

SIMPSON MANUFACTURING CO INC /CA/
Form 10-K
February 29, 2008

UNITED STATES
SECURITIES AND EXCHANGE COMMISSION

Washington, D.C. 20549

FORM 10-K

(Mark One)

- Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act
of 1934**

for the fiscal year ended December 31, 2007

OR

- Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange
Act of 1934**

for the transition period from to .

Commission file number: 1-13429

Simpson Manufacturing Co., Inc.

(Exact name of registrant as specified in its charter)

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

Delaware
(State or other jurisdiction of
incorporation or organization)

94-3196943
(I.R.S. Employer
Identification No.)

5956 W. Las Positas Blvd., Pleasanton, CA 94588

(Address of principal executive offices)

Registrant's telephone number, including area code: **(925) 560-9000**

Securities registered pursuant to Section 12(b) of the Act:

Common Stock, par value \$0.01
(Title of each class)

New York Stock Exchange, Inc.
(Name of each exchange on which registered)

Securities registered pursuant to Section 12(g) of the Act:

None

(Title of class)

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Exchange Act.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of large accelerated filer, accelerated filer, and smaller reporting company in Rule 12b-2 of the Exchange Act.

Large accelerated filer Accelerated filer Non-accelerated filer Smaller Reporting Company .

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

As of June 30, 2007, there were outstanding 48,455,528 shares of the registrant's common stock, par value \$0.01, which is the only outstanding class of common or voting stock of the registrant. The aggregate market value of the shares of common stock held by nonaffiliates of the registrant (based on the closing price for the common stock on the New York Stock Exchange on June 29, 2007) was approximately \$1,256,625,347. As of February 25, 2008, 48,576,852 shares of the registrant's common stock were outstanding.

Documents Incorporated by Reference

The information called for by Part III is incorporated by reference to the definitive Proxy Statement for the Annual Meeting of Stockholders of the Company to be held April 23, 2008, which will be filed with the Securities and Exchange Commission not later than 120 days after December 31, 2007.

This document contains forward-looking statements, based on numerous assumptions and subject to risks and uncertainties. Although the Company believes that the forward-looking statements are reasonable, it does not and cannot give any assurance that its beliefs and expectations will prove to be correct. Many factors could significantly affect the Company's operations and cause the Company's actual results to be substantially different from the Company's expectations. Those factors include, but are not limited to: (i) general economic and construction business conditions; (ii) customer acceptance of the Company's products; (iii) relationships with key customers; (iv) materials and manufacturing costs; (v) the financial condition of customers, competitors and suppliers; (vi) technological developments; (vii) increased competition; (viii) changes in capital markets; (ix) governmental and business conditions in countries where the Company's products are manufactured and sold; (x) changes in trade regulations; (xi) the effect of acquisition activity; (xii) changes in the Company's plans, strategies, objectives, expectations or intentions; and (xiii) other risks and uncertainties indicated from time to time in the Company's filings with the Securities and Exchange Commission. Actual results might differ materially from results suggested by any forward-looking statements in this report. The Company does not have an obligation to publicly update any forward-looking statements, whether as a result of the receipt of new information, the occurrence of future events or otherwise. See Item 1A Risk Factors.

PART I

Item 1. Business.

Background

Simpson Manufacturing Co., Inc. (the Company), through its subsidiary, Simpson Strong-Tie Company Inc. (Simpson Strong-Tie or SST), designs, engineers and is a leading manufacturer of wood-to-wood, wood-to-concrete and wood-to-masonry connectors, SST Quik Drive screw fastening systems and collated screws, stainless steel fasteners, and pre-fabricated shearwalls. SST Anchor Systems also offers a full line of adhesives, mechanical anchors, carbide drill bits and powder actuated tools for concrete, masonry and steel. SST is the Company's connector products segment. The Company's subsidiary, Simpson Dura-Vent Company, Inc. (Simpson Dura-Vent or SDV), designs, engineers and manufactures venting systems for gas, wood, oil, pellet and other alternative fuel burning appliances. The Company markets its products to the residential construction, light industrial and commercial construction, remodeling and do-it-yourself (DIY) markets. SDV is the Company's venting products segment. The Company believes that SST benefits from strong brand name recognition among architects and engineers who frequently specify in building plans the use of SST products, and that SDV benefits from strong brand name recognition among contractors, dealers, distributors and SDV's relationships with original equipment manufacturers (OEMs) to which SDV markets its products. SST has continuously manufactured structural connectors since 1956. See Note 14 to the Company's Consolidated Financial Statements for information regarding the net sales, income from operations, depreciation and amortization, significant non-cash charges, income tax expense (benefit), capital expenditures and acquisitions and total assets for the Company's two operating segments. See Item 1A Risk Factors.

Connectors produced by Simpson Strong-Tie typically are steel devices that are used to strengthen, support and connect joints in residential and commercial construction and DIY projects. SST's Anchor Systems product line is included in the connector product segment. SST's connector products enhance the safety and durability of the structures in which they are installed and can save time and labor costs. SST's connector products contribute to structural integrity and resistance to seismic, wind and other forces. Applications range from commercial and residential building, to deck construction, to DIY projects. SST produces and markets over 8,500 standard and custom products.

Simpson Dura-Vent's venting systems are used to vent gas furnaces, water heaters, fireplaces and stoves, wood and oil burning appliances and wood pellet and corn stoves. SDV's metal vents, chimneys and chimney liner systems exhaust combustion products to the exterior of the building. SDV designs its products for ease of assembly and safe operation and to achieve a high level of performance. SDV produces and markets approximately 2,400 different venting products.

The Company emphasizes continuous new product development and often obtains patent protection for its new products. The Company's products are marketed in all 50 states of the United States and in Europe, Canada, Asia, Australia, New Zealand, Mexico and several countries in Central and South America. Both Simpson Strong-Tie and Simpson Dura-Vent products are distributed to home centers, through wholesale distributors and to contractors and dealers. Simpson Dura-Vent also sells to OEMs.

The Company has developed and uses automated manufacturing processes. Its innovative manufacturing systems and techniques have allowed it to control manufacturing costs, while developing both new products and products that meet customized requirements and specifications. The Company's development of specialized manufacturing processes has also permitted increased operating flexibility and enhanced product design innovation. The Company has 17 manufacturing locations in the United States, Canada, France, Denmark and England. SST intends to begin construction of a new manufacturing facility near Shanghai, China, in 2008, and is planning to move its production of mechanical anchors to the new Shanghai facility from its facility in Brampton, Ontario, in early 2009. SDV is planning to consolidate its production of venting products in Vacaville, California, and to close its Vicksburg, Mississippi, facility.

The Company is a Delaware corporation organized and merged with its predecessor company in 1999. The Company serves as a holding company for Simpson Strong-Tie and its subsidiaries and for Simpson Dura-Vent.

Industry and Market Trends

Based on trade periodicals, participation in trade and professional associations and communications with governmental and quasi-governmental organizations and with customers and suppliers, the Company believes that a variety of events and trends have resulted in significant developments in the markets that the Company serves. The Company's products are designed to respond to increasing demand resulting from these trends. Some of these events and trends are discussed below.

Natural disasters throughout the world have focused attention on safety concerns relating to the structural integrity of homes and other buildings. The 1995 earthquake in Kobe, Japan, the 1994 earthquake in Northridge, California, the 1989 Loma Prieta earthquake in Northern California, Hurricanes Hugo in 1989 and Andrew in 1992 and a series of hurricanes in 2004 and 2005, including Katrina, in the southeastern United States, and other less cataclysmic natural disasters, damaged and destroyed innumerable homes and other buildings, resulting in heightened consciousness of the fragility of some of those structures.

In recent years, architects, engineers, model code agencies, contractors, building inspectors and legislators have continued efforts to improve structural integrity and safety of homes and other buildings in the face of disasters of various types, including seismic events, storms and fires. Based on ongoing participation in trade and professional associations and communications with governmental and quasi-governmental regulatory agencies, the Company believes that building codes are being more uniformly applied around the country and their enforcement is becoming more rigorous.

Recently, there has been consolidation among several of the Company's customer groups. The industry has experienced increased complexity in home design, and builders are more aggressively trying to reduce their costs. The Company has responded to these trends by marketing its products as systems, in addition to individual parts. In some cases, the Company uses sophisticated design and specification software to facilitate systems marketing.

The requirements of the Endangered Species Act, the Federal Lands Policy Management Act and the National Forest Management Act have reduced the amount of timber available for harvest from public lands. Over the past several years, this and other factors have led to the increased use of engineered wood products. Engineered wood products, which substitute for strong, clear-grained lumber historically obtained from logging older, large-diameter trees, have been developed to conserve lumber. Engineered wood products frequently require specialized connectors and fasteners. Sales of Simpson Strong-Tie's engineered wood connector and fastener products have increased significantly over the past several years.

Concerns about energy conservation and air quality have led to increasing recognition of the advantages of natural gas as a heating fuel, including its clean burning characteristics. Use of natural gas for home heating has been increasing in the United States over a number of years, although recently higher costs for natural gas have led to increased use of alternative fuels. Simpson Dura-Vent markets a line of products designed to vent natural gas burning appliances.

The Company continues to develop its distribution through home centers throughout the United States. The Company's sales to home centers increased in 2005 and were flat in 2006 and 2007. See Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations.

The Company's principal markets are in the building construction industry. That industry is subject to significant volatility due to real estate market cycles, fluctuations in interest rates, the availability of credit to builders and developers, inflation rates, weather, and other factors and trends. Declines in residential construction in 2007 have reduced the demand for the Company's products. See Item 1A Risk Factors.

Business Strategy

The Company designs, manufactures and sells products that are of high quality and performance, easy to use and cost-effective for customers. The Company provides rapid delivery of its products and prompt engineering and sales support. Based on its communications with customers, engineers, architects, contractors and other industry participants, the Company believes that its products have strong brand-name recognition, and the Company seeks to continue to develop the value of its brand names through a variety of customer-driven strategies. Information provided by customers has led to the development of many of the Company's products, and the Company expects that customer needs will continue to shape the Company's product development, marketing and services.

Specification in architects' and engineers' plans and drawings influences which products will be used for particular purposes and therefore is key to the use of the Company's products in construction projects. The Company encourages architects and engineers to specify the installation of the Company's products in projects they design and supervise, and encourages construction contractors to accept the Company's products. The Company maintains frequent contacts with architects, engineers and contractors, as well as private organizations that provide information to building code officials, both to inform them regarding the quality, proper installation, capabilities and value of the Company's products and to update them about product modifications and new products that may be useful or necessary. The Company sponsors seminars to inform architects, engineers, contractors and building officials on appropriate use and proper installation of the Company's products. Additionally, the Company maintains relationships with home builders throughout the country to promote the use of its products.

The Company seeks to expand its product and distribution coverage through several channels:

Distributors. The Company regularly evaluates its distribution coverage and service levels provided by its distributors and from time to time modifies its distribution strategy and implements changes to address weaknesses and opportunities. The Company has various programs to evaluate distributor product mix and conducts promotions to encourage distributors to add Company products that complement the mix of product offerings in their markets.

Through its efforts to increase specifications by architects and engineers, and through increasing the number of products sold to particular contractors, the Company seeks to increase sales to channels that serve building contractors. The Company continuously seeks to expand the number of contractors served by each distributor through such sales efforts as demonstrations of product cost-effectiveness and information programs.

Home Centers. The Company intends to continue to increase penetration of the DIY markets by solicitation of home centers. The Company's sales force maintains on-going contact with home centers to work with them in a broad range of areas including inventory levels, retail display maintenance, and product knowledge training. To satisfy specialized requirements of the home center market, the Company has developed extensive bar coding and merchandising aids and has devoted a portion of its research efforts to the development of DIY products.

Dealers. In some markets, the Company sells its products directly to lumber dealers.

OEM Relationships. The Company works closely with manufacturers of engineered wood products and OEMs in developing and expanding the application and sales of Simpson Strong-Tie's engineered wood connector and fastener products and Simpson Dura-Vent's gas, wood and pellet stove venting products. SST has relationships with several of the largest manufacturers of engineered wood products, and SDV has OEM relationships with major fireplace and stove manufacturers.

While the Company is expanding its established facilities outside of California to increase its presence and sales in these markets, sales of some products may relate primarily to certain regions. For example, sales of SST's line of shearwalls, which the Company expanded with the introduction of a steel wall, are concentrated in the western region of the United States, because their use is primarily intended to resist the effects of seismic forces. Since 1993

- the Company has established operations in the United Kingdom,
- opened warehouse and distribution facilities in western Canada and the midwestern and northeastern United States,

- purchased anchor products manufacturers in Illinois and eastern Canada and connector product manufacturers in France, Denmark, Germany and Canada,
- acquired the assets of a leading manufacturer and distributor of screw fastening systems and collated screws with manufacturing and distribution operations in Tennessee and distribution in Canada, Europe, Australia and New Zealand, and
- acquired all of the stock of a manufacturer and distributor of stainless steel fasteners with manufacturing in Maryland and distribution in Maryland, Florida, Oregon and Massachusetts.

The Company intends its European investments to establish a presence in the European Community through companies with existing customer bases and through servicing United States-based customers operating there. The Company recently established sales offices in Hong Kong and Beijing and intends to commence construction of a manufacturing facility, primarily for Anchor Systems products, near Shanghai. The Company also distributes connector and epoxy products in Chile, Mexico, Japan, Australia and New Zealand. The Company intends to continue to pursue and expand operations both inside and outside of the United States (see Note 14 to the Company's Consolidated Financial Statements).

A Company goal is to manufacture and warehouse its products in geographic proximity to its markets to provide availability and rapid delivery of products to customers and prompt response to customer requests for specially designed products and services. With respect to the DIY and dealer markets, the Company's strategy is to keep the customer's retail stores continuously stocked with adequate supplies of the full line of the Company's products that those stores carry. The Company manages its inventory to help assure continuous product availability. Most customer orders are filled within a few days. High levels of manufacturing automation and flexibility allow the Company to maintain its quality standards while continuing to provide prompt delivery.

The Company's product research and development is based largely on needs that customers communicate to the Company. The Company typically has developed 10 to 20 new products annually (some of which may be produced in a range of sizes). The Company's strategy is to develop new products on a proprietary basis, to patent them when appropriate and to seek trade secret protection for others.

The Company's long-term strategy is to develop, acquire or invest in product lines or businesses that

- complement the Company's existing product lines,
- can be marketed through its existing distribution channels,
- might benefit from use of the Simpson Strong-Tie or Simpson Dura-Vent brand names and expertise,
- are responsive to needs of the Company's customers,
- expand its markets geographically and
- reduce its dependence on the United States residential construction market.

Simpson Strong-Tie

Overview

Connectors produced by Simpson Strong-Tie typically are steel devices that are used to strengthen, support and connect joints in residential and commercial construction and DIY projects. These products enhance the safety and durability of the structures in which they are installed and can save time and labor costs for the contractor. SST's connector products increase structural integrity and improve structural resistance to seismic, wind and other forces. Applications range from building framing to deck construction to DIY projects. SST produces and markets over 8,500 standard and custom products.

In the United States, connector usage developed faster in the West than elsewhere due to the low cost and abundance of timber and to local construction practices. Increasingly, the market has been influenced both by a growing awareness that the devastation caused by seismic, wind and other disasters can be reduced through improved building codes and construction practices and by environmental concerns that contribute to the increasing cost and reduced availability of wood. Most Simpson Strong-Tie products are listed by recognized building standards agencies as complying with model building codes and are specified by architects and engineers for use in projects they are designing or supervising. The engineered wood products industry continues to develop in response to concerns about the availability of wood, and the Company believes that SST is the leading supplier of connectors for use with engineered wood products.

