

APPLIED SIGNAL TECHNOLOGY INC
Form 10-K
January 12, 2010

United States
Securities and Exchange Commission
Washington, D.C. 20549

Form 10-K

(Mark One)

Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934

For the Fiscal Year Ended October 31, 2009

or

Transition Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934 for the Transition Period from _____ to _____.

Commission file number 0-21236

Applied Signal Technology, Inc.

(Exact name of registrant as specified in its charter)

California
(State or other jurisdiction of
incorporation or organization)

77-0015491
(I.R.S. Employer
Identification No.)

460 West California Ave., Sunnyvale, CA 94086
(Address of principal executive offices)

(408) 749-1888
(Registrant's telephone number, including area code)

Securities registered pursuant to Section 12(b) of the Act: Common Stock, without par value; Nasdaq Global Select Market.

Securities registered pursuant to Section 12(g) of the Act: none.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter periods that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See definition of "large accelerated filer," "accelerated filer," and "smaller reporting company" in Rule 12b-2 of the

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Exchange Act (check one):

ii

Large accelerated filer

Accelerated filer

Non-accelerated filer

Smaller reporting company

Indicate by check mark whether the registrant is a shell company (as defined by Rule 12b-2 of the Act).

Yes ii
No No

Aggregate market value of the voting common stock held by non-affiliates of the registrant:

Common stock, without par value – \$246,846,001 as of May 1, 2009, based on the closing price on such date for the registrant’s common stock reported by the NASDAQ Global Market System. For purposes of this disclosure, shares of common stock held by persons who held more than 5% of the outstanding shares of common stock and shares held by officers and directors of the registrant have been excluded in that such persons may be deemed affiliates. The determination of affiliate status is not necessarily a conclusive determination for other purposes.

Number of shares of registrant’s common stock outstanding:

Common stock, without par value – 13,211,462 shares as of October 31, 2009.

Documents Incorporated by Reference

The registrant has incorporated by reference into Part II, Item 5, and Part III of this Form 10-K portions of its proxy statement for the registrant’s Annual Meeting of Shareholders to be held on March 17, 2010.

Item 1: Business

This annual report on Form 10-K contains forward-looking statements made pursuant to the provisions of Section 21E of the Securities Exchange Act of 1934. These forward-looking statements are based on management's current expectations and beliefs, including estimates and projections about our industry. Forward-looking statements may be identified by the use of terms such as "anticipates," "expects," "intends," "plans," "seeks," "estimates," "believes," and similar expressions, although some forward-looking statements are expressed differently. Statements concerning financial position, business strategy, and plans or objectives for future operations are forward-looking statements. These statements are not guarantees of future performance, are subject to certain risks, uncertainties, and assumptions that are difficult to predict, and may cause actual results to differ materially from management's current expectations. Such risks and uncertainties include those set forth under "Item 1A: Risk Factors" and "Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations." The forward-looking statements in this report speak only as of the time they are made and do not necessarily reflect management's outlook at any other point in time. We undertake no obligation to update publicly any forward-looking statements, whether as a result of new information, future events, or for any other reason. However, readers should carefully review the risk factors set forth in other reports or documents we file from time to time with the Securities and Exchange Commission (SEC) after the date of the annual report. These SEC filings, as well as our latest annual report, can be obtained through our website at www.appsig.com. In addition, hard copies can be obtained free of charge through our investor relations department.

Description of the Business

Applied Signal Technology, Inc. (AST) is a leading provider of advanced intelligence, surveillance, and reconnaissance (ISR) solutions to enhance global security. We provide domain knowledge in the areas of communications, signals intelligence (SIGINT) and sensor signature processing. Our SIGINT competencies include the collection and exploitation of communications intelligence (COMINT), electronic intelligence (ELINT) and cyber intelligence. Our sensor signature expertise includes processing information from electro-optic, sonar, radar, magnetic, and chemical sensors to detect changes in the environment and provide real-time alerts of potential threats. We specialize in the collection, processing, and understanding of signals for ISR missions with low size, weight, and power configurations to enable increased deployment on unmanned platforms. We develop and manufacture sophisticated sensors and digital signal processing equipment that use advanced software. Our primary customers are the United States Government and defense industry prime contractors for the United States Government. Our sophisticated products, systems, and services help resolve our customers' most critical national security and signal collection issues. We provide advanced ISR solutions that allow our nation to prepare for, prevent, evaluate, and respond to foreign and domestic threats. Our specific capabilities include:

Broadband Network Communications. Our broadband communication technology provides secure, high speed communication networks to Government customers. Our solutions enable private networks to operate at the highest communication rates while simultaneously monitoring and scanning all channels to prevent disruptions to network quality of service. We also provide bandwidth compression technology to maximize performance for satellite communications.

Cyber Intelligence. Our specialized systems, software and analytics address sophisticated cyber space threats by creating a unique blend of proprietary intelligence techniques and advanced computer network solutions. We are developing a suite of high capacity network monitoring products to provide deep packet inspection to protect against the threat of cyber attacks. These complex systems identify and localize illicit activity on communication networks and provide the analysis and visualization tools necessary to produce meaningful results in time to make a

difference.

Tactical COMINT. Our tactical COMINT solutions include deployment of ground-based and airborne payloads for the detection, identification, location, and tracking of mobile communications and weapons systems. The AST product portfolio includes man-portable, airborne, remote/unattended, and system-level solutions for both strategic and tactical missions. Our systems are wideband digital systems that utilize signal processing technology to deliver superior performance against conventional and modern signals, even in the most challenging signal environments.

Electronic Warfare (EW). Our EW solutions detect, identify, and counter adversary weapons and sensor systems by collecting signals from electronic emitters. We have developed a suite of ELINT and electronic support measures (ESM) to derive intelligence from signals associated with weapons systems. This equipment is able to scan the radar bands associated with weapons systems and determine the type of system and its precise location for battlefield characterization and force protection. To date, we have derived a limited amount of revenue from the sale of our ELINT products.

Sensor Surveillance. Our specialized sensors and signature processing observes changes in the environment that can provide an indication of activities of concern to global security. Sensor signatures addressed by AST include the use of sound, such as in sonar or radar, to detect mines or submarines; detection of chemicals to expose explosive devices; and detection of magnetic materials that might indicate the presence of buried mines or underground weapons facilities. Our sensor processing equipment provides automatic detection and classification of threatening objects in both marine and terrestrial environments.

Mission Planning and Support. We provide software-based management systems that provide the tasking and planning of deployed sensors and collection systems to conduct operations, training, and sustainment. We also provide mission management of deployed systems.

