. The changes in the fair value of those derivative financial instruments qualifying as fair value hedges are recorded in earnings and, generally, are offset by the change in the fair value of the hedged item which is also recorded in earnings (we currently do not have any fair value hedges). The fair value of derivative financial instruments qualifying for hedge accounting was a negative \$4.6 million at June 30, 2009.

Our accounting for income taxes involves the valuation of deferred tax assets and liabilities primarily associated with differences in the timing of the recognition of revenues and expenses for financial reporting and tax purposes. At June 30, 2009 we had gross deferred tax assets of \$50.0 million, gross deferred tax liabilities of \$6.2 million and a valuation allowance of \$43.7 million (\$7.5 million of such valuation allowance was established in the first half of 2009 and the balance of which was established in 2008) resulting in a net deferred tax asset of \$0.1 million. This valuation allowance represents our entire net deferred tax asset except for certain deferred tax assets at Mepco that relate to state income taxes and that can be recovered based on Mepco's individual earnings. SFAS #109 requires that companies assess whether a valuation allowance should be established against their deferred tax assets based on the consideration of all available evidence using a more likely than not standard. In accordance with SFAS #109, we reviewed our deferred tax assets and determined that based upon a number of factors including our declining operating performance since 2005 and our net loss in 2008 and in the first quarter of 2009, overall negative trends in the bank industry and our expectation that our operating results will continue to be negatively affected by the overall economic environment, we should establish a valuation allowance for our deferred tax assets. In the last quarter of 2008, we recorded a \$36.2 million valuation allowance, which consisted of \$27.6 million recognized as income tax expense and \$8.6 million recognized through the accumulated other comprehensive loss component of shareholders' equity and in the first half of 2009 we recorded an additional \$7.5 million valuation allowance. We had recorded no valuation allowance on our net deferred tax asset in prior years because we believed that the tax benefits associated with this asset would more likely than not, be realized. Changes in tax laws, changes in tax rates and our future level of earnings can impact the ultimate realization of our net deferred tax asset as well as the valuation allowance that we have established.

At June 30, 2009 we had \$16.7 million of goodwill. Under SFAS #142, amortization of goodwill ceased, and instead this asset must be periodically tested for impairment. We test our goodwill for impairment utilizing the methodology and guidelines established in SFAS #142. This methodology involves assumptions regarding the valuation of the business segments that contain the acquired entities. We believe that the assumptions we utilize are reasonable. During 2008 we recorded a \$50.0 million goodwill impairment charge. In the fourth quarter of 2008 we updated our goodwill impairment testing (interim tests had also been performed in the second and third quarters of 2008). Our common stock price dropped even further in the fourth quarter resulting in a wider difference between our market capitalization and book value. The results of the year end goodwill impairment testing showed that the estimated fair value of our bank reporting unit was less than the carrying value of equity. Under SFAS #142 this necessitated a step 2 analysis and

Table of Contents

valuation. Based on the step 2 analysis (which involved determining the fair value of our bank's assets, liabilities and identifiable intangibles) we concluded that goodwill was now impaired, resulting in this \$50.0 million charge. The remaining goodwill of \$16.7 million is at our Mepco reporting unit and the testing performed indicated that this goodwill is not impaired. Mepco had net income from continuing operations of \$9.6 million in the first half of 2009 and \$10.7 million and \$5.1 million in 2008 and 2007, respectively. Based primarily on Mepco's estimated future earnings, the fair value of this reporting unit (utilizing a discounted cash flow method) has been determined to be in excess of its carrying value. We may incur additional impairment charges related to our remaining goodwill in the future due to changes in business prospects or other matters at Mepco that could affect our valuation assumptions.

Litigation Matters

We are involved in various litigation matters in the ordinary course of business and at the present time, we do not believe that any of these matters will have a significant impact on our financial condition or results of operations.

Table of Contents

Item 3.

Quantitative and Qualitative Disclosures about Market Risk

No material changes have occurred in the market risk faced by the Registrant since December 31, 2008.

Item 4.

Controls and Procedures

(a) Evaluation of Disclosure Controls and Procedures.

With the participation of management, our chief executive officer and chief financial officer, after evaluating the effectiveness of our disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) for the period ended June 30, 2009, have concluded that, as of such date, our disclosure controls and procedures were effective.

(b) Changes in Internal Controls.

During the quarter ended June 30, 2009, there were no changes in our internal control over financial reporting that materially affected, or are reasonably likely to materially affect, our internal control over financial reporting.