Metal connectors, anchors and fasteners will corrode and lose load carrying capacity when installed in corrosive environments or exposed to corrosive materials. There are many environments and materials that may cause corrosion, including ocean salt air, fire retardants, preservative-treated wood, dissimilar metals, fumes and fertilizers. The variables present in a single building environment make it impossible to accurately predict if, or when, significant corrosion will begin or reach a critical level. This relative uncertainty makes it crucial that the specifier be knowledgeable of the potential risks and select a product coating or metal that is suitable for the intended use. Changes in the preservative-treated wood industry have created additional concerns. Effective December 31, 2003, the preservative-treated wood industry voluntarily transitioned from Chromated Copper Arsenate (CCA-C) used in residential applications to alternative treatments. Testing has shown that certain alternative replacement treatments are generally more corrosive than CCA-C. SST publishes technical bulletins on subjects such as this and others that affect the installation and use of its products and makes its technical bulletins available on its website at www.strongtie.com.

Products

Simpson Strong-Tie is a recognized brand name in the markets it serves. SST manufactures and markets products that strengthen the three types of connections typically found in residential and commercial construction: wood-to-wood, wood-to-concrete and wood-to-masonry. The Company's connector products, including its pre-fabricated shearwalls, are installed in a continuous load path from the foundation to the roof system. SST also markets specialty screws and nails for proper installation of certain of its connector products. These products have seismic, retrofit and remodeling applications for both new construction and DIY markets. Through its Anchor Systems product line, SST offers a full line of adhesives, mechanical anchors and powder-actuated tools for numerous anchoring applications in concrete, masonry and steel. SST also offers screw fastening systems and collated screws for various construction applications through the Quik Drive product line and a line of stainless steel fasteners through the Swan Secure product line.

Most of Simpson Strong-Tie's products are listed by recognized model building code agencies. To achieve such listings, SST conducts extensive product testing, which is witnessed and certified by independent testing engineers. The tests also provide the basis for publication of load ratings for SST structural connectors, and this information is used by architects, engineers, contractors and homeowners. The information is useful across the range of applications of SST's products, from the deck constructed by a homeowner to a multi-story structure designed by an architect or engineer in an earthquake zone.

Simpson Strong-Tie also manufactures connector products specifically designed for use with engineered wood products, such as wood I-joists. With increased timber costs and reduced availability of trees suitable for making traditional solid sawn lumber, construction with engineered wood products has increased substantially in the last several years. Over the same period, SST's sales of engineered wood connectors through dealer and contractor distributors and engineered wood product manufacturers have also increased.

New Product Development

Simpson Strong-Tie commits substantial resources to new product development. The majority of products have been developed through SST's internal research and development program. SST's research and development expense for the three years ended December 31, 2007, 2006 and 2005, was \$5,206,000, \$5,075,000 and \$4,302,000, respectively. SST is the only known United States manufacturer with the capability to test multi-story wall systems, thus enabling testing rather than calculations to prove system performance. SST engineering, sales, product management, and marketing teams work together with architects, engineers, building inspectors, code officials and customers in the new product development process.

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

SST typically develops 10 to 20 new products each year. This year, SST introduced significant enhancements to its pre-fabricated StrongWall shear wall product line and a new multi-story Anchor Tie-Down Systems (ATS) product line. Other new items include a line of composite deck screws, high capacity cast-in-place anchor bolts, a new high-capacity holdown, truss-to-wall ties, and a line of DIY fence repair products. SST also expanded its line of chemical and mechanical anchor products with new SET epoxy adhesive and new post-install anchors.

While continuing to service the new single-family residential housing market, SST has increased development efforts for products used in DIY, multi-family residential, and some light commercial and industrial markets. Distribution channels have been receptive to these new products.

Sales and Marketing

Simpson Strong-Tie's sales and marketing programs are implemented through SST's branch system. SST currently maintains branches in Northern and Southern California, Texas, Ohio, Maryland, Canada, England, France, Germany and Denmark. Each branch is served by its own sales force, as well as manufacturing, warehouse and office facilities. Each branch is responsible for a broad geographic area. Each is responsible for setting and executing sales and marketing strategies that are consistent with the markets that the branch serves and the goals of SST. The domestic branches closely integrate their manufacturing activities to enhance product availability. Branch sales forces in the United States are supported by marketing managers in the home office in Pleasanton, California. The home office also coordinates issues affecting customers that operate in multiple regions. The sales force maintains close working relationships with customers, develops new business, calls on architects, engineers and building officials and participates in a range of educational seminars.

Simpson Strong-Tie sells its products through an extensive distribution system comprising dealer distributors supplying thousands of retail locations nationwide, contractor distributors, home centers, lumber dealers, manufacturers of engineered wood products, and specialized contractors such as roof framers. In recent years, home centers have been one of the SST's fastest growing distribution channels. A large part of that growth was sales to The Home Depot, which exceeded 10% of the Company's consolidated net sales in each of the last three years (see Item 1A Risk Factors, Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations, and Note 14 to the Company's Consolidated Financial Statements). SST's DIY and dealer products are used to build projects such as decks, patio covers and garage organization systems.

Simpson Strong-Tie dedicates substantial resources to customer service. SST produces numerous publications and point-of-sale marketing aids to serve specifiers, distributors, retailers and users for the various markets that it serves. These publications include general catalogs, as well as various specific catalogs, such as those for its Anchor System products. The catalogs and publications describe the products and provide load and installation information. SST also maintains several linked websites centered on www.strongtie.com, which include catalogs, product and technical information, code reports and other general information related to SST's product lines and promotional programs.

Simpson Strong-Tie's engineers not only design and test products, but also provide engineering support for customers. This support might range from the discussion of a load value in a catalog to testing a unique application for an existing product. SST's sales force communicates with customers in each of its marketing channels, through its publications, seminars and frequent sales calls.

Based on its communications with customers, Simpson Strong-Tie believes that its products are important to its customers' businesses, and it is SST's policy to ship products within a few days of receiving the order, with many of the orders shipped the same day of receiving the order. Many of SST's customers serve contractors that require rapid delivery of needed products. Home centers and dealers also require superior service because of fluctuating demand and to serve the needs of a broad base of customers. To satisfy these requirements, SST maintains high inventory levels, has redundant manufacturing capability and some multiple dies to produce the same parts. SST also maintains information systems that provide sales and inventory control and forecasting capabilities throughout its network of factories and warehouses. SST also has special programs for contractors intended to ensure the prompt manufacture and delivery of custom products.

Simpson Strong-Tie believes that dealer and home center sales of SST products are significantly greater when the bins and racks at large dealer and home center locations are adequately stocked with appropriate products. Various retailers carry varying numbers of SST products. SST's sales force is engaged in ongoing efforts to inform retailers about SST's merchandising programs and the appeal of the SST brand.

Simpson Dura-Vent

Overview

Simpson Dura-Vent's venting systems are used to vent gas furnaces, water heaters, fireplaces and stoves, wood and oil burning appliances and wood pellet and corn stoves. SDV's metal vents, chimneys and chimney liner systems exhaust the products of combustion to the exterior of the building. SDV's products have been designed for ease of assembly and safe operation and to achieve a high level of performance. SDV produces and markets nearly 2,400 different venting products.

The clean burning characteristics of natural gas have gained public recognition, resulting in increased market share for natural gas appliances in the new construction and the appliance replacement markets. As a result, Simpson Dura-Vent has developed venting systems, such as Direct-Vent, to address changes in appliance technology. Fluctuations in natural gas prices, however, affect demand for gas appliances. Historically, during periods of high oil and natural gas prices and energy shortages, sales of wood and pellet burning stoves, considered alternative energy sources, have increased, while sales of gas burning appliances have tended to decline.

Simpson Dura-Vent's objective is to expand market share in all of its distribution channels, by entering expanding markets that address energy and environmental concerns. SDV's strategy is to capitalize on its strengths in new product development and its established distribution network and to continue its commitment to high quality and service. SDV operates manufacturing and warehouse facilities in California, Mississippi, Minnesota, and Ontario, Canada. In January 2008, SDV decided to close its Vicksburg, Mississippi, facility and consolidate its manufacturing operations in Vacaville, California.

Products

Simpson Dura-Vent is a leading supplier of double-wall Type B Gas Vent systems, used for venting gas furnaces, water heaters, boilers and decorative gas fireplaces. SDV's Type B Gas Vent product line features heavy-duty quality construction and a twist-lock design that provides for fast and easy job-site assembly compared to conventional snap-together designs. The twist-lock design has broader applications and has been incorporated into SDV's gas, pellet and Direct-Vent product lines. SDV also markets a patented flexible vent connector, Dura/Connect, for use between the gas appliance flue outlet and the connection to the Type B Gas Vent installed in the ceiling. Dura/Connect offers a simple twist, bend and connect installation for water heaters and gas furnaces.

Consumer concerns over the rising costs of natural gas and home heating oil in 2003 through the first half of 2006 increased demand for alternative fuel appliances. This resulted in increased demand for SDV's all-fuel chimney and pellet vent products, although demand for these and other SDV products declined along with the slowdown in home building activity in 2007. The gas fireplace market has evolved into two basic types of fireplace: top-vent fireplaces that are vented with the standard Type B Gas Vent and direct-vent fireplaces that use a special double-wall venting system. SDV's Direct-Vent system is designed not only to exhaust the flue products, but also to draw in outside air for combustion, an important feature in modern energy-efficient home construction. The Direct-Vent gas fireplace systems provide ease of installation, permitting horizontal through-the-wall venting or standard vertical through-the-roof venting. SDV has established relationships with several large manufacturers of gas stoves and gas fireplaces to supply Direct-Vent venting products. In 1996, SDV expanded its Direct-Vent product line to include both co-axial and co-linear Direct-Vent systems for venting gas stoves and gas inserts into existing masonry chimneys or existing factory-built metal chimneys.

New Product Development

Simpson Dura-Vent has gained industry recognition by offering innovative new products that meet changing needs of customers. SDV representatives serve on industry committees concerned with issues such as new appliance standards and government regulations. SDV's research and development expense for the three years ended December 31, 2007, 2006 and 2005, was \$816,000, \$601,000 and \$598,000, respectively. SDV also maintains working relationships with research and development departments of major appliance manufacturers, providing prototypes for field testing and conducting tests in SDV's testing laboratory. SDV believes that such relationships provide competitive advantages. For example, SDV introduced the first venting system for Direct-Vent gas appliances. In 2004, SDV completed testing for a new chimney product line, Dura-Plus HTC, which is designed to meet Canadian standards for chimney systems, and began marketing in Canada in 2005. In 2006, SDV launched a new, improved PelletVent for venting pellet burning stoves. SDV manufactures the new PelletVent product line using its new laser weld equipment. SDV has filed a patent application for the new PelletVent product line. In 2007, SDV determined that the exhaust gases that result from burning corn pellets and other bio fuels can be corrosive and has begun using material that is more suited to this application.

Also in 2007, SDV launched improvements in its Direct-Vent categories, applying laser weld techniques, and launched a new air-cooled large diameter (10 through 16) chimney product line, Dura-Chimney 2, for venting very large wood burning fireplaces.

Sales and Marketing

Simpson Dura-Vent's sales and marketing programs are implemented through SDV's sales and marketing staff and a network of independent manufacturer's agents. SDV markets venting systems for both gas and wood burning

appliances through wholesale distributors in the United States, Canada and Australia to the HVAC (heating, ventilating and air conditioning) and PHC (plumbing, heating and cooling) contractor markets, and to fireplace specialty shop distributors. These customers sell to contractor and DIY markets. SDV also markets venting products to home center and hardware store chains. SDV has established OEM relationships with several major gas fireplace and gas stove manufacturers, which SDV believes are leaders in the direct-vent gas appliance market.

Simpson Dura-Vent responds to technological changes occurring in the industry through new product development and has developed a reputation for quality and service to its customers. To reinforce its reputation for quality, SDV produces extensive sales support literature and advertising materials. Recognizing the difficulty that customers and users may have in understanding correct sizing for venting, SDV publishes a sizing handbook to assist contractors, building officials and retail outlets. Advertising and promotional materials have been designed to be used by distributors and their customers, as well as home centers and hardware chains.

To enhance its marketing effort, SDV has developed a website, www.duravent.com, that includes product descriptions, catalogs and installation instructions, as well as a direct link to SDV's customer service and engineering departments. SDV also regularly publishes and sends e-mail newsletters to its distributors and authorized Dura-Pro dealers.

Manufacturing Process

The Company designs and manufactures most of its standard products. The Company has concentrated on making its manufacturing processes as efficient as possible without compromising the quality or flexibility necessary to serve the needs of its customers. The Company has developed and uses automated manufacturing processes. The Company's innovative manufacturing systems and techniques have allowed it to control manufacturing costs, even while developing both new products and products that meet customized requirements and specifications. The Company's development of specialized manufacturing processes also has permitted increased operating flexibility and enhanced product design innovation. The Company sources some products from third party vendors, both domestically and internationally.

The Company is committed to helping people build safer structures economically through the design, engineering and manufacturing of structural connectors, pre-fabricated shearwalls, anchors and related products. To this end, the Company has developed a quality management system that employs numerous quality-control procedures, such as computer-generated work orders, constant review of parts as they are produced and frequent quality testing (see Item 1A Risk Factors). Since 1996, Simpson Strong-Tie's quality management system has been registered under ISO 9001, an internationally recognized set of quality-assurance standards. The Company believes that ISO registration is a valuable tool for maintaining its high quality standards, and that is increasingly important to United States companies. As SST establishes new business locations through expansion or acquisitions, projects are established to integrate SST's quality systems and achieve ISO 9001 registration. In addition, SST has five testing laboratories accredited to ISO standard 17025, an internationally accepted standard that provides requirements for the competence of testing and calibration laboratories.

Simpson Strong-Tie operates manufacturing or warehouse facilities in California, Texas, Ohio, Florida, Connecticut, Illinois, Washington, Tennessee, Minnesota, North Carolina, Maryland, Oregon, Massachusetts, British Columbia, Ontario, England, France, Denmark, Germany, Australia, Scotland, Austria and Poland. Most of SST's products are produced with a high level of automation, using progressive dies run in automatic presses making parts from coiled sheet steel at rates that often exceed 100 strokes per minute. SST estimates that it produces over 1.5 billion product pieces per year. Most of SST's products (SKUs) are bar coded with UPC numbers for easy identification, and nearly all of the products sold to home centers are labeled with bar codes. SST has significant press capacity and has multiple dies for some of its high volume products because of the need to produce these products close to the customer and to provide backup capacity. The balance of production is accomplished through a combination of manual, blanking and numerically controlled (NC) processes that include robotic welders, lasers and turret punches. This capability allows SST to produce products with little redesign or set-up time, facilitating rapid turnaround for customers. New tooling is also highly automated. Dies are designed and produced using computer aided design (CAD) and computer aided machining

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

(CAM) systems. CAD/CAM capability enables SST to create multiple dies quickly and design them to high standards. The Company is constantly reviewing its product line to reduce manufacturing costs, increase automation, and take advantage of new types of materials.

Simpson Strong-Tie also manufactures chemical anchoring products at its facility in Addison, Illinois. The chemicals are mixed in batches and are then loaded in two-part dispensers. These dispensers mix the product on the job site

since set up times are usually very short. In addition, SST purchases a number of products, primarily fasteners, powder actuated tools and accessories and certain of its mechanical anchoring products, from various sources around the world. These purchased products undergo inspections on a sample basis for conformance with ordered specifications and tolerances before being distributed.

Simpson Dura-Vent operates manufacturing or warehouse facilities in California, Mississippi, Minnesota, and Ontario, Canada, although it plans to close its Mississippi facility in 2009. SDV produces component parts for venting systems using NC-controlled punch presses equipped with high-speed progressive and compound tooling. SDV's vent pipe and elbow assembly lines are automated, to produce finished products efficiently from large coils of steel and aluminum. UPC bar coding and computer tracking systems provide SDV's industrial engineers and production supervisors with real-time productivity tools to measure and evaluate current production rates, methods and equipment.