Professional Services. We perform high-end engineering services for Government product development and operationally deployed systems. Examples of these services include: software engineering development of service oriented architectures; system-level performance evaluation and modeling; system integration; field support and customer training in the use of our standard products.

For fiscal year 2009, 65% of our revenues were from contracts for which we were the prime contractor, 59% of our revenues were from cost-reimbursable contracts, and 89% of our revenues were from sole-source contracts. Substantially all of our revenues are from contracts with the United States Government or prime contractors to the United States Government.

We are incorporated in California. Our headquarters are located at 460 West California Ave., Sunnyvale, CA, 94086, and our telephone number at that address is (408) 749-1888. Our website address is www.appsig.com. The information posted on our website is not incorporated into this annual report. However, investors can obtain a copy of this annual report on Form 10-K, our quarterly reports on Form 10-Q, current reports on Form 8-K, and amendments to such reports filed or furnished with the SEC, as well as a copy of our Code of Ethics, on our website free of charge. These filings are also available on the SEC's website at www.sec.gov. The public may read and copy any materials we file with the SEC at the SEC Public Reference Room at 100 F Street, NE, Washington, D.C. The public may obtain information from the Public Reference Room by calling the SEC at 1 800-SEC-0330.

Business Strategies

Our objective is to grow our business as a leading provider of state-of-the-art ISR products, systems, and services. In order to accomplish this objective we focus on three major strategies: solidifying our leadership in signal processing; improving our competitiveness; and expanding the business in our core ISR market. To do so, we anticipate the needs of the global security marketplace and invest in research and development to introduce new capabilities and products. We have recently augmented this strategy by offering high-end engineering services in support of major United States Government technology development initiatives.

Solidify our leadership position in signal processing with established customers by:

- **Expanding our core competency in signal processing.** Since inception, we have focused our attention on developing signal processing equipment and services. We believe that there have been, and will continue to be, opportunities to develop specialized signal processing equipment and services to satisfy emerging technological requirements. We work closely with industry technology leaders to develop custom and off-the-shelf solutions by using in-house software to create new products and systems to address emerging global security needs.
- **Anticipating marketplace needs.** We devote significant resources in order to anticipate future global security needs. We monitor technological and commercial advances in communications and sensors as well as trends in terrorist activities to identify potential solutions for our customers. We obtain information about marketplace needs through frequent contact with technical and contracting officials of pertinent Government agencies within the intelligence community.
- **Investing in research and development.** We invest in independent research and development (R&D) that we believe will enable us to develop equipment and services that will satisfy the future global security needs of our customers before our competitors. An

important aspect of our R&D efforts is the understanding of information sources that could enhance global security in order to anticipate the future needs of our customers. Not only does this allow us to direct R&D engineering efforts to produce solutions promptly once a customer expresses a requirement, but it often allows us to educate the customer about potential requirements and simultaneously present a conceptual solution to those requirements.

Improve our competitiveness by:

- ***Reducing internal costs.*** When technical difficulty and specialized solutions determine the customer's need, our technological capabilities often provide the basis for sole-source awards. We believe that we may have additional customer opportunities where we need to be more focused on product and system cost. We implemented a broad initiative to reduce our indirect costs through organizational consolidation, administrative cost reduction, improving the utilization of our facilities, and reevaluating our cumulative benefits costs.
- ***Implementing a new, multi-rate strategy.*** Historically, we have had success in capturing sole-source product development efforts. We intend to seek additional business opportunities as a specialized system integrator and by providing engineering services in order to enhance our competitiveness in these markets. In fiscal year 2009, we commenced implementation of a new multiple rate structure, which allows us to compete in these areas.
- ***Attract and develop a highly skilled workforce.*** Our success depends on the continued contributions of our engineers, scientists, and managers. We intend to continue to hire and develop the highly skilled professionals needed for our work. We seek to recruit exceptional recent college graduates and former key personnel from the defense and intelligence communities. We believe we can continue to attract, develop, and retain employees by offering competitive compensation and benefits, challenging assignments, and opportunities for career growth.

Expand the business in our core ISR market by:

- ***Developing flexible products.*** We believe a combination of our highly skilled staff and leading-edge technology offers opportunities into new programs and markets. We develop products that can be used as originally designed or tailored to satisfy the needs of new customers. We use prior product development efforts to offer cost-effective solutions with a shortened time-to-market. We also see opportunity in implementing our next-generation signal processing in software product solutions, enabling customers to upgrade their signal collection capabilities without extensive hardware recapitalization costs. For example, since the beginning of fiscal year 2009, we have strengthened our product development pipeline and debuted three new products: a broadband network analysis product for cyber surveillance, a tactical wireless reconnaissance product capable of addressing 3G communication networks, and a towed synthetic aperture sonar system for port and harbor surveillance.
- ***Migrating up the value chain from established product positions.*** In many of our programs, we provide knowledge of the signal source and threat environment, which can be leveraged to expand our participation and provide end-to-end responsibility for a payload subsystem or fully integrated sensor system. We believe we can leverage our unique domain knowledge to expand our products and services, and serve as a system integrator on select opportunities.
- ***Increasing our business with existing customers and broadening our customer base.*** We intend to increase our services to meet the needs of the military and to increase our participation in emerging programs as the Department of Defense recapitalizes its inventory of ISR equipment. For example, we are developing a suite of miniaturized, low power products to address market expansion opportunities on unmanned vehicles. We believe the adaptability and flexibility of our SIGINT and sensor surveillance products make them attractive in joint or coalition warfare environments.
- ***Expanding our role in providing engineering and support services.*** We plan to continue to expand our presence near customer facilities to provide high-quality engineering services in support of major community developments to meet the Government outsourcing of key technical support services. We also plan to offer operational and sustainment support in our products and systems as they are deployed.
- ***Investing in our long-term value proposition.*** We plan to continue to seek opportunities to acquire companies of complementary technology, products, or businesses that accelerate our growth in our core ISR markets. We also expect to expand our suite of patents to protect the long-term opportunity associated with our current and future licensing efforts.

Operating Divisions and Products

Within our one operating segment, we have organized our operations into four market-facing divisions to optimize management span of control and ensure a strong customer focus. Our four market-facing divisions are Broadband Communication Systems, Intelligence and Electronic Warfare Systems, Network Intelligence and Sensor Systems. In addition to these divisions, we operate a single Operations division for manufacturing our products, purchasing materials, and providing sustaining engineering support. The prices of each of these products and systems within our market-facing divisions may vary based on the level of customization required by our customers. The specific focus of our four market-facing organizations is described below.