Part II

Item 1A. Risk factors

Over the last several months, there have been numerous media reports about bank failures. These reports have created concerns among certain of our customers, particularly those with deposit balances in excess of deposit insurance limits. We have proactively sought to provide appropriate information to our deposit customers about our organization in order to retain our business and deposit relationships. The outflow of significant amounts of deposits could have an adverse impact on our liquidity and results of operations.

Our subsidiary, Mepco Finance Corporation (Mepco), provides financing to administrators and sellers of after-market vehicle service contracts and similar products. Several marketers and sellers of these products, including companies to which Mepco has provided financing, have been sued or are under investigation for alleged violations of telemarketing laws and other consumer protection laws. The actions have been brought primarily by state attorneys general and the Federal Trade Commission (FTC) but there have also been class action and other private lawsuits filed. In some cases, the companies have been placed into receivership or have discontinued business. In addition, the allegations, particularly those relating to blatantly abusive telemarketing practices by a relatively small number of marketers, have resulted in a significant amount of negative publicity that has affected or may in the future affect sales throughout the industry. It is possible these events could also cause federal or state lawmakers to enact legislation to further regulate the industry. These events could have an adverse impact on Mepco in several ways. First, Mepco will face increased credit risk with respect to certain counterparties which could result in higher provisions for loan losses if these counterparties go out of business. In addition, if any federal or state investigation is expanded to include finance companies such as Mepco, Mepco will face additional legal and other expenses in connection with any such investigation. An increased level of private actions in which Mepco is named as a defendant will also cause Mepco to incur additional legal expenses as well as potential liability. Finally, Mepco has incurred and will likely continue to incur additional legal and other expenses in general in dealing with these industry problems.

Item 2. Changes in securities, use of proceeds and issuer purchases of equity securities

The following table shows certain information relating to purchases of common stock for the three-months ended June 30, 2009, pursuant to our share repurchase plan:

Period	Total Number of Shares Purchased ⁽¹⁾	Average Price Paid Per Share	Total Number of Shares Purchased as Part of a Publicly Announced Plan ⁽²⁾	Remaining Number of Shares Authorized for Purchase Under the Plan
April 2009	402	\$ 1.80		
May 2009				
June 2009				
Total	402	\$ 1.80	0	8,450

⁽¹⁾Shares purchased to fund our Deferred Compensation and Stock Purchase Plan for Non-employee

Directors.
(2)Our current
stock
repurchase plan
authorizes the
purchase up to
25,000 shares
of our common
stock. The
repurchase plan
expires on
December 31,
2009.

Table of Contents**Item 4. Submission of Matters to a Vote of Security-Holders**

Our Annual Meeting of Shareholders was held on April 28, 2009. As described in our proxy statement, dated March 24, 2009, the following matters were considered at that meeting:

(1) Election of directors:

Robert L. Hetzler, Michael M. Magee, Jr., and James E. McCarty were elected to serve three-year terms expiring in 2012. Votes for and votes withheld for each nominee were as follows:

	<u>Votes For</u>	<u>Votes Withheld</u>
Robert L. Hetzler	18,315,967	1,128,819
Michael M. Magee, Jr.	18,125,175	1,319,611
James E. McCarty	18,314,327	1,130,458

Directors whose term of office as a director continued after the meeting were Donna J. Banks, Jeffrey A. Bratsburg, Charles C. Van Loan, Stephen L. Gulis, Jr., Terry L. Haske, Clarke B. Maxson and Charles A. Palmer.

(2) Ratify the appointment of Crowe Horwath LLP as independent auditors for the fiscal year ending December 31, 2009. Votes for, votes against and abstentions were as follows:

Votes for:	18,777,608
Votes against:	319,309
Abstain:	347,867

(3) Consider and vote upon a proposal to amend our Amended and Restated Articles of Incorporation to increase the authorized shares of common stock from 40 million to 60 million shares:

Votes for:	16,181,423
Votes against:	2,990,608
Abstain:	272,740

(4) Participate in an advisory (non-binding) vote to approve the compensation of our executives, as disclosed in our proxy statement:

Votes for:	16,334,405
Votes against:	2,393,580
Abstain:	716,791

Item 6. Exhibits

(a) The following exhibits (listed by number corresponding to the Exhibit Table as Item 601 in Regulation S-K) are filed with this report:

11. Computation of Earnings Per Share.

31.1 Certificate of the Chief Executive Officer of Independent Bank Corporation pursuant to Section 302 of the Sarbanes-Oxley Act of 2002 (18 U.S.C. 1350).