Regulation

Simpson Strong-Tie's product lines are subject to federal, state, county, municipal and other governmental and quasi-governmental regulations that affect product design, development, testing, applications, marketing, sales, installation and use. Most SST products are recognized by building code and standards agencies. Agencies that recognize Company products include the International Code Council Evaluation Service (ICC-ES), the City of Los Angeles, the State of Florida, the State of Wisconsin, and the California Division of the State Architect. These and other agencies adopt various testing and design standards and incorporate them into their related building codes. With the adoption of the International Residential Code and the International Building Code, these standards are being applied more uniformly, and these Codes are recognized throughout most of the United States. SST considers code recognition to be a significant marketing tool and devotes considerable effort to obtaining and maintaining appropriate approvals for its products. SST believes that architects, engineers, contractors and other customers are more likely to purchase structural products that have the appropriate code acceptance than competitive products that lack code acceptance. SST actively participates in industry related professional associations to keep abreast of regulatory changes and to provide information to regulatory agencies.

Simpson Dura-Vent operates under a regulatory environment that includes appliance and venting performance standards related to safety, energy efficiency and air quality. Gas venting regulations are contained in the National Fuel Gas Code (NFGC), while safety and performance regulations for wood burning appliances and chimney systems are contained in a National Fire Protection Association standard (NFPA 211). Standards for testing gas vents and chimneys are developed by testing laboratories such as Underwriter's Laboratories (UL) in compliance with the American National Standards Institute. The Environmental Protection Agency (EPA) regulates clean air standards for both gas and wood burning appliances. The Department of Energy (DOE) regulates energy efficiency standards under the authority of the National Appliance Energy Conservation Act. Under this Act, the DOE periodically reviews the necessity for increased efficiency standards with respect to gas furnaces and gas water heaters. A substantial percentage of SDV's Type B Gas Vent sales are for gas furnaces and gas water heaters. Minimum appliance efficiency standards have been enacted that could negatively affect sales of Type B Gas Vents, which could adversely affect the Company's operating results. In turn, the various building codes could be adopted by local municipalities, resulting in enforcement through the building permit process. Safety, air quality and energy efficiency requirements are enforced by local air quality districts and municipalities by requiring proper UL, EPA and DOE labels on appliances and venting systems.

Competition

The Company faces a variety of competition in all of the markets in which it participates. This competition ranges from subsidiaries of large national or international corporations to small regional manufacturers. While price is an important factor, the Company competes on the basis of quality, breadth of product line, technical support, availability of inventory, service (including custom design and manufacturing), field support and product innovation. As a result of differences in structural design and building practices and codes, Simpson Strong-Tie's markets tend to differ by region. Within these regions, SST competes with companies of varying size, several of which also distribute their products nationally.

The venting industry is highly competitive. SDV's competitors include a variety of manufacturers that have operations in the United States, Canada, China and Mexico. Most of its competitors do not compete in all of SDV's product lines, and some have additional product lines that SDV does not offer. SDV competes on the basis of quality, service, breadth of product line, availability of inventory, technical support, and product innovation.

Raw Materials

The principal raw material used by both Simpson Strong-Tie and Simpson Dura-Vent is steel, including stainless steel. The Company generally orders steel to specific American Society of Testing and Materials (ASTM) standards. SST also uses materials such as epoxies and acrylics in the manufacture of its chemical anchoring products. SDV also uses raw materials such as aluminum, aluminum alloys and ceramic and other insulation materials, and both SST and SDV use cartons. The Company purchases raw materials from a variety of commercial sources. The Company's practice is to seek cost savings and enhanced quality by purchasing from a limited number of suppliers.

The steel industry is highly cyclical and prices for the Company's raw materials are influenced by numerous factors beyond the Company's control, including general economic conditions, competition, labor costs, foreign exchange rates, import duties, raw material shortages and other trade restrictions. Steel prices declined during the first half of 2005, and quickly increased in the fourth quarter of 2005, in response to raw material shortages and increased demand from Hurricane Katrina. Steel prices continued to increase into 2006 and, after easing in the early part of 2007, rose again mid-year 2007. Numerous factors may cause steel prices to increase in the future. In addition to increases in steel prices, mills added surcharges for zinc, energy and freight in response to increases in their costs. These and other factors could adversely affect the Company's cost and access to steel in 2008. The Company might not be able to increase its product prices to correspond to increases in raw material prices without materially and adversely affecting its sales and profits. See Item 1A Risk Factors and Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations. The Company historically has not attempted to hedge against changes in prices of steel or other raw materials.

Patents and Proprietary Rights

The Company's subsidiaries have United States and foreign patents, the majority of which cover products that they currently manufacture and market. These patents, and applications for new patents, cover various design aspects of the subsidiaries' products, as well as processes used in their manufacture. The Company's subsidiaries are continuing to develop new potentially patentable products, product enhancements and product designs. Although the Company's subsidiaries do not intend to apply for additional foreign patents covering existing products, the Company has developed an international patent program to protect new products that its subsidiaries may develop. In addition to seeking patent protection, the Company relies on unpatented proprietary technology to maintain its competitive position. See Item 1A Risk Factors.

Acquisitions and Expansion into New Markets

The Company's future growth, if any, may depend to some extent on its ability to penetrate new markets, both domestically and internationally. See Industry and Market Trends and Business Strategy. Therefore, the Company may in the future pursue acquisitions of product lines or businesses. See Item 1A Risk Factors and Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations.

In July 2007, the Company purchased all of the stock of Swan Secure Products, Inc. (Swan Secure) for \$42.1 million in cash, net of cash received. Swan Secure is a manufacturer and distributor of fasteners, largely stainless steel, and its products are marketed throughout the United States. In October 2004, the Company acquired the assets of Quik Drive, U.S.A., Inc. and Quik Drive Canada, Inc. and 100% of the equity of Quik Drive Australia Pty. Limited (collectively Quik Drive). Quik Drive manufactures collated fasteners and fastener delivery systems which are marketed in the United States, Canada, Europe, Australia and New Zealand. The purchase price was \$32.0 million in cash and \$5.0 million in stock.

Seasonality and Cyclicity

The Company's sales are seasonal, and operating results vary from quarter to quarter. The Company's sales are also dependent, to a large degree, on the North American residential home construction industry and operating results vary with economic cycles. See Item 1A Risk Factors and Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations.

Environmental, Health and Safety Matters

The Company is subject to environmental laws and regulations governing emissions into the air, discharges into water, and generation, handling, storage, transportation, treatment and disposal of waste materials. The Company is also subject to other federal and state laws and regulations regarding health and safety matters. The Company believes that it has obtained all material licenses and permits required by environmental, health and safety laws and regulations in connection with the Company's operations and that its policies and procedures comply in all material respects with existing environmental, health and safety laws and regulations. See Item 1A Risk Factors.

Employees and Labor Relations

As of January 1, 2008, the Company had 2,742 full-time employees, of whom 1,737 were hourly employees and 1,005 were salaried employees. The Company believes that its overall compensation and benefits for the most part meet or exceed industry averages and that its relations with its employees are good.

A significant number of the employees at three of the Company's facilities are represented by labor unions and are covered by collective bargaining agreements. Two of the Company's collective bargaining agreements cover the Company's tool and die craftsmen and maintenance workers in Brea, California, and its sheetmetal workers in Brea and Ontario, California. These two contracts expire in June 2008 and March 2008, respectively. Simpson Strong-Tie's facility in Stockton, California, is also a union facility with two collective bargaining agreements that will expire September 2011. The company had a brief work stoppage in 2007 at its Stockton facility. See Item 1A Risk Factors.

Available Information

The SEC maintains an internet site (<http://www.sec.gov>) that contains reports, proxy and information statements, and other information regarding issuers that file electronically with the SEC. The Company makes available, free of charge, copies of its recent annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K, corporate governance guidelines and code of ethics and the charters of the Audit, Compensation, and Governance and Nominating Committees of its Board of Directors on its website at www.simpsonmfg.com. Printed copies of any of these materials will be provided on request.

Item 1A. Risk Factors.

You should carefully consider the following risks before you decide to buy or hold shares of our common stock. If any of the following risks actually occurs, our business, results of operations or financial condition would likely suffer. In such case, the trading price of our common stock could decline, and you may lose all or part of the money you paid to buy our stock.

This and other public reports may contain forward-looking statements based on current expectations, assumptions, estimates and projections about us and our industry. Those forward-looking statements involve risks and uncertainties. Our actual results could differ materially from

those forward-looking statements as a result of many factors, as more fully described below and elsewhere in our public reports. We do not undertake to update publicly any forward-looking statements for any reason, even if new information becomes available or other events occur in the future.

Failure to comply with industry regulations could result in reduced sales and increased costs.

The design, capacity and quality of most of our products and manufacturing processes are subject to numerous and extensive regulations and standards promulgated by governmental, quasi-governmental and industry organizations. These regulations and standards are highly technical, complex and subject to frequent revision. If our products or manufacturing processes fail to comply with any regulations or standards, we may not be able to manufacture and market our products profitably. Failure to comply with regulations and standards could therefore materially reduce our sales and increase our costs.

If we fail to compete effectively, our revenue and profit margins could decline.

We face a variety of competition in all of the markets in which we participate. Many of our competitors have greater financial and other resources than we do. In addition, other technologies may be the bases for competitive products

that could render our products obsolete or noncompetitive. Other companies may find our markets attractive and enter those markets. Competitive pricing, including price competition or the introduction of new products, could have material adverse effects on our revenues and profit margins.

Our ability to compete effectively depends to a significant extent on the specification or approval of our products by architects, engineers, building inspectors, building code officials and customers. If a significant segment of those communities were to decide that the design, materials, manufacturing, testing or quality control of our products is inferior to that of any of our competitors, our sales and profits would be materially reduced.

If we lose all or part of a large customer, our sales and profits would decline.

We have substantial sales to a few large customers. Loss of all or part of our sales to a large customer would have a material adverse effect on our revenues and profits. Our largest customer accounted for 15% and 17% of net sales for the years ended December 31, 2007 and 2006, respectively. See Note 14 to the Company's Consolidated Financial Statements. This customer may endeavor to replace, in some or all markets, our products with lower-priced products supplied by others or may otherwise reduce its purchases of our products. We also might reduce our dependence on our largest customer by reducing or terminating sales to one or more of the customer's subsidiaries. Any reduction in, or termination of, our sales to this customer would at least temporarily, and possibly longer, cause a material reduction in our net sales, income from operations and net income. A reduction in or elimination of our sales to our largest customer, or another of our larger customers, would increase our relative dependence on our remaining large customers.

In addition, our customers include retailers and distributors. Retail and distribution businesses have consolidated over time, which could increase the material adverse effect of losing any of them.

Increases in prices of raw materials could negatively affect our sales and profits.

Our principal raw material is steel, including stainless steel. The steel industry is highly cyclical. Numerous factors beyond our control, such as general economic conditions, competition, worldwide demand, labor costs, energy costs, foreign exchange rates, import duties and other trade restrictions, influence prices for our raw materials. In March 2002, for example, the United States imposed tariffs on several types of imported steel, which increased our cost of steel. In addition, consolidation among domestic integrated steel producers, changes in supply and demand in steel markets, the weakening United States dollar and other events have led to increased steel costs. The domestic steel market is heavily influenced by three major United States manufacturers. Worldwide demand for steel is strong. We have not always been able, and in the future we might not be able, to increase our product prices in amounts that correspond to increases in costs of raw materials, without materially and adversely affecting our sales and profits. We have not attempted to hedge against changes in prices of steel or other raw materials.

If we cannot protect our technology, we will not be able to compete effectively.

Our ability to compete effectively with other companies depends in part on our ability to maintain the proprietary nature of our technology, in part through patents. We might not be able to protect or rely on our patents. Patents might not issue pursuant to pending patent applications. Others might independently develop the same or similar technology, develop around the patented aspects of any of our products or proposed

products, or otherwise obtain access to or circumvent our proprietary technology. We also rely on unpatented proprietary technology to maintain our competitive position. We might not be able to protect our know-how or other proprietary information. If we are unable to maintain the proprietary nature of our significant products, our sales and profits could be materially reduced.

In attempting to protect our proprietary information, we sometimes initiate lawsuits against competitors and others that we believe have infringed or are infringing our rights. In such an event, the defendant may assert counterclaims to complicate or delay the litigation, or for other reasons. Litigation may be very costly and may result in adverse judgments that affect our sales and profits materially and adversely.

Integrating acquired businesses may divert management's attention away from our day-to-day operations.

In the future, we may pursue acquisitions of product lines or businesses. Acquisitions involve numerous risks, including, for example:

- difficulties assimilating the operations and products of acquired businesses;
- diversion of management's attention from other business concerns;
- overvaluation of acquired businesses;
- undisclosed existing or potential liabilities of acquired businesses;
- acceptance of acquired businesses' products by our customers;
- risks of entering markets in which we have little or no prior experience;
- litigation involving activities, properties or products of acquired businesses;
- consumer and other claims related to products of acquired businesses; and
- the potential loss of key employees of acquired businesses.

The integration of our acquired operations, products and personnel may place a significant burden on management and our internal resources. The diversion of management attention and any difficulties encountered in the transition and integration process could harm our business.

In addition, future acquisitions may cause us to issue additional equity securities that dilute the value of our existing equity securities, increase our debt, and cause impairment and amortization expenses related to goodwill and other intangible assets which could materially and adversely

affect our profitability. Any acquisition could materially and adversely affect our business and operating results.

Significant costs to integrate our acquired operations may negatively affect our financial condition and the market price of our stock.

We will incur costs from integrating acquired business operations, products and personnel. These costs may be significant and may include expenses and other liabilities for employee redeployment, relocation or severance, combining teams and processes in various functional areas, reorganization or closures of facilities, and relocation or disposition of excess equipment. The integration costs that we incur may negatively affect our profitability and the market price of our stock.

Our future growth may depend on our ability to penetrate new domestic and international markets, which could reduce our profitability.

International construction customs, standards, techniques and methods differ from those in the United States. Laws and regulations applicable in new markets may be unfamiliar to us. Compliance may be substantially more costly than we anticipate. As a result, we may need to redesign products, or invent or design new products, to compete effectively and profitably in new markets. We expect that we will need significant time, which may be years, to generate substantial sales or profits in new markets.

Other significant challenges to conducting business in foreign countries include, among other factors, local acceptance of our products, political instability, currency controls, changes in import and export regulations, changes in tariff and freight rates, and fluctuations in foreign exchange rates. We might not be able to penetrate these markets and any market penetration that occurs might not be timely or profitable. If we do not penetrate these markets within a reasonable time, we will be unable to recoup part or all of the significant investments we will have made in attempting to do so.

Seasons and business cycles affect our operating results.

Our sales are seasonal, with operating results varying from quarter to quarter. With some exceptions, our sales and income have historically been lower in the first and fourth quarters than in the second and third quarters of the year, as customers purchase construction materials in the late spring and summer months for the construction season. In addition, weather conditions, such as unseasonably warm, cold or wet weather, which affect, and sometimes delay or accelerate, installation of some of our products, significantly affect our results of operations. Political and economic events can also affect our revenues.

We have little control over the timing of customer purchases. Sales that we anticipate in one quarter may occur in another quarter, affecting both quarters' results. In addition, we incur significant expenses as we develop, produce and market our products in anticipation of future orders. We maintain high inventory levels and typically ship orders as we receive them, so we operate with little backlog. As a result, net sales in any quarter generally depend on orders booked and shipped in that quarter. A significant portion of our operating expenses is fixed. Planned expenditures are based primarily on sales forecasts. When sales do not meet our expectations, our operating results will be reduced for the relevant quarters, as we will have already incurred expenses based on those expectations.

Our principal markets are in the building construction industry. That industry is subject to significant volatility due to real estate market cycles, fluctuations in interest rates, the availability of credit to builders and developers, inflation rates, weather, and other factors and trends. None of these factors or trends is within our control. Declines in commercial and residential construction, such as housing starts, can be expected to reduce the demand for our products. Future negative economic or construction industry performance could adversely affect our business. Declines in construction activity or demand for our products could materially and adversely affect our sales and profitability.

Product liability claims and product recalls could harm our reputation, sales and financial condition.

We design and manufacture most of our standard products and expect to continue to do so, although we buy raw materials and some manufactured products from others. We have on occasion found flaws and deficiencies in the manufacturing, design or testing of our products. We also have on occasion found flaws and deficiencies in raw materials and finished goods produced by others. Some flaws and deficiencies have not been apparent until after the products were installed by customers.