Broadband Communication Systems

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

The Broadband Communication Systems Division provides proprietary broadband communication technology and network solutions for high speed communications, primarily to Government customers. Our network solutions include the full spectrum of communication support equipment and software for bandwidth compression, encrypting and decrypting traffic, multiplexing and demultiplexing traffic from multiple communication streams, conducting deep packet inspection for network traffic monitoring and management, and performing real-time network quality assessment. Many of these products and systems use an advanced selection architecture (ASA) that incorporates custom and commercially available hardware and software in configurations capable of being readily adapted or upgraded to accommodate future signal formats at a reduced cost. This design methodology allows us to adapt our products and systems to the challenging requirements presented by quick-reaction missions. The benefits of our design methodology include shorter implementation schedules, flexibility, improved interoperability with other systems, and reduced operational costs to our customers.

Intelligence and Electronic Warfare Systems

Accurate and comprehensive information regarding foreign affairs and developments affecting international security has become increasingly important to the United States Government. We believe the political instability in certain regions around the world and ongoing counterterrorism campaigns have heightened the United States Government's need to be able to monitor activities overseas. In order to obtain information about activities from foreign threats, the United States Government gathers and analyzes communication signals emanations. The Intelligence and Electronic Warfare Systems Division provides research and development for the collection and analysis of tactical wireless communications and electronic intelligence.

The ever-increasing commercial development of telecommunications equipment has led to a significant increase in the overall quantity of information communicated and an increase in the density of signals transmitted throughout the RF spectrum. This increase can be seen in the proliferation of radio, cellular, and digital signal telecommunications equipment and in the global information network (such as the Internet), resulting in a significant increase in the amount of information being communicated. Our tactical wireless COMINT systems automatically scan and process thousands of modern telecommunication signals to isolate and collect specific communications from targets of interest. Our products and systems are tailored for small tactical and hand-launched platforms and vehicles. Our miniature, low power systems can be used on a broad range of strategic and military platforms including aircraft, unmanned aerial vehicles (UAV), land-mobile vehicles, fixed site installations, and relocatable land sites.

Our key COMINT products include wideband processors and collection products. These processors "groom" telecommunication signals for further processing by VGC processors by adjusting for signal distortions that commonly occur during transmission. The two primary types of distortions that these processors correct are multipath interference (caused by the reception of a signal and its reflections) and co-channel interference (caused by the reception of multiple interfering signals). Our collection products include low-cost, small receivers that collect information in very complex signaling formats and optimize multiple antenna inputs to overcome co-channel interference and certain forms of multi-path interference.

Our ELINT and ESM products include a flexible product line developed to characterize enemy weapon systems and provide battlefield mapping and force protection by using unmanned aerial vehicles and smaller manned aircraft as standoff sensing platforms. Our equipment exploits the threat emitters in a small form factor to facilitate collection operations by using stealthy platforms. We completed successful flight testing and demonstration of our initial product in 2009.

Network Intelligence

In fiscal year 2009, we formed a new market-facing division to address the emerging opportunities in cyber security, leveraging our legacy in communication signal processing. Our Network Intelligence division brings an understanding of the global telecommunications network to the cyber domain. We leverage our knowledge of the network to provide systems, analytics, and services that enable our customers' defensive and offensive cyber operations. We have solutions that provide dynamic, real-time monitoring, characterization and monitoring of very high bandwidth cyber networks and cyber data streams. We believe that our solutions handle the traffic and demands of today's largest broadband networks with less size and power required by commercially available equipment. Our services are typically offered on a time and materials basis. The prices of our services may vary based upon the skill level of technical talent required by our customers.

In order to address emerging near-term opportunities, we acquired Pyxis Engineering, LLC (Pyxis). Pyxis complements and reinforces our existing software and mission engineering services capabilities by providing post-collection intelligence analysis tools such as human language technology, cloud computing, complex event processing and advanced data operations. This business utilizes highly skilled software engineers to provide subcontract services to the U.S. intelligence community. These services protect sensitive networks and critical infrastructure as well as provide a range of capabilities applicable to both defensive and offensive network operations. Together, we provide technical experience from the signal source through to the analyst's report.

Sensor Systems

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

In the current counterterrorism campaign, the United States Government is expanding the collection of signature information to aid in the detection and location of potential terrorist activities. The Sensor Systems Division provides advanced sensor signal processing solutions for space-based, airborne, terrestrial, and undersea sensor technologies. Our sensor processing products consist of advanced digital signal processing hardware and software to automatically process the results of raw sensor data to detect abnormalities of interest. We provide remote sensing by processing and analyzing information from sound to light spectrum sources including radar, magnetic, infrared, electro-optical, hyperspectral, and visible light.

Our key sensor solutions include synthetic aperture sonar, radar, magnetic, and explosive detection products. These systems are designed to detect abnormalities in the marine environment such as the presence of a submarine, mines tethered to the ocean floor, and terrorist activities such as attempts to destruct a national infrastructure (such as pipelines or communication lines) on the ocean floor. Our solutions consist of active sensors, such as synthetic aperture sonar and radar detection of periscopes, and passive sensing, such as magnetic detection of submarines. The prices of these products and systems may vary based on the level of complexity required by our customers. We are also developing integrated sensor systems to detect explosive materials deployed in vehicles, luggage, and cargo containers. In fiscal year 2009, we completed the development of a third-generation system by using associated neutron particle imaging for the United States Government.

Segments

We have reviewed our business operations and determined that we operate in a single homogeneous business segment. We sell similar products and services with similar economic characteristics to similar classes of customers, primarily to the United States Government, its agencies, or prime contractors for the United States Government. Our technologies and operations of our divisions are highly integrated. Management reviews revenues and costs on an individual contract basis as a single, integrated business segment.

Customers

Since our inception, purchases by the United States Government have accounted for almost all of our revenues. These purchases occur in two ways: through contracts directly with the United States Government and subcontracts to prime contractors. Direct contracts with the United States Government accounted for approximately 65%, 65%, and 69% of revenues in fiscal years 2009, 2008, and 2007, respectively. The subcontracts under which we supply products or services to prime contractors that have contracts with the United States Government accounted for approximately 30%, 31%, and 29% of revenues in fiscal years 2009, 2008, and 2007, respectively.

Our United States Government customers consist of military and intelligence agencies that have signal reconnaissance needs. Within our United States Government customers, we have contracts with approximately 40 different organizations, each with separate budgets and contracting authority.

The following table identifies the source of our revenues for fiscal years 2009, 2008, and 2007 by market.

	FY09	FY08	FY07
Intelligence	83%	80%	78%
Defense	12%	16%	20%
Commercial	5%	4%	2%
Foreign	— -----	— -----	— -----
	100% =====	100% =====	100% =====

a dash (—) designates less than 1% revenue concentration

Foreign revenues consist of contracts directly with foreign governments or foreign companies.

Within the customer types, contracts with two intelligence community customers and one defense customer represented a significant portion of revenues.

The table below identifies the revenue concentration (as a percentage of total revenues) from all contracts with each significant customer.

	FY09	FY08	FY07
--	------	------	------

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Intelligence community customer 1	33%	25%	26%
Intelligence community customer 2	43%	50%	47%
Largest defense customer	9%	12%	15%
	85%	87%	88%

Contracts

Most of our business is conducted under contracts that include United States Government security requirements. Our contracts with United States Government agencies are of two types, as described below.

Sole-source contracts are awarded by the United States Government when a single contractor is deemed to have an expertise or technology that is superior to that of competing contractors. Potential suppliers compete informally for sole-source contracts through R&D investment and marketing efforts. This competition requires a contractor to identify the United States Government's requirements early and invest in developing potential solutions so that the contractor can demonstrate a distinguishing expertise or technology promptly after the United States Government has identified a requirement. Sole-source contracts are awarded without a formal competition.

Competitive-bid contracts are awarded based on formal proposal evaluation criteria established by the procuring agency. Interested contractors prepare a bid and proposal in response to the agency's request. A bid and proposal is usually prepared in a short time period (for example, 45 days) in response to a deadline, and requires the extensive involvement of numerous technical and administrative personnel. Competitive-bid contracts are awarded after a formal bid and proposal competition among suppliers.

The following table identifies the allocation of revenues from all sources from which we generated revenue for fiscal years 2009, 2008, and 2007.

	FY09	FY08	FY07
Sole-source contracts	89%	76%	76%
Competitive-bid contracts	11%	24%	24%
	100%	100%	100%

Sole-source and competitive-bid contracts can be fixed-price contracts, where we agree to deliver equipment for a fixed price and we assume the risk of cost overruns; cost-reimbursement contracts, where we are reimbursed for our direct and indirect costs and paid a negotiated profit; or time-and-materials contracts, where we recognize revenue by applying a negotiated billing rate to the level of effort. Historically, we achieve greater profit margins from our fixed-price contracts than from our cost-reimbursement and time-and-materials contracts. In recent years, our significant contracts have been cost-reimbursement contracts. In addition, we have one agreement for which we accrue royalties on sales of our licensed product by a third party. Since there are essentially no costs associated with this agreement, operating income will increase by the same amount of revenue that we recognize.

The following table represents our revenue concentration during the respective periods by contract type.

	FY09	FY08	FY07
Cost-reimbursement contracts	59%	69%	71%
Time-and-materials contracts	22%	18%	14%
Fixed-price contracts	16%	10%	14%
Royalty contracts	3%	3%	1%
	100%	100%	100%

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Most of our fixed-price contracts are for the manufacture of multiple units of our established products, rather than the development of new products. We believe that the risk of cost overruns is much less in the case of fixed-price manufacturing contracts, where the product has already been developed and at least a prototype made, than in the case of fixed-price development contracts.

The following table represents the revenue concentration from significant contracts during the respective periods. Due to security requirements of the United States Government, we are unable to disclose the actual contract names. Therefore, for the ease of the reader, we have renamed these contracts for reporting purposes in the table below.

	FY09	FY08	FY07
Tiffany	21%	13%	15%
ASA	18%	15%	9%
High Beam	7%	15%	—
Stone Face II	6%	12%	12%
Specter	—	5%	14%
	-----	-----	-----
	52%	60%	50%
	=====	=====	=====

a dash (—) designates less than 5% revenue concentration

The following contracts were indefinite-delivery-indefinite-quantity (IDIQ) contracts: ASA, Tiffany, and Stone Face II. Under the terms of this type of contract, the United States Government may issue individual delivery orders (DOs) for goods or services that they require. Each DO is treated as a separate contract, which may be awarded on a cost-reimbursable, fixed-price, or time-and-materials basis. We aggregate the DOs under each IDIQ contract for purposes of distinguishing significant revenue concentrations.

ASA is a time-and-materials contract. All of the other contracts referenced above were cost-reimbursement contracts.

We are subject to price redetermination on certain fixed-price United States Government contracts if it is determined that we did not price our products and services consistent with the requirements of the Federal Acquisition Regulations. During fiscal years 2009, 2008, and 2007, the United States Government made no material claims against us for noncompliance with these regulations.

Almost all of our contracts contain termination clauses that permit contract termination by the customer for cause upon our default or without cause for the convenience of the other contracting party. In either case, terminations could adversely affect our operating results. Under contracts terminable at the convenience of the United States Government, a contractor is generally entitled to receive payments for its allowable costs and, in general, the proportionate share of fees or earnings for the work done. Contracts that are terminable for default generally provide that the United States Government only pay for the work it has accepted and may require the contractor to pay for the incremental cost of procurement and may hold the contractor liable for damages incurred by the customer. For example, a portion of our Stone Face II contract was terminated for convenience. For further details, see “Item 1: Business, Backlog” below.

Backlog

Our backlog, which consists of anticipated revenues from the uncompleted portions of existing contracts and excludes unexercised contract options, was \$139,108,000, \$124,784,000, and \$126,708,000, at October 31, 2009, 2008, and 2007, respectively. Anticipated revenues included in backlog may be realized over a multi-year period and include expected revenues from contracts that are fully funded as well as from contracts that are only partially funded. We include expected revenues from a contract in backlog when the contract is signed by us and by our customer. We believe the backlog figures are firm, subject only to the cancellation and modification provisions contained in our contracts. (See “Item 7: Management’s Discussion and Analysis of Financial Condition and Results of Operations, New Orders and Backlog.”) Because of possible future changes in delivery schedules and cancellations of orders, backlog at any particular date is not necessarily representative of actual revenue to be expected for any succeeding period, and actual revenue for the year may not meet or exceed the backlog represented. We may experience significant cancellations of contracts that were previously booked and included in backlog. During fiscal year 2008, we received a termination for the convenience of the Government related to several delivery orders under the Stone Face II IDIQ contract. During fiscal year 2009, we negotiated a portion of these terminated efforts and reduced backlog by approximately \$3.7 million. We anticipate the remaining balance of approximately \$0.9 million will be settled in future periods.