Many of our products are integral to the structural soundness or safety of the structures in which they are used. If any flaws or deficiencies exist in our products and if such flaws or deficiencies are not discovered and corrected before our products are incorporated into structures, the structures could be unsafe or could suffer severe damage, such as collapse or fire, and personal injury could result. Errors in the installation of our products, even if the products are free of flaws and deficiencies, could also cause personal injury and unsafe structural conditions. To the extent that such damage or injury is not covered by our product liability insurance and we are held to be liable, we could be required to correct such damage and to compensate persons who might have suffered injury, and our reputation, business and financial condition could be materially and adversely affected.

Even if a flaw or deficiency is discovered before any damage or injury occurs, we may need to recall products, and we may be liable for any costs necessary to replace recalled products or retrofit the affected structures. Any such recall or retrofit could entail substantial costs and adversely affect our reputation, sales and financial condition. We do not carry insurance against recall costs or the adverse business effect of a recall, and our product liability insurance may not cover retrofit costs.

Claims resulting from a natural disaster might be made against us with regard to damage or destruction of structures incorporating our products. Any such claims, if asserted, could materially and adversely affect our business and financial condition.

Complying or failing to comply with environmental, health and safety laws and regulations could affect us materially and adversely.

We are subject to environmental laws and regulations governing emissions into the air, discharges into water, and generation, handling, storage, transportation, treatment and disposal of waste materials. We are also subject to other federal and state laws and regulations regarding health and safety matters.

Our manufacturing operations involve the use of solvents, chemicals, oils and other materials that are regarded as hazardous or toxic. We also use complex and heavy machinery and equipment that can pose severe safety hazards, especially if not properly and carefully used. Some of our products also incorporate materials that are hazardous or toxic in some forms, such as zinc and lead used in some steel galvanizing processes and chemicals used in our acrylic and epoxy anchoring products. The gun powder used in our powder-actuated tools is explosive. Misuse of other materials in some of our products could also cause injury or sickness.

If we do not obtain all material licenses and permits required by environmental, health and safety laws and regulations, we may be subject to regulatory action by governmental authorities. If our policies and procedures do not comply in all respects with existing environmental, health and safety laws and regulations, our activities might violate such laws and regulations. Even if our policies and procedures do comply, but our employees fail or neglect to follow them in all respects, we might incur similar liability. Relevant laws and regulations could change or new ones could be adopted that require us to obtain additional licenses and permits and cause us to incur substantial expense.

Our generation, handling, use, storage, transportation, treatment or disposal of hazardous or toxic materials, machinery and equipment might cause injury to persons or to the environment. We may need to take remedial action if properties that we occupy are contaminated by hazardous or toxic substances.

Any change in laws or regulations, any legal or regulatory violations, or any contamination, could materially and adversely affect our business and financial condition.

New appliance efficiency standards could materially and adversely affect our operating results and financial condition.

The Department of Energy regulates energy efficiency under the authority of the National Appliance Energy Conservation Act. Under this Act, the Department of Energy periodically reviews the need for increased efficiency standards with respect to gas furnaces and gas water heaters. A substantial percentage of our Type B Gas Vent sales are for gas furnaces and gas water heaters. The Department of Energy might adopt minimum appliance efficiency standards that negatively affect sales of Type B Gas Vents, which could materially and adversely affect our operating results.

We depend on key management and technical personnel, the loss of whom could harm our business.

We depend on certain key management and technical personnel, including, among others, Thomas J Fitzmyers, Michael J. Herbert, Phillip Terry Kingsfather, Barclay Simpson and Stephen P. Eberhard. The loss of one or more key employees could materially and adversely affect us.

Our success also depends on our ability to attract and retain additional highly qualified technical, marketing and management personnel necessary for the maintenance and expansion of our activities. We face strong competition for such personnel. We might not be able to attract or retain such personnel. In addition, when we experience periods with little or no profits, a decrease in compensation based on our profits may make it difficult to attract and retain highly qualified personnel.

Any work stoppage or interruption by employees could materially and adversely affect our business and financial condition.

A significant number of our employees are represented by labor unions and are covered by collective bargaining agreements that will expire in 2008 and 2011. A work stoppage or interruption by a significant number of our employees could have a material and adverse effect on our sales and profitability.

International operations expose us to foreign exchange rate risk.

We have foreign exchange rate risk in our international operations and through purchases from foreign vendors. We do not currently hedge this risk. Changes in currency exchange rates could materially and adversely affect our sales and profitability.

Natural disasters could decrease our manufacturing capacity.

Most of our current and planned manufacturing facilities are located in geographic regions that have experienced major natural disasters, such as earthquakes, floods and hurricanes. For example, the earthquakes in Northridge, California, in January 1994, destroyed several freeways and numerous buildings in the region in which our facilities in Brea are located. Our disaster recovery plan may not be adequate or effective. We do not carry earthquake insurance. Other insurance that we carry is limited in the risks covered and the amount of coverage. Our insurance would not be adequate to cover all of our resulting costs, business interruption and lost profits when a major natural disaster occurs. A natural disaster rendering one or more of our manufacturing facilities totally or partially unusable, whether or not covered by insurance, would materially and adversely affect our business and financial condition.

Control by our principal stockholders will prevent other stockholders from influencing management.

Barclay Simpson, the Chairman of our Board of Directors, controls approximately 22% of the outstanding shares of our common stock. Thomas J Fitzmyers, our President and Chief Executive Officer, owns less than 1% of the outstanding shares of our common stock.

Messrs. Simpson and Fitzmyers have substantial influence with respect to the election of our directors and are also expected to continue to exercise substantial control over some fundamental changes affecting us, such as a merger or sale of assets or amendment of our Certificate of Incorporation or Bylaws.

Any issuance of preferred stock may dilute your investment and reduce funds available for dividends.

Our Board of Directors is authorized by our Certificate of Incorporation to determine the terms of one or more series of preferred stock and to authorize the issuance of shares of any such series on such terms as our Board of Directors may approve. Any such issuance could be used to impede an acquisition of our business that our Board of Directors does not approve, further dilute the equity investments of holders of our common stock and reduce funds available for the payment of dividends to holders of our common stock.

Our stock price is likely to be volatile and could drop.

The trading price of our common stock could be subject to wide fluctuations in response to period to period variations in operating results, changes in earnings estimates by analysts, announcements of technological innovations or new products by us or our competitors, general conditions in the construction and construction materials industries, relatively low trading volume in our common stock and other events or factors. In addition, the stock market is subject to extreme price fluctuations. This volatility has had a substantial effect on the market prices of securities issued by many companies for reasons unrelated to the operating performance of those companies. Securities market fluctuations may materially and adversely affect the market price of our common stock.

Future sales of common stock could adversely affect our stock price.

Sales of substantial amounts of our common stock in the public market could adversely affect the prevailing market price for our common stock. All of the outstanding shares of our common stock are freely tradable without restriction under the Securities Act of 1933, other than 11.4 million shares held (as of February 25, 2008) by our affiliates, as that term is defined in Rule 144 under the Securities Act of 1933. Options to purchase 2.7 million shares of our common stock were outstanding as of December 31, 2007, including options to purchase 2.1 million shares that were exercisable. If a substantial number of shares were sold in the public market pursuant to Rule 144 or on exercise of options, the trading price of our common stock in the public market could be adversely affected.

Delaware law and our stockholder rights plan contain anti-takeover provisions that could deter takeover attempts that might otherwise be beneficial to our stockholders.

Provisions of Delaware law could make it more difficult for a third party to acquire us, even if doing so would be beneficial to our stockholders. Section 203 of the Delaware General Corporation Law may make the acquisition of Simpson Manufacturing Co., Inc. and the removal of incumbent officers and directors more difficult by prohibiting stockholders holding 15% or more of our outstanding voting stock from acquiring Simpson Manufacturing Co., Inc. without the consent of our Board of Directors for at least three years from the date they first hold 15% or more of the voting stock. Barclay Simpson and his affiliates are not subject to this provision of Delaware law with respect to their investment in Simpson Manufacturing Co., Inc. In addition, our Stockholder Rights Plan has significant anti-takeover

effects by causing substantial dilution to a person or group that attempts to acquire us on terms not approved by our Board of Directors.

We are subject to a number of significant risks that might cause our actual results to vary materially from our plans, targets or projections, including:

- lack of market acceptance of new products;
- failing to develop new products with significant market potential;
- increased labor costs, including significant increases in worker's compensation insurance premiums and health care benefits;
- failing to continue to increase net revenues and operating income;
- failing to anticipate, appropriately invest in and effectively manage the human, information technology and logistical resources necessary to support the growth of our business, including managing the costs associated with such resources;
- failing to integrate, leverage and generate expected rates of return on investments, including expansion of existing businesses and expansion through acquisitions;
- failing to generate sufficient future positive operating cash flows and, if necessary, secure adequate external financing to fund our growth; and
- interruptions in service by common carriers that ship goods within our distribution channels.

If we change significantly the location, nature or extent of some of our manufacturing operations, we may reduce our net income.

If we decide to change significantly the location, nature or extent of a portion of our manufacturing operations, we may need to record an impairment of our goodwill. Our goodwill totaled \$57.4 million at December 31, 2007. Recording an impairment of our goodwill correspondingly reduces our net income. In 2007, for example, we decided to move part of our Canadian manufacturing operations to China in 2008 or 2009, and as a result, we recorded a goodwill impairment of \$10.7 million, which materially reduced our net income in 2007. Other

changes or events in the future could further impair our recorded goodwill, which could also materially and adversely affect our profitability.

Failure of our internal control over financial reporting could harm our business and financial results.

Our management is responsible for establishing and maintaining adequate internal control over financial reporting. Internal control over financial reporting is a process to provide reasonable assurance regarding the reliability of financial reporting for external purposes in accordance with accounting principles generally accepted in the United States. Internal control over financial reporting includes

- maintaining records that in reasonable detail accurately and fairly reflect our transactions;
- providing reasonable assurance that transactions are recorded as necessary for preparation of the consolidated financial statements;
- providing reasonable assurance that receipts and expenditures of our assets are made in accordance with management authorization;
and
- providing reasonable assurance that unauthorized acquisition, use or disposition of our assets that could have a material effect on our consolidated financial statements would be prevented or detected on a timely basis.

Because of the inherent limitations of internal control, our internal control over financial reporting might not detect or prevent misstatement of our consolidated financial statements. Our growth and entry into new, globally dispersed markets puts significant additional pressure on our system of internal control over financial reporting. Failure to maintain an effective system of internal control over financial reporting could limit our ability to report our financial results accurately and timely or to detect and prevent fraud.

Failure of our accounting systems could harm our business and financial results.

We are currently implementing a new commercially available Microsoft third-party accounting software system, initially focused on replacing our internally developed general ledger and purchasing and payables systems. We have been testing the new general ledger system and plan to begin using the new systems in 2008. Any errors or defects in, or unavailability of, third-party software or our implementation of the systems, could result in errors in our financial statements, which could materially and adversely affect our business. If we are unable to implement the new accounting software systems, we would be required to write-off the value of capitalized software costs and correspondingly reduce our income. The amount capitalized at December 31, 2007, was \$1.2 million. If we continue to use our internally developed accounting systems and they are not able to accommodate our future business needs, or if we find that they or any new systems we may implement contain errors or defects, our business and financial condition could be materially and adversely affected.

Our international operations may be materially and adversely affected by factors beyond our control.

Economic, social and political conditions, laws, practices and customs vary widely among the countries where we sell our products. Our operations outside of the United States are subject to a number of risks and potential costs, including, for example, lower profit margins, less protection of intellectual property and economic, political and social uncertainty in some countries, especially in emerging markets. Our sales and profits depend, in part, on our ability to develop and implement policies and strategies that effectively anticipate and manage these and other risks in the countries where we do business. These and other risks may have a material adverse effect on our operations in any particular country and on our business as a whole. Inflation in emerging markets also makes our products more expensive there and increases the market and credit risks to which we are exposed.

Our international operations depend on our successful management of our subsidiaries outside of the United States.

We conduct most of our international business through wholly owned subsidiaries. Managing distant subsidiaries and fully integrating them into our business is challenging. We cannot directly supervise every aspect of the operations of our subsidiaries operating outside the United States. As a result, we rely on local managers and staff. Cultural factors and language differences can result in misunderstandings among internationally dispersed personnel. The risk that unauthorized conduct may go undetected may be greater in subsidiaries outside of the United States. These problems could adversely affect our sales and profits.

If we fail to keep pace with advances in our industry or fail to persuade customers to adopt new products we introduce, customers may not buy our products, which would adversely affect our sales and profits.

Constant development of new technologies and techniques, frequent new product introductions and strong price competition characterize the construction industry. The first company to introduce a new product or technique to the market gains a competitive advantage. Our future growth depends, in part, on our ability to develop products that are more effective, safer, or incorporate emerging technologies better than our competitors' products. Sales of our existing products may decline rapidly if a competitor were to introduce superior products, or even if we announce a new product of our own. If we fail to make sufficient investments in research and development or if we focus on technologies that do not lead to better products, our current and planned products could be surpassed by more effective or advanced products. If we fail to manufacture our products economically and market them successfully, our sales and profits would be materially and adversely affected.

Changes in accounting standards could materially and adversely affect our financial results.

The accounting rules applicable to public companies are subject to frequent revision. Future changes in accounting standards and interpretations could require us to change the way we calculate income, expense or balance sheet data, which could result in material and adverse change to our reported results of operations or financial condition.

Global warming could materially and adversely affect our business.

Scientific reports indicate that, as a result of human activity

- temperatures around the world have been increasing and are likely to continue to increase as a result of increasing atmospheric concentrations of carbon dioxide and other carbon compounds,

- the frequency and severity of storms, and flooding, are likely to increase,
- severe weather is likely to occur in places where the climate has historically been more mild, and
- average sea levels have risen and are likely to rise more, threatening worldwide coastal development.

We cannot predict the effects that these phenomena may have on our business. They might, for example

- depress or reverse economic development,
- reduce the demand for construction,
- increase the cost and reduce the availability of fresh water,
- destroy forests, increasing the cost and reducing the availability of wood products used in construction,
- increase the cost and reduce the availability of raw materials and energy,
- increase the cost of capital,
- increase the cost and reduce the availability of insurance covering damage from natural disasters, and
- lead to new laws and regulations that increase our expenses and reduce our sales.

Any of these consequences, and other consequences of global warming that we do not foresee, could materially and adversely affect our sales, profits and financial condition.

We are subject to international tax laws that could affect our financial results.

We conduct international operations through our subsidiaries. Tax laws affecting international operations are complex and subject to change. Our income tax liabilities in the different countries where we operate depend in part on internal settlement prices and administrative charges among us and our subsidiaries. These arrangements require us to make judgments with which tax authorities may disagree. Tax authorities may impose additional taxes, penalties and interest on us. In addition, transactions that we have arranged in light of current tax rules could have material and adverse consequences if tax rules change.

If we are unable to protect our information systems against data corruption, cyber-based attacks or network security breaches, our operations could be disrupted.

We depend on information technology networks and systems, including the Internet, to process, transmit and store electronic information. We depend on our information technology infrastructure for electronic communications among our locations around the world and between our personnel and our subsidiaries, customers and suppliers. Security breaches of this infrastructure could create system disruptions, shutdowns or unauthorized disclosure of confidential information. Security breaches could disrupt our operations, and we could suffer financial damage or loss because of lost or misappropriated information.

Item 1B. Unresolved Staff Comments.

None.

Item 2. Properties.

The Company maintains its home office in Pleasanton, California, and other offices, manufacturing and warehouse facilities elsewhere in California and in Texas, Ohio, Florida, Mississippi, Illinois, Connecticut, Washington, Tennessee, Minnesota, North Carolina, Oregon, Massachusetts, Maryland, Australia, British Columbia, Ontario, England, Scotland, France, Denmark, Germany, Austria, Poland, China and Hong Kong. As of February 29, 2008, the Company's facilities were as follows:

Location	Approximate Square Footage	Owned or Leased	Lessee	Lease Expires	Segment and Function
Pleasanton, California	89,000	Owned			Company Office, SST Research and Development
Stockton, California	802,000	Owned			SST Office, Manufacturing and Warehouse

(1) Lessee is Simpson Strong-Tie International, Inc., a wholly-owned subsidiary of SST.

(2) Property is leased to a third party. Lease expires in December 2008 and the Company expects to occupy it thereafter.

(3) Lessee is Simpson Strong-Tie Canada, Ltd., a wholly-owned subsidiary of SST.

(4) Lessee is **Simpson Strong-Tie Sp.z.o.o.**, a wholly-owned subsidiary of SST.

- (5) Lessee is Simpson Strong-Tie Australia Pty. Ltd., a wholly-owned subsidiary of SST.

- (6) Lessee is Simpson Strong-Tie GmbH, a wholly-owned subsidiary of SST.

- (7) Lessee is Simpson Strong-Tie Asia Limited, a wholly-owned subsidiary of SST.

The Company's manufacturing facilities are equipped with specialized equipment and use extensive automation. The Company considers its existing and planned facilities to be suitable and adequate for its operations as currently

conducted and as planned through 2008. The manufacturing facilities currently are being operated with one full shift and at most plants with at least a partial second shift. The Company anticipates that it may require additional facilities to accommodate possible future growth.

The Company plans to construct a 175,000 sq. ft. manufacturing and distribution facility in Shanghai, China. The Company has classified its facilities in San Leandro, California, and its vacant factory in McKinney, Texas, as assets held for sale and hopes to sell these properties in 2008. The Company is planning to close its Vicksburg facility in 2009.

Item 3. Legal Proceedings.

From time to time, the Company is involved in litigation that it considers to be in the normal course of its business. No such litigation within the last five years resulted in any material loss. The Company is not engaged in any legal proceedings as of the date hereof, which the Company expects individually or in the aggregate to have a material adverse effect on the Company's financial condition, cash flows or results of operations.

Item 4. Submission of Matters to a Vote of Security Holders.

No matters were submitted to a vote of security holders during the fourth quarter of the fiscal year covered by this report.

PART II

Item 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities.

The Company's common stock is listed on the New York Stock Exchange (NYSE) under the symbol SSD. The following table shows the range of high and low closing sale prices per share of the common stock as reported by the NYSE and dividends paid per share of common stock for the calendar quarters indicated:

Quarter	Market Price		Dividends Paid
	High	Low	
2007			
Fourth	\$ 33.55	\$ 25.59	\$ 0.10
Third	37.15	28.78	0.10
Second	33.88	31.16	0.10
First	35.58	29.49	0.08
2006			
Fourth	\$ 32.20	\$ 26.07	\$ 0.08
Third	35.91	25.13	0.08
Second	44.94	32.99	0.08
First	43.58	37.77	0.08

The Company estimates that as of February 25, 2008, approximately 65,000 persons beneficially owned shares of the Company's common stock either directly or through nominees.

In February 2008, the Company's Board of Directors declared a dividend of \$0.10 per share to be paid on April 24, 2008, to stockholders of record on April 3, 2008. The Company currently intends to continue paying dividends quarterly. The Company began declaring quarterly dividends of \$0.05 per common share in January 2004. Future dividends, if any, will be determined by the Company's Board of Directors, based on the Company's earnings, cash flow, financial condition and other factors deemed relevant by the Board of Directors.

In December 2007, the Board of Directors authorized the Company to repurchase up to \$50.0 million of the Company's common stock. The authorization will remain in effect through the end of 2008. This replaces the \$50.0

million repurchase authorization from February 2007. In February 2007, the Company repurchased 122,500 shares of its common stock for \$4.2 million. These shares were retired by the Company in March 2007. During 2006, the Company repurchased 500,000 shares of its common stock for \$17.2 million under the 2005 authorization. In June 2006, the Company retired the 500,000 shares of treasury stock with the excess over the par value of the common stock recorded against retained earnings. The Company did not repurchase any shares in 2005.

The following table sets forth certain information as of December 31, 2007, concerning (a) all equity compensation plans of the Company previously approved by the stockholders and (b) all equity compensation plans of the Company not previously approved by the stockholders.

Plan Category	(a) Number of securities to be issued upon exercise of outstanding options, warrants & rights	(b) Weighted-average exercise price of outstanding options, warrants & rights	(c) Number of securities remaining available for future issuance under equity compensation plans (excluding securities reflected in column (a))
Equity compensation plans approved by stockholders	2,655,570(1) \$	27.91	7,237,672(2)
Equity compensation plans not approved by stockholders	0	N/A	103,500(3)
Total	2,655,570 \$	27.91	7,341,172

(1) Excludes an additional 40,000 shares subject to options granted under the Company's 1994 Stock Option Plan on February 13, 2008.

(2) Includes 40,000 shares subject to options granted under the Company's 1994 Stock Option Plan on February 13, 2008.

(3) Excludes an additional 9,500 shares issued on January 2, 2008, under the Company's 1994 Employee Stock Bonus Plan. As of December 31, 2007, the Company had reserved 200,000 shares of common stock for issuance as bonuses under the 1994 Employee Stock Bonus Plan, of which 96,500 shares had been issued.

In accordance with section 303A.12(a) of the New York Stock Exchange Listed Company Manual, the Company's Chief Executive Officer submitted to the NYSE an unqualified certification. In addition, the Company filed as Exhibit 31 to its 2006 Annual Report on Form 10-K, the Sarbanes-Oxley Act of 2002 Section 302 certification regarding the quality of the Company's public disclosure.

Company Stock Price Performance

The graph below compares the cumulative total stockholder return on the Company's common stock from December 31, 2002, through December 31, 2007, with the cumulative total return on the S & P 500 Index and the Dow Jones Building Materials Index over the same period (assuming the investment of \$100 in the Company's common stock and in each of the indices on December 31, 2002, and reinvestment of all dividends).

COMPARISON OF 5 YEAR CUMULATIVE TOTAL RETURN*

Among Simpson Manufacturing Co., Inc., The S&P 500 Index

And The Dow Jones US Building Materials & Fixtures Index

*\$100 invested on 12/31/02 in stock or index-including reinvestment of dividends. Fiscal year ending December 31.

Item 6. Selected Financial Data.

The following table sets forth selected consolidated financial information with respect to the Company for each of the five years ended December 31, 2007, 2006, 2005, 2004 and 2003 (presented in thousands, except per share amounts), derived from the audited Consolidated Financial Statements of the Company, the most recent three years of which appear elsewhere herein. As of January 1, 2003, the Company commenced expensing its stock options with the adoption of Statement of Financial Accounting Standards (SFAS) No. 148, Accounting for Stock-Based Compensation Transition and Disclosure. The Company adopted Financial Accounting Standards Board (FASB) Interpretation No. 48, Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 (FIN 48), on January 1, 2007. The presentation of the information in the tables below complies with the accounting pronouncements, but is not necessarily comparable with prior years. In November 2004, the Company completed a 2-for-1 stock split effected in the form of a stock dividend of its common stock. All of the share and per-share numbers have been adjusted to reflect these stock splits. The data presented below should be read in conjunction with the Consolidated Financial Statements and related Notes thereto and Item 7 Management's Discussion and Analysis of Financial Condition and Results of Operations included elsewhere herein.

Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations.

This document contains forward-looking statements, based on numerous assumptions and subject to risks and uncertainties. Although the Company believes that the forward-looking statements are reasonable, it does not and cannot give any assurance that its beliefs and expectations will prove to be correct. Many factors could significantly affect the Company's operations and cause the Company's actual results to be substantially different from the Company's expectations. See Item 1A - Risk Factors. Actual results might differ materially from results suggested by any forward-looking statements in this report. The Company does not have an obligation to publicly update any forward-looking statements, whether as a result of the receipt of new information, the occurrence of future events or otherwise.

The following is a discussion and analysis of the consolidated financial condition and results of operations for the Company for the years ended December 31, 2007, 2006 and 2005, and of certain factors that may affect the Company's prospective financial condition and results of operations. The following should be read in conjunction with the Consolidated Financial Statements and related Notes appearing elsewhere herein.

Overview

The Company's net sales decreased to \$817.0 million in 2007 from \$846.3 million in 2005, reflecting slower homebuilding activity. Net sales decreased in 2007 from 2005 in all regions of the United States, with above average rates of decline in California and the southeastern and midwestern portions of the country, although net sales to home centers increased slightly over the same period. Expansion into international markets helped to offset the sales decline in the United States over the last three years. Sales outside of the United States have increased significantly, due in large part to the acquisition of BMF Bygningsbeslag A/S (BMF) in January 2001 and to the acquisition MGA Construction Hardware & Steel Fabricating Limited and MGA Connectors Limited (collectively, MGA) in May 2003. Gross profit margin decreased to 37.4% in 2007 from 39.1% in 2005 primarily due to increased material cost, mainly steel, and a higher proportion of fixed overhead costs.

In recent years, home centers have been one of the Company's fastest growing distribution channels. A large part of that growth was sales to The Home Depot, which exceeded 10% of the Company's consolidated net sales in each of the last three years (see Item 1A Risk Factors and Note 14 to the Company's Consolidated Financial Statements). Consolidation of retailers and distributors has occurred over time. While the consolidation of these large retailers and distributors provides the Company with opportunities for growth, the increasing size and importance of individual customers exposes Simpson Strong-Tie to potential over-dependence. The loss of any of the larger home centers and distributors as customers would have a material adverse effect on SST, unless and until either such customers are replaced or SST makes the necessary adjustments (if possible) to compensate for the loss of business.

Results of Operations

The following table sets forth, for the years indicated, the percentage of net sales of certain items in the Company's Consolidated Statements of Operations.

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

	Years Ended December 31,		
	2007	2006	2005
Net sales	100.0%	100.0%	100.0%
Cost of sales	62.6%	60.0%	60.9%
Gross profit	37.4%	40.0%	39.1%
Research and development and other engineering	2.5%	2.2%	1.7%
Selling expense	9.3%	8.4%	7.6%
General and administrative expense	10.8%	10.7%	11.8%
Impairment of goodwill	1.3%		
Loss (gain) on sale of assets	(0.1)%		(0.2)%
Income from operations	13.6%	18.7%	18.2%
Interest income, net	0.7%	0.4%	0.2%
Income before income taxes	14.3%	19.1%	18.4%
Provision for income taxes	5.9%	7.2%	6.8%
Net income	8.4%	11.9%	11.6%

In December 2007, the Board of Directors authorized the Company to repurchase up to \$50.0 million of the Company's common stock. The authorization will remain in effect through the end of 2008. This replaces the \$50.0 million repurchase authorization from February 2007. In February 2007, the Company repurchased 122,500 shares of its common stock for \$4.2 million. The Company retired these shares in March 2007. During 2006, the Company purchased 500,000 shares of its common stock for \$17.2 million under the 2005 authorization. There were no repurchases made by the Company during 2005.

Comparison of the Years Ended December 31, 2007 and 2006

Net Sales

In 2007, net sales decreased 5.4% to \$817.0 million from \$863.2 million in 2006. In 2007, sales declined throughout the United States, while sales in Europe and Canada increased. Simpson Strong-Tie's sales to contractor and dealer distributors had the largest percentage rate decreases in 2007, reflecting slower homebuilding activity, while sales to home centers were flat. Sales decreased in 2007 across most of Simpson Strong-Tie's major product lines, particularly those used in new home construction. Sales of all of Simpson Dura-Vent's product lines decreased in 2007 when compared to 2006.

Gross Profit

Gross profit decreased 11.5% from \$345.3 million in 2006 to \$305.5 million in 2007. As a percentage of net sales, gross profit decreased from 40.0% in 2006 to 37.4% in 2007. This decrease was primarily due to higher manufacturing costs and a higher proportion of fixed overhead costs to total costs, resulting primarily from the lower sales volume.

The Company continues to face uncertainty in the cost and availability of steel. Several factors are contributing to this uncertainty. Global demand and high raw material and energy prices have led the Company to believe that steel prices are likely to increase further in the near term. In addition, major domestic integrated steel producers have consolidated over the last several years. To mitigate the effect of the rising steel prices, the Company had sales price increases in 2007. If steel prices increase and the Company is not able to maintain its prices or increase them sufficiently, the Company's margins could deteriorate further.

Research and Development and Other Engineering

Research and development and other engineering expenses increased 4.5% from \$19.3 million in 2006 to \$20.1 million in 2007. This increase was primarily due to additional staff, incentive pay, and other personnel costs, totaling \$0.5 million.

Selling Expense

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

Selling expenses increased 5.2% from \$72.2 million in 2006 to \$76.0 million in 2007. The increase was driven primarily by a \$5.1 million increase in expenses associated with sales and marketing personnel, the payment of a one-time \$1.0 million commitment as a co-sponsor of a new exhibit at INNOVENTIONS at *Epcot*[®] at the *Walt Disney World*[®] Resort in Florida and the donation of \$0.6 million in cash and products (expensed at cost) primarily to Habitat for Humanity International, Inc. The INNOVENTIONS exhibit is intended to educate homeowners about severe weather preparedness and mitigation as well as showcase various products and techniques they can use to build weather resistant housing. These increases were partly offset by a decrease in promotional expenses of \$2.0 million and decreased agent commissions, primarily as a result of lower Simpson Dura-Vent sales, of \$1.1 million.

General and Administrative Expense

General and administrative expenses decreased 3.7% from \$92.0 million in 2006 to \$88.6 million in 2007. The major components of the decrease were reduced cash profit sharing of \$9.7 million and lower expenses related to the relocation of the Company's home office in the second quarter of 2006, of \$0.9 million. These decreases were partly offset by an increase in depreciation and amortization charges totaling \$2.3 million and higher administrative personnel costs of \$2.1 million, both of which included incremental expenses associated with the acquisition of Swan Secure. Legal and professional services fees also increased by \$0.9 million over the prior year. The Company

believes that the pre-tax stock option expense for 2008 will be \$3.6 million related to stock options granted during 2005, 2006, 2007 and 2008.

Impairment of Goodwill

In 2007, the Company recorded a goodwill impairment charge of \$10.7 million, primarily as a result of decreased future cash flows of its Canada unit that will result from the planned move in late 2008 or early 2009 of part of its production from Canada to a new facility to be constructed in China. The decision to move the production was made in October 2007. The method to determine the fair value of the Canadian reporting unit was a discounted cash flow model supported by market approaches, which were based on earnings multiples realized by similar public companies and on representative merger and acquisition transactions of a similar nature and industry. See *Critical Accounting Policies and Estimates* *Goodwill Impairment Testing*.

Interest Income and Expense

Interest income is generated on the Company's cash and cash equivalents balances. Interest income increased primarily as a result of higher interest rates. Interest expense includes interest, account maintenance fees and bank charges.

Provision for Income Taxes

The Company's effective tax rate was 41.0% in 2007, up from 37.8% in 2006. The effective tax rate increased primarily because the majority of the \$10.7 million goodwill impairment charge is not deductible for tax purposes.

Connector Products *Simpson Strong-Tie (SST)*

Simpson Strong-Tie's income from operations decreased 26.6% from \$155.7 million in 2006 to \$114.4 million in 2007.

Net Sales

In 2007, Simpson Strong-Tie's net sales decreased 3.3% to \$745.7 million from \$771.2 million in 2006. SST accounted for 91.3% of the Company's total net sales in 2007, an increase from 89.3% in 2006. The decrease in net sales at SST resulted from a decrease in sales volume, partly offset by an increase in average prices of 6%. In 2007, sales declined throughout the United States, with the exception of the Midwest, which was up slightly and the Northeast, which was flat, while sales in Europe and Canada increased. Simpson Strong-Tie's sales to contractor and dealer distributors had the largest percentage rate decreases in 2007, reflecting slower homebuilding activity, while sales to home centers increased slightly. Sales decreased in 2007 across most of Simpson Strong-Tie's major product lines, particularly those used in new home construction.