Research and Development

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

We conduct R&D as part of our own R&D investment. We believe that our investment in R&D provides us with a significant competitive advantage. R&D expenses incurred by us were approximately \$14,482,000, \$13,116,000, and \$14,204,000 in fiscal years 2009, 2008, and 2007, respectively. As a percent of revenue, R&D equated to 7.1%, 7.0%, and 8.3% in fiscal years 2009, 2008, and 2007, respectively.

Competition

The global security market is highly competitive and we expect that competition will continue to increase in the future. Some of our current and potential competitors have significantly greater technical, manufacturing, financial, and marketing resources than we do. Substantial competition could impose pricing pressure on sales of our products, could develop and introduce new products meeting market demand more quickly than we can, and could result in lower revenue and decreased sales, which would have a materially adverse effect on our financial condition and operating results.

The competition for competitive-bid contracts differs from the competition for sole-source contracts. Companies competing for competitive-bid contracts prepare bids and proposals in response to either commercial or Government requests and typically compete on price. Potential suppliers compete informally for sole-source contracts through R&D investment and marketing efforts. Companies competing for sole-source contracts attempt to identify the customer's requirements early and invest in solutions so that they can demonstrate a distinguishing expertise or technology promptly after the customer has identified a signal processing requirement. The principal factors of competition for sole-source contracts include investments in R&D; the ability to respond promptly to Government needs; and product price relative to performance, quality, and customer support. We believe that we compete favorably on each of these factors.

Our current competitors include Argon ST, BAE Systems, The Boeing Company, General Dynamics, Harris Corporation, ITT Corporation, L-3 Communications, Lockheed Martin, Northrop Grumman, QinetiQ, Raytheon Corporation, Sierra Nevada Corporation, Science Applications International Corporation, and Thales.

Proprietary Rights

The United States Government has rights to most of the technology that we have developed under Government contracts, including rights to permit other companies, including our competitors, to use this technology to develop products for the United States Government. To our knowledge, the United States Government has not exercised these rights related to our products.

As of October 31, 2009, we had five issued patents. We believe that, given the rapidly changing nature of signal collection and processing technology, our future success will depend primarily on the technical competence and creative skills of our personnel, rather than the legal protection afforded by patents. We attempt to protect our trade secrets and other proprietary information through agreements with customers, employees, and consultants, and through other security measures. To the extent we wish to assert our patent rights, we cannot be sure that any claims of our patents will be sufficiently broad to protect our technology. In addition, there can be no assurance that any patents issued to us will not be challenged, invalidated, or circumvented; that any rights granted under these patents will provide us adequate protection; or that there will be sufficient resources to protect and enforce our rights. For example, we have filed a patent infringement claim and countersuits related to the claim have been filed against us. For further details, please see "Item 3: Legal Proceedings." In addition, the laws of some foreign countries may not protect our proprietary rights to the same extent as do the laws of the United States. Although we do not believe that we are infringing upon the intellectual property rights of others, it is possible that such a claim will be asserted against us in the future. In the event any third party makes a claim against us for infringement of patents or other intellectual property rights of a third party, such claims, with or without merit, could be time-consuming and result in costly litigation. In addition, we could experience loss or cancellation of customer orders, could experience product shipment delays, or could be subject to significant liabilities to third parties. If our products were found to infringe on a third party's proprietary rights, we could be required to enter into royalty or licensing agreements to continue selling our products. Royalty or licensing agreements, if required, may not be available under acceptable terms or at all, which could seriously harm our business. Our involvement in any patent dispute or other intellectual property dispute or action to protect trade secrets and expertise could have a materially adverse effect on our business.

Government Regulations

We must comply with regulatory requirements of federal, state, and municipal authorities applicable to companies contracting with the United States Government and its agencies, including regulations concerning employment obligations and affirmative action, workplace safety, and protection of the environment. Most importantly, we must comply with detailed Government procurement and contracting regulations and with United States Government security regulations, certain of which carry substantial penalties for noncompliance or misrepresentation in the course of negotiations. Failure to comply with our Government procurement or contracting obligations or security obligations could result in penalties imposed on us or suspension from Government contracting, which would prevent us from selling our products to the United States Government, severely limiting our ability to operate our business and generate revenue, resulting in a materially adverse effect on our financial condition and operating results.

Additionally, all of our products and services are subject to United States export laws and regulations. Exports of commercial products, software, technology, and services are subject to controls under the Export Administration Regulations (EAR) and exports of military products, software, technical data, and services are subject to controls under the International Traffic in Arms Regulations (ITAR). Our ability to export is dependent upon our ability to obtain the appropriate export authorization from the United States Government. If we are unable to receive the appropriate export authorization, we may be prohibited from selling our products and services internationally, which may limit our sales and may have a material, adverse effect on growing this portion of our business.

While compliance with applicable regulations has not adversely affected our operations in the past, we cannot be sure that we will continue to be in compliance in the future or that these regulations will not change, resulting in increased operational costs.

Employees

Our success is dependent on the skills and dedication of our employees. Our staff includes a mix of experienced professionals and recent college graduates who, together, provide experienced thought leadership with the latest technical skills to meet the challenges presented by our customers. As of December 11, 2009, we had 794 employees. Our business requires the majority of our technical employees to obtain and retain security clearances from the United States Government, which limits the available pool of eligible candidates for such positions to those who can satisfy the prerequisites to obtaining these clearances. We have a United States Government-sanctioned security program that allows staff members to obtain appropriate clearances. Approximately 79% of our staff has security clearances. Our future success is dependent on attracting, retaining, and motivating qualified key management and technical personnel, whose loss could adversely affect our business materially. We offer a robust employee benefits program and challenging work environment to maintain high employee morale.

Item 1A: Risk Factors

Our future performance is subject to a variety of risks. If any of the following risks actually occurs, our business could be harmed and the trading price of our common stock could decline. In addition to the following disclosures, please refer to the other information contained in this report, including consolidated financial statements and the related notes.

Risks Related to our Business and Operations

Any reduction in Government spending on ISR could materially adversely impact our revenues, results of operations, and financial condition. Historically, defense and intelligence agencies of the United States Government have accounted for almost all of our revenues. There are risks associated with programs that are subject to appropriation by Congress, which could be potential targets for reductions in funding to pay for other programs. Future reductions in United States Government spending on global security or future changes in the kind of products or services required by the United States Government agencies could limit demand for our products and services, which could result in failure to achieve anticipated revenues, resulting in a materially adverse effect on our operating results and financial condition.