Gross Profit

Simpson Strong-Tie's gross profit decreased 8.8% to \$296.2 million in 2007 from \$324.9 million in 2006. As a percentage of net sales, gross profit decreased to 39.7% in 2007 from 42.1% in 2006. This decrease was primarily due to higher manufacturing costs, including material costs, and to higher fixed overhead costs as a percentage of sales as a result of the lower sales volume.

Selling Expense

Simpson Strong-Tie's selling expense increased 8.0% to \$68.8 million in 2007 from \$63.7 million in 2006. The increase was driven primarily by a \$3.4 million increase in expenses associated with sales and marketing personnel, the INNOVENTIONS one-time \$1.0 million payment and the donation of \$0.6 million in cash and products (expensed at cost) primarily to Habitat for Humanity International, Inc.

General and Administrative Expense

Simpson Strong-Tie's general and administrative expense decreased 3.1% to \$84.2 million in 2007 from \$86.8 million in 2006. The decrease was primarily due to reduced cash profit sharing expenses included in administrative expenses totaling \$9.3 million, partly offset by increases in depreciation and amortization costs of \$2.2 million,

which included incremental expenses associated with the acquisition of Swan Secure in July 2007, bad debt expense of \$0.6 million, and professional service expenses of \$0.7 million.

European Operations

For its European operations, Simpson Strong-Tie recorded after-tax net income of \$2.4 million in 2007 compared to after-tax net income of \$4.4 million in 2006.

Venting Products Simpson Dura-Vent (SDV)

Simpson Dura-Vent's income from operations decreased from \$7.2 million in 2006 to a loss of \$2.6 million in 2007.

Net Sales

In 2007, Simpson Dura-Vent's net sales decreased 22.5% to \$71.3 million as compared to net sales of \$92.0 million in 2006. SDV accounted for 8.7% of the Company's total net sales in 2007, a decrease from 10.7% in 2006. The decrease in net sales at SDV resulted from a decrease in sales volume, partly offset by price increases that averaged 6%. Sales were down in all regions of the United States in 2007 compared to 2006. Sales to all distribution channels were down in 2007 as compared to 2006. Sales of all of Simpson Dura-Vent's product lines decreased in 2007 when compared to 2006.

Gross Profit

Simpson Dura-Vent's gross profit decreased 54.4% to \$9.4 million in 2007 from \$20.5 million in 2006. As a percentage of net sales, gross profit decreased to 13.1% in 2007 from 22.3% in 2006. This decrease was primarily due to higher manufacturing costs and by higher fixed overhead costs as a percentage of sales as a result of the lower sales volume.

Selling Expense

Simpson Dura-Vent's selling expense decreased 15.2% to \$6.9 million in 2007 from \$8.2 million in 2006 primarily due to decreased agent commissions, on lower Simpson Dura-Vent sales, of \$1.0 million.

Administrative and All Other (Company)

Interest Income and Expense

Interest income is generated on the Company's cash and cash equivalents balances. Interest income increased primarily as a result of higher interest rates. Interest expense includes interest, account maintenance fees and bank charges.

Comparison of the Years Ended December 31, 2006 and 2005

Net Sales

In 2006, net sales increased 2.0% to \$863.2 million as compared to net sales of \$846.3 million in 2005. Although the Company's net sales increased for the year, net sales in the third and fourth quarters of 2006 decreased compared to the same quarters of 2005. The majority of the Company's sales growth in the United States occurred only in the Southeast and sales were flat elsewhere, with the exception of California, where sales decreased. Sales in Canada and continental Europe were strong and sales in the United Kingdom were up only marginally. Sales to home centers and dealer and contractor distributors in total were flat in 2006. Sales were mixed across Simpson Strong-Tie's major product lines. Simpson Strong-Tie's Quik Drive and Anchor Systems product lines both had increases in sales while sales of products used primarily in new home construction, including the Strong-Wall product line, decreased. Sales of Simpson Dura-Vent's pellet vent and chimney product lines both increased in 2006, while sales of its gas vent and Direct-Vent products in 2006 decreased when compared to 2005.

Gross Profit

Gross profit increased 4.4% to \$345.3 million in 2006 from \$330.8 million in 2005. As a percentage of net sales, gross profit increased to 40.0% in 2006 from 39.1% in 2005. This increase was primarily due to lower manufacturing costs, partly offset by higher fixed overhead costs as a percentage of sales as a result of the lower sales volume in the second half of the year.

The Company faced uncertainty in the cost and availability of steel. Several factors contributed to this uncertainty. High raw material and energy prices led the Company to believe that steel prices were likely to remain at increased levels in the near term. In addition, major domestic integrated steel producers have consolidated over the last several years. To mitigate the effect of the rising steel prices and to avoid possible shortages in supply, the Company increased its purchasing efforts in the second half of 2006. In addition, the Company had sales price increases in 2006, to offset the rising cost of steel.

Research and Development and Other Engineering

Research and development and other engineering expenses increased 32.1% from \$14.6 million in 2005 to \$19.3 million in 2006. This increase was primarily due to additional staff, incentive pay, other personnel costs and product testing, totaling \$4.5 million.

Selling Expense

Selling expenses increased 12.3% from \$64.3 million in 2005 to \$72.2 million in 2006. The increase was driven primarily by a \$4.9 million increase in expenses associated with sales and marketing personnel and a \$1.8 million increase in promotional costs.

General and Administrative Expense

General and administrative expenses decreased 8.3% from \$100.3 million in 2005 to \$92.0 million in 2006. The decrease was primarily due to reduced cash profit sharing and stock compensation costs included in administrative expenses totaling \$14.0 million, partly offset by increases in other personnel costs of \$2.6 million, facility relocation expenses of \$1.5 million and professional service expenses of \$1.1 million.

Interest Income and Expense

Interest income is generated on the Company's cash and cash equivalents balances. Interest income increased primarily as a result of higher interest rates. Interest expense includes interest, account maintenance fees and bank charges.

Provision for Income Taxes

The Company's effective tax rate was 37.8% in 2006, up from 36.8% in 2005. The effective tax rates exceeded the federal statutory rate of 35.0%, primarily due to the effect of state income taxes, net of the federal benefit.

Connector Products - Simpson Strong-Tie (SST)

Simpson Strong-Tie's income from operations increased 6.6% to \$155.7 million in 2006 from \$146.1 million in 2005.

Net Sales

In 2006, Simpson Strong-Tie's net sales increased 2.5% to \$771.2 million as compared to net sales of \$752.2 million in 2005. SST accounted for 89.3% of the Company's total net sales in 2006, an increase from 88.9% in 2005. The increase in net sales at SST resulted from an increase in average prices of 4%, partly offset by a decrease in sales volume. The majority of the sales growth in the United States occurred in the Southeast and sales were up slightly elsewhere, with the exception of California, where sales decreased. Sales in Canada and continental Europe were strong and sales in the United Kingdom were up only marginally. Sales to home centers and dealer and contractor distributors in total were flat in 2006, while sales to lumber dealers were up. Sales were mixed across major product

lines. The Quik Drive and Anchor Systems product lines both had increases in sales while sales of products used primarily in new home construction, including the Strong-Wall product line, decreased.

Gross Profit

Simpson Strong-Tie's gross profit increased 5.5% to \$324.9 million in 2006 from \$307.9 million in 2005. As a percentage of net sales, gross profit increased to 42.1% in 2006 from 40.9% in 2005. This increase was primarily due to lower manufacturing costs, partly offset by higher fixed overhead costs as a percentage of sales as a result of the lower sales volume in the second half of the year.

Research and Development and Other Engineering

Simpson Strong-Tie's research and development and other engineering expense increased 32.7% to \$18.4 million in 2006 from \$13.8 million in 2005. This increase was primarily due to additional staff, incentive pay, other personnel costs and product testing, totaling \$4.4 million.

Selling Expense

Simpson Strong-Tie's selling expense increased 13.5% to \$63.7 million in 2006 from \$56.1 million in 2005. The increase was driven primarily by a \$4.3 million increase in expenses associated with sales and marketing personnel and a \$1.8 million increase in promotional costs.

General and Administrative Expense

Simpson Strong-Tie's general and administrative expense decreased 7.6% to \$86.8 million in 2006 from \$94.0 million in 2005. The decrease was primarily due to reduced cash profit sharing expense included in administrative expenses totaling \$10.2 million, partly offset by increases in other personnel costs of \$4.4 million, facility relocation expenses of \$1.3 million and professional service expenses of \$0.4 million.

European Operations

For its European operations, Simpson Strong-Tie recorded after-tax net income of \$4.4 million in 2006 compared to after-tax net income of \$2.2 million in 2005.

Venting Products - Simpson Dura-Vent (SDV)

Simpson Dura-Vent's income from operations decreased 17.1% to \$7.2 million in 2006 from \$8.7 million in 2005.

Net Sales

In 2006, Simpson Dura-Vent's net sales decreased 2.2% to \$92.0 million as compared to net sales of \$94.0 million in 2005. SDV accounted for 10.7% of the Company's total net sales in 2006, a decrease from 11.1% in 2005. The decrease in net sales at SDV resulted from a decrease in sales volume, partly offset by price increases that averaged 5%. Sales were down in all regions of the United States in 2006 compared to 2005, with the exception of the western region, excluding California, and in the Midwest, where sales were up slightly. Sales to home centers were up in 2006, while sales to dealers and original equipment manufacturers were down. Sales of pellet vent and chimney product lines both increased in 2006, while sales of gas vent and Direct-Vent products in 2006 decreased when compared to 2005.

Gross Profit

Simpson Dura-Vent's gross profit decreased 10.5% to \$20.5 million in 2006 from \$22.9 million in 2005. As a percentage of net sales, gross profit decreased to 22.3% in 2006 from 24.4% in 2005. This decrease was primarily due to higher manufacturing costs and by higher fixed overhead costs as a percentage of sales as a result of the lower sales volume in 2006 when compared to 2005.

General and Administrative Expense

Simpson Dura-Vent's general and administrative expense decreased 20.7% to \$4.1 million in 2006 from \$5.2 million in 2005. The decrease was primarily due to reduced cash profit sharing expense included in administrative expense totaling \$0.9 million.

Administrative and All Other (Company)

Interest Income and Expense

Interest income is generated on the Company's cash and cash equivalents balances. Interest income increased primarily as a result of higher interest rates. Interest expense includes interest, account maintenance fees and bank charges.

Critical Accounting Policies and Estimates

The critical policies described below affect the Company's more significant judgments and estimates used in the preparation of the Consolidated Financial Statements. If the Company's business conditions change or if it uses different assumptions or estimates in the application of these and other accounting policies, the Company's future results of operations could be adversely affected.

Inventory Valuation

Inventories are stated at the lower of cost or net realizable value (market). Cost includes all costs incurred in bringing each product to its present location and condition, as follows:

- Raw materials and purchased finished goods — principally valued at cost determined on a weighted average basis.
- In-process products and finished goods — cost of direct materials and labor plus attributable overhead based on a normal level of activity.

The Company applies net realizable value and obsolescence to the gross value of the inventory. The Company estimates net realizable value based on estimated selling price less further costs to completion and disposal. The Company provides for slow moving product by comparing inventories on hand to future projected demand. Obsolete inventory is on-hand supply of a product in excess of two years' sales of that product or

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

a supply of that product that the Company believes is no longer marketable. The Company revalues obsolete inventory as having no net realizable value and reserves for its full carrying value. The Company has consistently applied this methodology. The Company believes that this approach is prudent and makes suitable provisions for slow moving and obsolete inventory. When provisions are established, a new cost basis of the inventory is created.

Comparable inventory values are as follows (in thousands):

	December 31,		
	2007		2006
Gross Inventories:			
Raw materials	\$	82,164	\$ 86,927
In-process products		23,674	24,209
Finished goods		122,842	111,952
Less:			
Slow moving, obsolete and net realizable value provisions		(10,338)	(5,480)
Net inventory valuation	\$	218,342	\$ 217,608

Activity in the inventory reserve is summarized as follows (in thousands):

	Years ended December 31,		
	2007	2006	2005
Beginning balance	\$ 5,480	\$ 5,399	\$ 4,592
Provisions released following disposal of inventory	57		(306)
Additional provisions made	4,801	81	1,113
Ending balance	\$ 10,338	\$ 5,480	\$ 5,399

Unexpected change in market demand, building codes or buyer preferences could reduce the rate of inventory turnover and require the Company to increase its reserve for obsolescence.

Revenue Recognition

The Company recognizes revenue when the earnings process is complete, net of applicable provision for discounts, returns and incentives, whether actual or estimated based on the Company's experience. This generally occurs when products are shipped to the customer in accordance with the sales agreement or purchase order, ownership and risk of loss pass to the customer, collectibility is reasonably assured and pricing is fixed or determinable. The Company's general shipping terms are F.O.B. shipping point, where title is transferred and revenue is recognized when the products are shipped to customers. When the Company sells F.O.B. destination point, title is transferred and the Company recognizes revenue on delivery or customer acceptance, depending on terms of the sales agreement. Service sales, representing aftermarket repair and maintenance and engineering activities, though significantly less than 1% of net sales and not material to the consolidated financial statements, are recognized as the services are completed. If the actual costs of sales returns, incentives and discounts were to significantly exceed the recorded estimated allowance, the Company's sales would be adversely affected.

Allowance for Doubtful Accounts

The Company assesses the collectibility of specific customer accounts that would be considered doubtful based on the customer's financial condition, payment history, credit rating and other factors that the Company considers relevant, or accounts that the Company assigns for collection. The Company reserves for the portion of those outstanding balances that the Company believes it is not likely to collect. Generally, the Company reserves accounts receivable balances that are outstanding more than 90 days. The Company also reserves 100% of the amount that it deems potentially uncollectible due to a customer's bankruptcy or poor financial condition. If the financial condition of the Company's customers were to deteriorate, resulting in inability to make payments, additional allowances may be required.

Activity in the allowance for doubtful accounts is summarized as follows (in thousands):

	Years ended December 31,		
	2007	2006	2005

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

Beginning balance	\$	2,286	\$	2,131	\$	2,397
Adjustments, recoveries and write-offs		(275)		(77)		(132)
Increase (decrease) to bad debt provision		713		232		(134)
Ending balance	\$	2,724	\$	2,286	\$	2,131

Goodwill Impairment Testing

SFAS No. 142, *Goodwill and Other Intangible Assets*, requires that goodwill be tested for impairment at the reporting unit level (operating segment or one level below an operating segment) on an annual basis (in the fourth quarter for the Company) and between annual tests if an event occurs or circumstances change that would more likely than not reduce the fair value of a reporting unit below its carrying value. These events or circumstances could include a significant change in the business climate, legal factors, operating performance indicators, competition, or disposition or relocation of a significant portion of a reporting unit. Application of the goodwill impairment test requires judgment, including the identification of reporting units, assignment of assets and liabilities to reporting units, assignment of goodwill to reporting units, and determination of the fair value of each reporting unit. The fair

value of each reporting unit is estimated using market approaches or discounted cash flow methodology. This requires significant judgments, including estimation of future cash flows, which depends on internal forecasts, estimation of the long-term rate of growth for the Company's business, the useful life over which cash flows will occur, and determination of the Company's weighted average cost of capital. Changes in these estimates and assumptions could materially affect the determination of fair value or goodwill impairment for each reporting unit. Actual cash flows in the future may differ significantly from those assumed. The Company has allocated goodwill to reporting units based on the reporting unit expected to benefit from the acquisition.

In 2007, the Company recorded a goodwill impairment charge of \$10.7 million related to its Canadian reporting unit, resulting primarily from decreased future cash flows due to the planned move of production of certain products from Canada to China in late 2008 or early 2009. The method to determine the fair value of the Canadian reporting unit was a discounted cash flow model supported by market approaches, which were based on earnings multiples realized by similar public companies and on representative merger and acquisition transactions of a similar nature and industry.

Effect of New Accounting Standards

The Company adopted FIN 48, Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 on January 1, 2007. The Company has not yet adopted the provisions of SFAS No. 157, Fair Value Measurements, SFAS No. 159, The Fair Value Option for Financial Assets and Financial Liabilities, SFAS No. 141(R), Business Combinations, and SFAS No. 160, Noncontrolling Interests in Consolidated Financial Statements an amendment of Accounting Research Bulletin No. 51. See Note 1 to the Company's Consolidated Financial Statements.

Liquidity and Sources of Capital

The Company's liquidity needs arise principally from working capital requirements, capital expenditures and business acquisitions. During the three years ended December 31, 2007, the Company relied on internally generated funds to finance these needs. The Company's working capital requirements are seasonal with the highest need typically occurring in the second and third quarters of the year. Cash and cash equivalents were \$186.1 million and \$148.3 million at December 31, 2007 and 2006, respectively. Working capital was \$438.5 million and \$399.1 million at December 31, 2007 and 2006, respectively. As of December 31, 2007, the Company had \$1.0 million in revolving line of credit borrowings and had available to it unused credit facilities of \$205.1 million.

The Company's operating activities provided \$126.8 million, \$99.1 million and \$130.6 million in net cash in 2007, 2006 and 2005, respectively. In 2007, cash was provided by net income of \$68.7 million and noncash expenses, including impairments of goodwill and a long-lived asset, depreciation and amortization, and noncash compensation related to stock plans, totaling \$45.4 million, reductions in trade accounts receivable and inventories of \$13.0 million and \$5.8 million, respectively, and an increase in trade accounts payable of \$3.1 million. These increases were partly offset by decreases in accrued cash profit sharing and commissions and income taxes payable of \$3.7 million and \$3.9 million, respectively, and an increase in deferred income taxes of \$3.7 million. The balance of the cash provided in 2007 resulted from changes in other asset and liability accounts, none of which was material.

The Company's investing activities used \$75.2 million, \$60.5 million and \$21.7 million in net cash in 2007, 2006 and 2005, respectively. Cash paid for asset acquisitions, primarily for the acquisition of Swan Secure in July 2007, was \$42.5 million. Cash paid for capital expenditures was \$36.1 million in 2007, down from \$60.7 million in 2006. The Company used \$16.0 million of these expenditures in 2007 to purchase or improve its real estate, primarily to expand its facilities located in Vacaville and Stockton, California, and to purchase a facility in Maple Ridge, British

Columbia. The Company also used \$13.9 million in 2007 to purchase machinery and equipment for its facilities throughout the United States. The Company plans capital expenditures in 2008 totaling approximately \$23.3 million.

In February 2007, the Company purchased a facility it had been leasing in Maple Ridge, British Columbia, for \$4.0 million. In July 2007, the Company purchased all of the stock of Swan Secure for \$42.1 million, net of cash received. Swan Secure is a manufacturer and distributor of fasteners, largely stainless steel, and its products are marketed throughout the United States. In September 2007, the Company completed the sale of its vacant warehouse in McKinney, Texas, for total proceeds of \$2.5 million.

The Company's vacant facilities in San Leandro, California, and vacant factory in McKinney, Texas, have been classified as assets held for sale. In September 2007, an environmental analysis of the San Leandro property

indicated that it had contamination related to spilled fuel that would require an estimated \$0.3 million to remediate. The clean-up is expected to be completed within 12 months. The Company expects to sell the property after the remediation has been completed. In November 2007, the Company entered into an agreement to sell the vacant factory in McKinney, Texas, for \$1.9 million.

The Company's financing activities used \$17.4 million, \$21.5 million, and \$6.8 million in net cash in 2007, 2006 and 2005, respectively. Uses of cash for financing activities were primarily from payments of cash dividends of \$18.4 million, the repurchase of 122,500 shares of the Company's common stock totaling \$4.2 million to offset the dilution of stock options granted in 2007, and payments on the Company's long-term debt, primarily related to its European operations, of \$6.9 million. Cash provided by financing activities was primarily from line-of-credit borrowings of \$7.2 million and the issuance of the Company's common stock through the exercise of stock options totaling \$4.8 million. In February 2008, the Company's Board of Directors declared a dividend of \$0.10 per share, a total of \$4.9 million, to be paid on April 24, 2008, to stockholders of record on April 3, 2008.

In October 2007, the Company entered into an unsecured credit agreement with a syndicate of banks providing for a 5-year revolving credit facility of \$200 million. The Company has the ability to increase the amount available under the credit agreement by an additional \$200 million, to a maximum of \$400 million, by obtaining additional commitments from existing lenders or new lenders and satisfying certain other conditions. The Company is required to pay an annual facility fee of 0.08% to 0.10% of the available commitments under the credit agreement, regardless of usage, with the applicable fee determined on a quarterly basis based on the Company's leverage ratio. Amounts borrowed under the credit agreement will bear interest at an annual rate equal to either, at the Company's option, (a) the British Bankers Association London Interbank Offered Rate for the appropriate currency appearing on Reuters Screen LIBOR01-02 Page (the LIBO Rate) plus a spread of from 0.27% to 0.40%, as determined on a quarterly basis based on the Company's leverage ratio, or (b) the Base Rate, plus a spread of 0.50%. The Company will pay participation fees for outstanding standby letters of credit at an annual rate equal to the LIBO Rate plus the applicable spreads described in the preceding sentence, and will pay market-based fees for commercial letters of credit. Loans outstanding under the credit agreement may be prepaid at any time without penalty except for LIBO Rate breakage costs and expenses.

The proceeds of loans advanced under the credit agreement and letters of credit issued thereunder may be used for working capital and other general corporate needs of the Company, to pay dividends to the Company's stockholders or to repurchase outstanding securities of the Company as permitted by the credit agreement, and to finance acquisitions by the Company permitted by the credit agreement. No loans or letters of credit are currently outstanding under the credit agreement. The Company and its subsidiaries are required to comply with various affirmative and negative covenants. The covenants include provisions that would limit the availability of funds as a result of a material adverse change to the Company's financial position or results of operations.

The Company is in compliance with its debt covenants.

The Company's contractual obligations, as of December 31, 2007, for future payments are as follows, in thousands:

Contractual Obligation	Total all periods	Less than 1 year	Payments Due by Period		
			1 - 3 years	3 - 5 years	More than 5 years
Line of credit obligations	\$ 1,029	\$ 1,029	\$	\$	\$
Debt interest obligations	819	206	320	293	
Operating lease obligations	22,230	7,242	10,336	4,381	271
Purchase obligations	3,897	3,315	582		

Total	\$	27,975	\$	11,792	\$	11,238	\$	4,674	\$	271
-------	----	--------	----	--------	----	--------	----	-------	----	-----

Purchase obligations consist of commitments primarily related to the construction or expansion of facilities and equipment, consulting agreements, and minimum purchase quantities of certain raw materials. The Company is not a party to any long-term supply contracts with respect to the purchase of raw materials or finished goods. Debt interest obligations include interest payments on fixed term debt, line of credit borrowings and annual maintenance fees on the Company's primary line-of-credit facility. Interest on line-of-credit facilities was estimated based on historical borrowings and repayment patterns. The Company's primary line-of-credit facility includes annual maintenance fees

of that range, depending on the Company's leverage ratio, from 0.08% to 0.10% on the unused portion of the facilities.

The Company adopted Financial Accounting Standards Board (FASB) Interpretation No. 48, Accounting for Uncertainty in Income Taxes, an interpretation of FASB Statement No. 109 (FIN 48) on January 1, 2007. At December 31, 2007, the Company's expected payment for contractual obligations includes \$8.9 million of gross liability for uncertain tax positions associated with the adoption of FIN 48, although the Company cannot estimate the timing of cash settlement of this liability. This amount does not include any amount receivable that may arise from the settlement of the Company's uncertain tax positions. See Notes 1 and 10 to the Company's Consolidated Financial Statements.

Inflation

The Company believes that the effect of inflation on the Company has not been material in recent years, as general inflation rates have remained relatively low. The Company's main raw material, however, is steel, and increases in steel prices may adversely affect the Company's gross margins if it cannot recover the higher costs through price increases.

Item 7A. Quantitative and Qualitative Disclosures About Market Risk

The Company has no variable interest-rate debt investments.

The Company has foreign exchange rate risk in its international operations, primarily Europe and Canada, and through purchases from foreign vendors. The Company does not currently hedge this risk. If the exchange rate were to change by 10% in any one country where the Company has operations, the change in net income would not be material to the Company's operations taken as a whole. The translation adjustment resulted in an increase in accumulated other comprehensive income of \$13.8 million for the year ended December 31, 2007, primarily due to the effect of the weakening of the United States dollar in relation to the European and Canadian currencies.

Item 8. Consolidated Financial Statements and Supplementary Data.

Report of Independent Registered Public Accounting Firm

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

To the Board of Directors and Stockholders of Simpson Manufacturing Co., Inc.:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of Simpson Manufacturing Co., Inc. and its subsidiaries at December 31, 2007 and 2006, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2007 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedule listed in the accompanying index presents fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2007, based on criteria established in *Internal Control - Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). The Company's management is responsible for these financial statements and financial statement schedule, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Item 9A of the 2007 Annual Report. Our responsibility is to express opinions on these financial statements, on the financial statement schedule, and on the Company's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As discussed in Note 1 to the consolidated financial statements, the Company changed the manner in which it accounts for uncertainty in income taxes upon adoption of the accounting guidance of FASB Interpretation No. 48 in 2007 and changed the manner in which it accounts for share-based compensation upon adoption of FAS 123(R) in 2006.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As described in Item 9A of the 2007 Annual Report, management has excluded Swan Secure from its assessment of internal control over financial reporting as of December 31, 2007, because it was acquired by the Company in a stock purchase during 2007. We have also excluded Swan Secure from our audit of internal control over financial reporting. Swan Secure is a division of Simpson Strong-Tie Company Inc. whose total assets and total revenues represent approximately 6% and 2%, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 2007.

Simpson Manufacturing Co., Inc. and Subsidiaries

Notes to Consolidated Financial Statements

1. Operations and Summary of Significant Accounting Policies

Nature of Operations

Simpson Manufacturing Co., Inc., through its subsidiaries Simpson Strong-Tie Company Inc. (Simpson Strong-Tie) and Simpson Dura-Vent Company, Inc. and its other subsidiaries (collectively, the Company), designs, engineers and manufactures wood-to-wood, wood-to-concrete and wood-to-masonry connectors, screw fastening systems and collated screws, stainless steel fasteners, pre-fabricated shearwalls and venting systems for gas and wood burning and alternative fuel appliances. The Company markets its products to the residential construction, light industrial and commercial construction, remodeling and do-it-yourself markets. Simpson Strong-Tie also offers a line of adhesives, mechanical anchors and powder-actuated tools for concrete, masonry and steel.

The Company operates exclusively in the building products industry. The Company s products are sold primarily throughout the United States, Canada and Europe. Revenues have some geographic market concentration on the west coast of the United States. A portion of the Company s business is therefore dependent on economic activity within this region and market. The Company is dependent on the availability of steel, its primary raw material.

Principles of Consolidation

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

The consolidated financial statements include the accounts of Simpson Manufacturing Co., Inc. and its subsidiaries. Investments in 50% or less owned entities are accounted for using either cost or the equity method. The Company consolidates all variable interest entities (VIEs) where it is the primary beneficiary. There were no VIEs as of December 31, 2007. All significant intercompany transactions have been eliminated.

Use of Estimates

The preparation of consolidated financial statements in conformity with accounting principles generally accepted in the United States of America requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the consolidated financial statements and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

Revenue Recognition

The Company recognizes revenue when the earnings process is complete, net of applicable provision for discounts, returns and incentives, whether actual or estimated based on the Company's experience. This generally occurs when products are shipped to the customer in accordance with the sales agreement or purchase order, ownership and risk of loss pass to the customer, collectibility is reasonably assured and pricing is fixed or determinable. The Company's general shipping terms are F.O.B. shipping point, where title is transferred and revenue is recognized when the products are shipped to customers. When the Company sells F.O.B. destination point, title is transferred and the Company recognizes revenue on delivery or customer acceptance, depending on terms of the sales agreement. Service sales, representing aftermarket repair and maintenance and engineering activities, though significantly less than 1% of net sales and not material to the consolidated financial statements, are recognized as the services are completed. If the actual costs of sales returns, incentives, and discounts were to significantly exceed the recorded estimated allowance, the Company's sales would be adversely affected.

Cash Equivalents

The Company considers all highly liquid investments with an original or remaining maturity of three months or less at the time of purchase to be cash equivalents.

Investments

The Company has a minority investment in a privately held company. These kinds of investments are carried either at cost or by the equity method of accounting, depending on the Company's ownership interest and its ability to influence the operating or financial decisions of the investee, and are classified as long-term investments.

The Company periodically reviews its investments for impairment. If the carrying value of an investment exceeds its fair value and the decline in fair value is determined to be other-than-temporary, the Company writes down the value

of the investment to its fair value. The Company generally believes an other-than-temporary decline occurs when the fair value of an investment is below the carrying value for two consecutive quarters.

Allowance for Doubtful Accounts

The Company assesses the collectibility of specific customer accounts that would be considered doubtful based upon the customer's financial condition, payment history, credit rating and other factors that the Company considers relevant, or accounts that the Company assigns for collection. The Company reserves for the portion of those outstanding balances that the Company believes it is not likely to collect. Generally, the Company reserves accounts receivable balances that are outstanding more than 90 days. The Company also reserves 100% of the amount that it deems potentially uncollectible due to a customer's bankruptcy or deteriorating financial condition. If the financial condition of the Company's customers were to deteriorate, resulting in inability to make payments, additional allowances may be required.

Inventory Valuation

Inventories are stated at the lower of cost or net realizable value (market). Cost includes all costs incurred in bringing each product to its present location and condition, as follows:

- Raw materials and purchased finished goods for resale - principally valued at cost determined on a weighted average basis.
- In-process products and finished goods - cost of direct materials and labor plus attributable overhead based on a normal level of activity.

The Company applies net realizable value and obsolescence to the gross value of the inventory. The Company estimates net realizable value based on estimated selling price less further costs to completion and disposal. The Company provides for slow moving product by comparing inventories on hand to future projected demand. Obsolete inventory is on-hand supply of a product in excess of two years' sales of that product or a supply of that product that the Company believes is no longer marketable. The Company revalues obsolete inventory as having no net realizable value and writes off its full carrying value. The Company has consistently applied this methodology. The Company believes that this approach is prudent and makes suitable provisions for slow moving and obsolete inventory.

Sales Incentive and Advertising Allowances

The Company records estimated reductions to revenues for sales incentives, primarily rebates for volume discounts, and allowances for co-operative advertising.

Allowances for Sales Discounts

The Company records estimated reductions to revenues for discounts taken on early payment of invoices by its customers.

Guarantees and Warranties

The Company provides product warranties for specific product lines and accrues for estimated future warranty costs, none of which has been material to the consolidated financial statements, in the period in which the sale is recorded. In a limited number of circumstances, the Company may also agree to indemnify customers against legal claims made against those customers by the end users of the Company's products. Historically, payments made by the Company, if any, under such agreements have not had a material effect on the Company's consolidated results of operations, cash flows or financial position.

Property, Plant and Equipment

Property, plant and equipment are carried at cost. Major renewals and betterments are capitalized. Maintenance and repairs are expensed on a current basis. When assets are sold or retired, their costs and accumulated depreciation are removed from the accounts, and the resulting gains or losses are reflected in the consolidated statements of operations.

American Institute of Certified Public Accountants (AICPA) Statement of Position (SOP) 98-1, Accounting for the Costs of Computer Software Developed or Obtained for Internal Use, provides guidance on capitalization of the costs incurred for computer software developed or obtained for internal use. The Company capitalizes substantially

all external costs and qualifying internal costs related to the purchase and implementation of software projects used for business operations and engineering design activities. Capitalized software costs primarily include purchased software and external consulting fees. Capitalized software projects are amortized over the estimated useful lives of the software, typically a three-to-five year period.

Depreciation and Amortization

Depreciation of property, plant and equipment is provided for using accelerated methods over the following estimated useful lives:

System Software	3 to 5 years
Machinery and equipment	3 to 10 years
Buildings and site improvements	20 to 45 years

Leasehold improvements are amortized using the straight-line method over the shorter of the expected life or the remaining term of the lease. Amortization of purchased intangible assets with finite useful lives is computed using the straight-line method over the estimated useful lives of the assets.