In the event there are shifts in responsibilities and functions among the Government agencies responsible for United States defense and intelligence, it could result in a reduction of orders for global security by the defense and intelligence agencies that have historically been our major customers. Our relationships with other Government agencies to which responsibilities and functions for our contracts have shifted may not be as strong as our relationships with current customer agencies. Accordingly, a reduction in contracts from our customer agencies may not be offset by contracts from other United States Government agencies. Even if other agencies increase spending for global security, we may not secure the same amount of work from these agencies. As a result, demand for our products and services could decline, resulting in a decrease in revenues, and could adversely affect our operating results and financial condition materially.

We depend on revenues from a few significant contracts, and any loss, cancellation, reduction, or delay in these contracts could harm our business. From time to time, including recent periods, we have derived a material portion of our revenue from one or more individual contracts that could be terminated by the customer in full or in part at the customer's discretion. In the past, we have experienced a significant reduction of, and stop work order on, one of our largest contracts. We expect that in future periods we may again enter into individual contracts with significant revenue concentrations. In addition, the majority of our contracts are with a limited number of Government agencies. If our individually large contracts were terminated or substantially reduced, we could fail to achieve expected revenues and net income.

United States Government contracts are generally not fully funded at inception and funding may be terminated or reduced at any time. We act as a prime contractor or subcontractor for many different United States Government programs. Department of Defense and intelligence contracts typically involve long lead times for design and development and are subject to significant changes in contract scheduling. Programs can be partially funded initially, and additional funds may or may not be allocated. The termination or reduction of funding for a Government program would result in a loss of anticipated future revenues attributable to that program.

Our backlog as of October 31, 2009, was approximately \$139.1 million and includes orders under awards that in some cases extend several years. The actual receipt of revenues on awards included in backlog may never occur or may change because a program schedule could change

or the program could be canceled, or a contract could be reduced, modified, or terminated early.

We depend on revenues from a few significant customers; the loss of any significant customer could have an adverse effect on our business. Our success will depend on our continued ability to develop and manage relationships with significant customers. The markets in which we sell our products are dominated by a relatively small number of Governmental agencies and allies of the United States Government, thereby limiting the number of potential customers. Our dependence on large orders from a relatively small number of customers makes our relationship with each customer critical to our business. We cannot be sure that we will be able to retain our largest customers, that we will be able to attract additional customers, or that our customers will continue to buy our products and services in the same amounts as in prior years. The loss of one or more of our largest customers, any reduction or delay in sales to these customers, our inability to successfully develop relationships with additional customers, or future price concessions that we may have to make could significantly harm our business.

Any decrease in expected product sales during a period could adversely impact our revenues, results of operations, and financial condition. From time to time, we have derived a significant portion of our revenue from product sales. In recent periods, however, we have been focusing on sales of systems and software, and targeting larger programs. In addition, we have experienced some seasonality in product sales to the United States Government, with more product sales occurring in the second half of the fiscal year than in the first. The amount and timing of Government purchases of products is unpredictable, and fluctuates significantly from period to period, making it difficult for us to predict the amount of revenue we will generate from product sales in any particular period, and causing our revenues to fluctuate from period to period. If we are not able to generate revenues from product sales as expected in a particular period, we may fail to meet our revenue expectations and the expectations of industry analysts and investors, which could cause our stock price to decline.

If we are unable to recruit, train, and retain key personnel with required security clearances, our ability to develop, introduce, and sell our products may be adversely impacted. Our ability to execute our business plan is contingent upon successfully attracting and retaining qualified employees who obtain, or are able to obtain and retain, necessary Government security clearances. If we fail to attract and retain qualified employees who can obtain the necessary security clearances, our business could be significantly harmed. The loss of the services of our qualified employees, the inability to attract or retain qualified personnel in the future, or delays in hiring required personnel could negatively impact our ability to develop, introduce, and sell our products. In addition, employees may leave us and subsequently compete against us.

Many of the personnel we hire will need United States Government security clearances in order to perform tasks required on our Government contracts, and without such clearances, employees cannot work on the majority of our projects. We have found that there is a shortage of qualified personnel possessing the necessary clearances, and new security clearances are taking longer to be granted. If we are not able to obtain security clearances for our personnel where required, they will be unable to perform tasks requiring clearances, and we may be unable to satisfy the terms of our contracts, resulting in customer dissatisfaction and possible loss of current or future contracts.

Stop-work orders could negatively impact our operating results and financial condition. Almost all of our contracts contain stop-work clauses that permit the Government or other contracting party, at any time, by written order, to stop work on all or any part of the work called for by the contract for a period of ninety days. Within the ninety-day period, the other contracting party may cancel the stop-work order and resume work or terminate all or part of the work covered by the stop-work order. There can be no assurance that stop-work orders will not be received in future periods. If we receive stop work orders, our orders and backlog may be reduced, and we may fail to achieve anticipated revenues.

Unexpected contract terminations could negatively impact our operating results and financial condition. Almost all of our contracts contain termination clauses that permit contract termination upon default or for the convenience of the other contracting party. In either case, termination could adversely affect our operating results and financial condition. During the third quarter of fiscal year 2008, we received a termination for the convenience of the Government related to several delivery orders under the Stone Face II IDIQ contract. During fiscal year 2009, we reduced backlog by approximately \$3.7 million as a result of the settlement of a portion of these terminated efforts. We anticipate the remaining balance of approximately \$0.9 million will be settled in future periods. We received no such terminations in fiscal year 2007.

If we are unable to comply with complex Government regulations governing security and contracting practices, we could be disqualified as a supplier to the United States Government. As a supplier to United States Government defense and intelligence agencies, we must comply with numerous regulations, including those governing security and contracting practices. Failure to comply with these procurement regulations and practices could result in fines being imposed against us or our suspension for a period of time from eligibility for bidding on, or for award of, new Government contracts. If we are disqualified as a supplier to Government agencies, we will lose most, if not all, of our customers, revenues from sales of our products would decline significantly, and our ability to continue operations would be seriously jeopardized. Among the causes for fines or disqualification are violations of various statutes, including those related to procurement integrity, the Truth In Negotiations Act, export control, United States Government security regulations, employment practices, protection of the environment, accuracy of records in the recording of costs, and foreign corruption.

In addition, the programs we support and systems we develop, install and maintain involve managing and protecting information involved in intelligence, national security and other classified Government functions. A security breach by us or our employees in the course of our development, production or service activities could cause serious harm to our business, damage our reputation and prevent us from being eligible for further work on critical classified systems for United States Government customers.

The Government may investigate and make inquiries of our business practices and conduct audits of contract performance and cost accounting. The Government audits and investigations can take several years to complete. Depending on the results of these audits and investigations, the Government may make claims against us or take exception to certain costs we determined to be recoverable. In the period management determines recoverability is not likely, operating income would be reduced.

For example, during fiscal year 2008, the Defense Contract Audit Agency (DCAA) advised us that we are considered a major contractor and are subject to more audits and oversight. The results of these and future audits could result in sustained claims against us. In those cases where we believe that the Government is likely to prevail, we have reduced operating income by establishing appropriate reserves for the estimated loss.

We implemented a new multi-rate structure in fiscal year 2009 that we believe should have several positive effects on our business. The Defense Contract Audit Agency performed initial reviews of our new rate structure without taking exception. However, we believe this new rate structure is subject to further audit. If the United States Government does not agree with our approach, our revenues and operating income could be reduced.

Our business depends upon our relationships with, and the performance of, our prime contractors. We expect to continue to depend on relationships with other contractors for a substantial portion of our revenues in the foreseeable future. Our business, prospects, financial condition, or operating results could be adversely affected if other contractors terminate or reduce their subcontracts or relationships with us, either because they choose to establish relationships with our competitors or because they choose to directly offer services that compete with our business. Our business also suffers if the prime contractor fails to win the contract, or if the Government terminates or reduces these other contractors' programs or does not award them new or additional contracts.

In addition, on those contracts for which we are not the prime contractor, the United States Government could terminate a prime contract under which we are subcontractor, regardless of the quality of our performance as a subcontractor. A prime contractor's performance deficiencies could adversely affect our status as a subcontractor on the program, jeopardize our ability to collect award or incentive fees, cause customers to delay payments, and result in contract terminations.

Continued competition in ISR may lead to a reduction in our revenues and market share. The global security market is highly competitive and we expect that competition will continue to increase in the future. Our current competitors have significantly greater technical, manufacturing, financial, and marketing resources than we do. We expect that more companies will enter the market for global security, possibly resulting in pricing pressures on our products and services. We may not be able to compete successfully against either current or future competitors. Increased competition could result in reduced revenue, lower margins, or loss of market share, any of which could significantly harm our business. Our competitors may introduce improved products with lower prices, and we would have to do the same to remain competitive.

Unexpected increases in the cost to develop or manufacture our products under fixed-price contracts may cause us to experience unreimbursed cost overruns resulting in reduced profit margins or increased loss provisions. A significant portion of our revenue is derived from fixed-price contracts. Under fixed-price contracts, unexpected increases in the cost to develop or manufacture a product, whether due to inaccurate estimates in the bidding process, unanticipated increases in materials costs, unfavorable indirect rate variances, inefficiencies, or other factors, are borne by us. We have experienced cost overruns in the past that have resulted in losses on certain contracts, and may experience additional cost overruns in the future. Such cost overruns would increase our operating expenses, reduce our net income and earnings per share, and could have a material, adverse effect on our future results of operations and financial condition.

Fixed-price contracts use percentage-of-completion accounting to determine profit margins. Under generally accepted accounting principles, unexpected cost over-runs can change the percentage completion estimates and result in reduced profit margins and the reversal of previously recognized profits in addition to reducing future period profits. Although we believe that our profit margins are fairly stated and that adequate provisions for losses for our fixed-price contracts are recorded in our financial statements as required under accounting principles generally accepted within the United States, there can be no assurance that our contract profit margins will not decrease or our loss provision will not increase in the future.

Our market is subject to rapid technological change, and to compete effectively, we must continually introduce new signal processing solutions that achieve market acceptance. The market for our products is characterized by rapidly changing technology, frequent new product introductions, changes in customer requirements, and evolving industry standards. We believe that we have been successful to date in identifying certain global security needs early, investing in research and development to meet these needs, and delivering products before our competitors. We believe that our future success will depend upon continued development and timely introduction of products capable of satisfying emerging global security needs. However, we expect that new requirements will continue to emerge. Our future performance will depend on the successful development, introduction, and market acceptance of new and enhanced products that address these new requirements. The introduction of new and enhanced products may cause our customers to defer or cancel orders for existing products. There can be no assurance that we will be able to develop and market new products successfully in the future or respond effectively to new requirements, or that new products introduced by others will not render our products or technologies noncompetitive or obsolete.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

We also may not be able to develop the underlying core technologies necessary to create new products and enhancements or to license these technologies from third parties. Product development delays may result from numerous factors, including:

- Changing product specifications and customer requirements
- Difficulties in hiring and retaining necessary technical personnel
- Difficulties in reallocating engineering resources and overcoming resource limitations
- Difficulties with contract manufacturers
- Changing market or competitive product requirements
- Unanticipated engineering complexities

The development of new, technologically advanced products is a complex and uncertain process requiring high levels of innovation and highly skilled engineering and development personnel, as well as the accurate anticipation of technological and market trends. We cannot ensure that we will be able to identify, develop, manufacture, market, or support new or enhanced products successfully, or on a timely basis, if at all. Further, we cannot ensure that our new products will gain market acceptance or that we will be able to respond effectively to product announcements by competitors, technological changes, or emerging industry standards. Any failure to respond to technological change would significantly harm our business.

We derive revenue from royalties, the timing of which can be difficult to predict and sustain. We derive royalty income from the sale of products licensed to other third parties for sale, and expect to continue to derive royalty income in the future. Revenue derived from royalties provides greater profitability to us than revenue from the sale of our products and services. Accordingly, our operating income and earnings per share will be impacted by the comparative mix of revenue from our digital signal processing products, systems, and services and revenue derived from royalty income. Although we have licensed one of our products for sale by a third party, and expect to increase our efforts in future periods, we have not historically devoted significant resources to licensing our technologies. We believe there is a life cycle to the technology upon which this royalty revenue is based. We anticipate that royalty revenues from this agreement could decline in future periods.

Our future ability to generate royalty income depends upon:

- Our ability to secure patent coverage for our technologies and enter into license agreements with potential licensees
- The ability of our licensees to develop and commercialize successful products that incorporate our technologies
- The rate of adoption of our technologies by, and the incorporation of our technologies into products of, other parties

In addition, royalty-based income is subject to the willingness and ability of licensees to design and assemble products using our technology, the pricing and demand for products incorporating our technology, and our ability to negotiate and enforce agreements for the determination and payment of royalties. It is difficult to predict when we will enter into additional license agreements, if at all. The timing of our receipt of royalty payments, including payments from our existing royalty-based arrangement, is also difficult to predict, and may fluctuate from period to period, causing our revenues to fluctuate from period to period, which may significantly impact our quarterly or annual operating results. If we are not able to generate royalty income as expected in a particular period, we may fail to meet our revenue expectations, our operating income may decline disproportionately, and we may fail to meet the expectations of industry analysts and investors, which could cause our stock price to decline.