Cost of Sales

The types of costs included in cost of sales include material, labor, factory and tooling overhead, shipping, and freight costs. Major components of these expenses are material costs, such as steel, personnel, packaging and cartons and facility costs such as rent, depreciation and utilities related to the production and distribution of the Company's products. Inbound freight charges, purchasing and receiving costs, inspection costs, warehousing costs, internal transfer costs, and other costs of the Company's distribution network are also included in costs of sales.

Tool and Die Costs

Tool and die costs are included in product costs in the year incurred.

Shipping and Handling Costs

The Company's general shipping terms are F.O.B. shipping point. Shipping and handling costs are included in product costs in the year incurred.

Product Research and Development Costs

Product research and development costs, which are included in operating expenses and were charged against income as incurred, were \$6.0 million, \$5.7 million and \$4.9 million in 2007, 2006 and 2005, respectively. The types of costs included as Product Research and Development expenses are typically related to salaries and benefits and supplies. The Company amortizes acquired patents over their remaining lives and performs periodic reviews for impairment. The cost of internally developed patents is expensed as incurred.

Selling Costs

Selling costs include expenses associated with selling, merchandising and marketing the Company's products. Major components of these expenses are personnel, sales commissions, facility costs such as rent, depreciation and utilities, professional services, information technology related costs, sales promotion, advertising, literature and trade shows.

Advertising Costs

Advertising costs are included in selling expenses, are expensed when the advertising occurs, and were \$9.5 million, \$12.1 million and \$10.1 million in 2007, 2006 and 2005, respectively.

General and Administrative Costs

General and administrative costs include personnel, information technology related costs, facility costs such as rent, depreciation and utilities, professional services, and amortization of intangibles.

Income Taxes

Income taxes are calculated using an asset and liability approach. The provision for income taxes includes federal, state and foreign taxes currently payable and deferred taxes, due to temporary differences between the financial statement and tax bases of assets and liabilities. In addition, future tax benefits are recognized to the extent that realization of such benefits is more likely than not.

Foreign Currency Translation

The local currency is the functional currency of the Company's operations in Europe and Canada. Assets and liabilities denominated in foreign currencies are translated using the exchange rate on the balance sheet date. Revenues and expenses are translated using average exchange rates prevailing during the year. The translation adjustment resulting from this process is shown separately as a component of stockholders' equity. Foreign currency transaction gains or losses are included in general and administrative expenses and have not been significant in any of the years presented.

Common Stock

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

Subject to the rights of holders of any preferred stock that may be issued in the future, holders of common stock are entitled to receive such dividends, if any, as may be declared from time to time by the Board of Directors (the Board) out of legally available funds, and in the event of liquidation, dissolution or winding-up of the Company, to share ratably in all assets available for distribution. The holders of common stock have no preemptive or conversion rights. Subject to the rights of any preferred stock that may be issued in the future, the holders of common stock are entitled to one vote per share on any matter submitted to a vote of the stockholders, except that, subject to compliance with pre-meeting notice and other conditions pursuant to the Company's Bylaws, stockholders may cumulate their votes in an election of directors, and each stockholder may give one candidate a number of votes equal to the number of directors to be elected multiplied by the number of shares held by such stockholder or may distribute such stockholder's votes on the same principle among as many candidates as such stockholder thinks fit. There are no redemption or sinking fund provisions applicable to the common stock.

In 1999, the Company declared a dividend distribution of one Right to purchase Series A Participating preferred stock per share of common stock. The Rights will be exercisable, unless redeemed earlier by the Company, if a person or group acquires, or obtains the right to acquire, 15% or more of the outstanding shares of common stock or commences a tender or exchange offer that would result in it acquiring 15% or more of the outstanding shares of common stock, either event occurring without the prior consent of the Company. The amount of Series A Participating preferred stock that the holder of a Right is entitled to receive and the purchase price payable on exercise of a Right are both subject to adjustment. Any person or group that acquires 15% or more of the outstanding shares of common stock without the prior consent of the Company would not be entitled to this purchase. Any stockholder who holds 25% or more of the Company's common stock when the Rights were originally distributed would not be treated as having acquired 15% or more of the outstanding shares unless such stockholder's ownership is increased to more than 40% of the outstanding shares.

The Rights will expire on July 29, 2009, or they may be redeemed by the Company at one cent per Right prior to that date. The Rights do not have voting or dividend rights and, until they become exercisable, have no dilutive effect on the earnings of the Company. One million shares of the Company's preferred stock have been designated Series A Participating preferred stock and reserved for issuance on exercise of the Rights. No event during 2007 made the Rights exercisable.

Preferred Stock

The Board has the authority to issue the authorized and unissued preferred stock in one or more series with such designations, rights and preferences as may be determined from time to time by the Board. Accordingly, the Board is empowered, without stockholder approval, to issue preferred stock with dividend, redemption, liquidation, conversion, voting or other rights that could adversely affect the voting power or other rights of the holders of the Company's common stock.

Net Income per Common Share

Basic net income per common share is computed based on the weighted average number of common shares outstanding. Potentially dilutive shares, using the treasury stock method, are included in the diluted per-share calculations for all periods when the effect of their inclusion is dilutive.

The following is a reconciliation of basic earnings per share (EPS) to diluted EPS:

(in thousands, except per-share amounts)	Years ended December 31,								
	Net Income	2007 Weighted Average Shares	Per Share	Net Income	2006 Weighted Average Shares	Per Share	Net Income	2005 Weighted Average Shares	Per Share
Basic EPS									
Income available to common stockholders	\$ 68,742	48,472	\$ 1.42	\$ 102,496	48,300	\$ 2.12	\$ 98,394	48,081	\$ 2.05
Effect of Dilutive Securities									
Stock options		456	(0.02)		591	(0.02)		525	(0.03)
Diluted EPS									
Income available to common stockholders	\$ 68,742	48,928	\$ 1.40	\$ 102,496	48,891	\$ 2.10	\$ 98,394	48,606	\$ 2.02

Anti-dilutive shares attributable to outstanding stock options were excluded from the calculation of diluted net income per share. For the years ended December 31, 2007, 2006 and 2005, 1.0 million, 1.0 million and 0.8 million shares, respectively, subject to stock options were anti-dilutive.

The amount of the average stock price for the period in excess of the grant date fair value of stock options, known as the windfall tax benefit, is added to the proceeds of stock option exercises under the treasury stock method for computing the amount of dilutive securities used to determine the outstanding shares for the calculation of diluted earnings per share.

Comprehensive Income

Comprehensive income, which is included in the consolidated statement of stockholders' equity, is defined as net income plus other comprehensive income. Other comprehensive income includes changes in foreign currency translation adjustments recorded directly into stockholders' equity and changes in net unrealized gains on available-for-sale investments. The components of accumulated other comprehensive income as of December 31, 2007, were \$25.3 million, net of tax of \$1.6 million, and as of December 31, 2006, were \$11.5 million, net of tax of \$1.5 million, all of which comprised foreign currency translation adjustments.

Concentration of Credit Risk

Financial instruments that potentially subject the Company to concentrations of credit risk consist of cash in banks, short-term investments in United States Treasury securities, money market instruments and trade accounts receivable. The Company maintains its cash in demand deposit and money market accounts held primarily at seven banks.

Accounting for Stock-Based Compensation

The Company maintains two stock option plans under which it may grant incentive stock options and non-qualified stock options, although the Company has granted only non-qualified stock options under these plans. The Simpson Manufacturing Co., Inc. 1994 Stock Option Plan (the 1994 Plan) is principally for the Company's employees, and the Simpson Manufacturing Co., Inc. 1995 Independent Director Stock Option Plan (the 1995 Plan) is for its independent directors. The Company generally grants options under each of the 1994 Plan and the 1995 Plan once each year. The exercise price per share of each option granted in February 2007 and January 2006 under the 1994 Plan equaled or exceeded the closing market price per share of the Company's common stock as reported by the New York Stock Exchange for the date when the Company first publicly announced its financial results for 2006 and 2005, respectively. In prior years, stock options were granted under the 1994 Plan with the exercise price equal to or in excess of the closing market price per share of the Company's common stock as reported by the New York Stock Exchange on the last trading day of the preceding year. The exercise price per share under each option granted under the 1995 Plan is at the fair market value on the date specified in the 1995 Plan. Options vest and expire according to terms established at the grant date.

Under the 1994 Plan, no more than 16 million shares of the Company's common stock may be sold (including shares already sold) pursuant to all options granted under the 1994 Plan. Under the 1995 Plan, no more than 320 thousand shares of common stock may be sold (including shares already sold) pursuant to all options granted under the 1995 Plan. Options granted under the 1994 Plan typically vest evenly over the requisite service period of four years and have

Edgar Filing: SIMPSON MANUFACTURING CO INC /CA/ - Form 10-K

a term of seven years. The vesting of options granted under the 1994 Plan will be accelerated if the grantee ceases to be employed after reaching age sixty or if there is a change in control of the Company. Options granted under the 1995 Plan are fully vested on the date of grant.

As of January 1, 2006, the Company adopted Statement of Financial Accounting Standards (SFAS) No. 123R, Share Based Payment (Revised 2004), using the modified prospective application approach as its transition method. Prior periods are not restated under this method. The cash flow presentation changed whereby cash inflow from excess tax benefits from the exercise of stock options is presented in the consolidated statements of cash flows as a financing activity, where applicable, rather than as an operating activity, as previously presented. Prior to the adoption of SFAS 123R and since January 1, 2003, when the Company adopted SFAS No. 148, Accounting for Stock-Based Compensation Transition and Disclosure, and SFAS No. 123, Accounting for Stock Based Compensation, the Company accounted for stock options on a fair value basis and used the prospective method of applying SFAS No. 123 for its transition. As of January 1, 2006, the Company had no unvested options that were accounted for using the intrinsic value method prescribed in Accounting Principles Board (APB) Opinion No. 25, Accounting for Stock Issued to Employees, and related interpretations.

The following table represents the Company's stock option activity for the years ended December 31, 2007, 2006 and 2005:

(in thousands)	Years Ended December 31,		
	2007	2006	2005
Stock option expense recognized in operating expenses	\$ 5,906	\$ 7,353	\$ 5,873
Tax benefit of stock option expense in provision for income taxes	2,330	2,779	2,161
Stock option expense, net of tax	\$ 3,576	\$ 4,574	\$ 3,712
Fair value of shares vested	\$ 5,893	\$ 7,618	\$ 5,873
Proceeds to the Company from the exercise of stock options	\$ 4,832	\$ 8,947	\$ 4,095
Tax benefit from exercise of stock options	\$ 554	\$ 3,349	\$ 3,843
	At December 31,		
	2007	2006	2005
Stock option cost capitalized in inventory	\$ 252	\$ 265	\$

The amounts included in cost of sales, selling, or general and administrative expenses depend on the job functions performed by the employees to whom the stock options were granted. Shares of common stock issued on exercise of stock options under the plans are registered under the Securities Act of 1933.

Had compensation cost for the Company's stock options for all grants prior to January 1, 2003, been recognized based on the estimated fair value on the grant date under the fair value methodology prescribed by SFAS No. 123, as amended by SFAS No. 148, the Company's net income and net income per share would have been as follows:

(in thousands, except per-share amounts)	Year Ended December 31, 2005
Net income, as reported	\$ 98,394
Add: Stock-based employee compensation expense included in reported net income, net of related tax effects	3,712
Deduct: Total stock-based employee compensation expense determined under the fair value method for all awards granted prior to January 1, 2003, net of related tax effects	3,740
Net income, pro forma	98,366
Net income per share	
Basic, as reported	\$ 2.05
Basic, pro forma	2.05
Diluted, as reported	2.02
Diluted, pro forma	2.02

The assumptions used to calculate the fair value of options granted are evaluated and revised, as necessary, to reflect market conditions and the Company's experience.

Under the 1994 Plan, the Company allows for full vesting on ceasing to be employed if the employee becomes retirement-eligible by reaching age sixty. Prior to the adoption of SFAS 123R, stock-based employee compensation expense was recorded over the nominal vesting period and if a retirement-eligible employee retired before the end of the vesting period, the Company recorded unrecognized compensation cost at the date of retirement (the nominal vesting period approach). The nominal vesting period is four years of service subsequent to the grant date. The non-substantive vesting period approach specifies that awards, in substance, become vested when the employee's retention of the award is no longer contingent on providing service. Under this approach, the unrecorded compensation cost is expensed when that condition is met even if the employee continues providing service to the Company. This would be the case for existing grants when an employee becomes retirement-eligible, as well as when a retirement-eligible employee is granted an award. With the adoption of SFAS No. 123R on January 1, 2006, the Company adopted the non-substantive vesting period approach for new grants that have retirement eligibility provisions. The accounting treatment of options granted to retirement-eligible employees prior to the Company's adoption of SFAS 123R has not changed and financial statements for periods prior to adoption have not been restated. Therefore, the expense recorded in 2007 and 2006 comprises stock options that vest under both the non-substantive vesting period approach and the nominal vesting period approach. In contrast, the 2005 expense was calculated using the nominal vesting period approach. The effect on net income of applying the nominal vesting period approach versus the non-substantive vesting period approach was not material to the Company's results of operations for the years ended December 31, 2007, 2006 and 2005.

Goodwill and Intangible Assets

The Company reviews for impairment its indefinite lived intangible assets annually, in the fourth quarter of each year, and whenever events or changes in circumstances indicate the carrying value of an asset may not be recoverable in accordance with SFAS Statement No. 142, Goodwill and Other Intangible Assets. SFAS No. 142 requires that management perform a two-step impairment test on goodwill. In the first step, management compares the fair value of each reporting unit to its carrying value. The fair value calculation uses discounted cash flow model and market approaches. If the carrying value of the net assets assigned to the reporting unit exceeds the fair value of the reporting unit, a second step of the impairment test must be performed to determine the implied fair value of the reporting unit's goodwill. If the carrying value of a reporting unit's goodwill exceeds its implied fair value, an impairment charge equal to the difference between the implied fair value of the goodwill and the carrying cost would be reported.

Determining the fair value of a reporting unit or an indefinite-lived purchased intangible asset is a judgment involving significant estimates and assumptions. These estimates and assumptions include revenue growth rates and operating margins used to calculate projected future cash flows, risk-adjusted discount rates, and future economic

and market conditions. The Company bases its fair value estimates on assumptions that management believes to be reasonable but that are unpredictable and inherently uncertain. Actual future results may differ from those estimates. The \$10.7 million impairment charge taken in 2007 was primarily attributed to the decision by the Company, in October 2007, to move production of certain products from the Canadian reporting unit to China in 2008 or early 2009. The method to determine the fair value of the Canadian reporting unit was a combination of a discounted cash flow model and market approaches. The market approaches were based on multiples realized by similar public companies and on representative merger and acquisition transactions of a similar nature and industry. The Company's annual goodwill impairment analysis did not result in any additional impairment charges in 2007 or any impairment charges in 2006 and 2005.

The changes in the carrying amount of goodwill as of December 31, 2006 and 2007, are as follows:

(in thousands)	Goodwill	
Balance at January 1, 2006	\$	42,681
Foreign exchange		1,656
Balance at December 31, 2006		44,337
Acquisitions		20,143
Impairment of goodwill		(10,666)
Foreign exchange		3,604
Balance at December 31, 2007	\$	57,418

All of the Company's goodwill and the goodwill impairment is associated with the connector products operating segment.

The total gross carrying amount and accumulated amortization of intangible assets subject to amortization at December 31, 2007, were \$32.0 million and \$8.8 million, respectively. The aggregate amount of amortization expense of intangible assets for the year ended December 31, 2007, was \$3.3 million.

The changes in the carrying amounts of patents, unpatented technologies and non-compete agreements and other intangible assets subject to amortization as of December 31, 2006 and 2007, are as follows:

(in thousands)	Patents		Accumulated Amortization		Net Patents	
Balance at January 1, 2006	\$	8,656	\$	(2,818)	\$	5,838