Our future revenues are inherently unpredictable, our operating results are likely to fluctuate from period to period, and if we fail to meet the expectations of securities analysts or investors, our stock price could decline significantly. Our quarterly and annual operating results have fluctuated in the past and are likely to fluctuate significantly in the future due to a variety of factors, some of which are outside our control. Accordingly, we believe that period-to-period comparisons of our results of operations are not meaningful and should not be relied upon as indications of future performance. Some of the factors that could cause our quarterly or annual operating results to fluctuate include conditions inherent in Government contracting and our business such as the timing of cost and expense recognition for contracts, the United States Government contracting and budget cycles, and contract closeouts. Because we base our operating expenses on anticipated revenue trends and a high percentage of our expenses are fixed in the short term, any delay in generating or recognizing forecasted revenues could significantly harm our business. Fluctuations in quarterly results, competition, or announcements of extraordinary events such as acquisitions or litigation may cause earnings to fall below the expectations of securities analysts and investors. In this event, the trading price of our common stock could significantly decline. In addition, there can be no assurance that an active trading market will be sustained for our common stock. The stock market in recent years has experienced extreme price and volume fluctuations that have particularly affected the market prices of many technology companies. These fluctuations, as well as general economic and market conditions, may adversely affect the future market price of our common stock.

Delays in the receipt of contracts could negatively impact our business. During our history, the receipt of certain final contracts has periodically been delayed to periods later than originally expected. Delays in the receipt of such orders could result in revenues falling short of estimates. On some of these contracts, we will make expenditures in advance of receipt of the final contract in anticipation of meeting the expected timetables, and will from time to time hire personnel in anticipation of receipt of the contract. If the contract is delayed, these costs are not covered. In addition, gross margins and net income will decrease if we elect to hold our cost structure in place while awaiting the award of

delayed contracts.

We have been named as a party to securities class action and derivative action lawsuits, which may require significant management time and attention and legal expense, and may result in an unfavorable outcome, which could have a material, adverse effect on our business, financial condition, results of operations, and cash flows. Applied Signal and one officer and one former officer have been named in a purported securities class action complaint filed in the United States District Court, Northern District of California *In re Applied Signal Technology Inc. Securities Litigation*, Master File No. 4:05-cv-1027 (SBA). The amended consolidated complaint is brought on behalf of a putative class of persons who purchased our securities during a class period of August 24, 2004, through February 22, 2005. The complaint alleges that false and misleading statements regarding us were issued during the class period. In addition, we have been named as a nominal defendant in a purported shareholder derivative action filed in the Superior Court, State of California as *Shoemaker v. Devine et al.*, No. 1:08-CV-119810. It is brought on purported behalf of the Company, against current and former members of the Board of Directors, our Chief Financial Officer, and our former Chief Executive Officer, asserting that these individuals breached their fiduciary duties, based on essentially the same allegations as the class action case. Although the parties have agreed to a settlement, which will be paid by our insurers, and on August 3, 2009, the District Court gave final approval to a settlement of this case, a purported appeal of a ruling denying a motion to intervene has been filed. Accordingly, we expect to continue to incur legal fees in responding to these lawsuits, including expenses for the reimbursement of legal fees of present and former officers and directors under indemnification obligations. The expense of defending such litigation may be significant. The amount of time to resolve this and any additional lawsuits is unpredictable and these actions may divert management's attention from the day-to-day operations of our business, which could adversely affect our business, results of operations, and cash flows.

Our results of operations could be negatively impacted if we are required to write off inventory deemed not saleable or usable. Some of our products or raw materials may become obsolete or unusable while in inventory. This could be due to changing customer specifications, decreases in demand for existing products, or changes in Government spending on signal intelligence. Work in process deemed not saleable is written off to contract costs in our statement of operations, while unusable raw materials are written off to general and administrative expenses.

We may lose sales if our suppliers fail to meet our needs. Although we procure most of our parts and components from multiple sources or believe that these components are readily available from numerous sources, certain components are available only from sole sources or from a limited number of sources. While we believe that substitute components or assemblies could be obtained, use of substitutes would require development of new suppliers or would require us to re-engineer our products, or both, which could delay shipment of our products and could have a materially adverse effect on our operating results and financial condition.

Our failure to protect our intellectual property may significantly harm our business. Our success and ability to compete is dependent in part on our proprietary technology. We rely on a combination of patent, copyright, trademark, and trade secret laws, as well as confidentiality agreements to establish and protect our proprietary rights. We license certain of our proprietary technology to customers, and we rely largely on provisions of our licensing agreements to protect our intellectual property rights in this technology. To date, we have relied primarily on proprietary processes and know-how to protect our intellectual property. Although we have filed applications for several patents, five of which we currently hold, we cannot ensure that any patents will be issued as a result of pending patent applications or that our issued patents will be upheld. Any infringement of our proprietary rights could result in significant litigation costs, and any failure to adequately protect our proprietary rights could result in our competitors offering similar products, potentially resulting in loss of a competitive advantage and decreased revenues. Despite our efforts to protect our proprietary rights, existing patent, copyright, trademark, and trade secret laws afford only limited protection. In addition, the laws of some foreign countries do not protect our proprietary rights to the same extent as do the laws of the United States. Attempts may be made to copy or reverse engineer aspects of our products or to obtain and use information that we regard as proprietary. Accordingly, we may not be able to prevent misappropriation of our technology or deter others from developing similar technology. Furthermore, policing the unauthorized use of our products is difficult. Litigation may be necessary in the future to enforce our intellectual property rights or to determine the validity and scope of the proprietary rights of others. This litigation could result in substantial costs and diversion of resources, and could significantly harm our business.

The United States Government has rights to our technology that limits our intellectual property rights. Although we seek to protect the competitive benefits we derive from our patents, proprietary information, and other intellectual property, we do not have the right to prohibit the United States Government from using certain technologies developed or acquired by us or to prohibit third party companies, including our competitors, from using those technologies in providing products and services to the United States Government. The United States Government has the right to royalty-free use of technologies that we have developed under United States Government contracts. We may commercially exploit those Government-funded technologies and may assert our intellectual property rights against other non-Government users of technology developed by us, but we may not be successful in our efforts to do so.

Claims that we infringe third-party intellectual property rights could result in significant expenses or restrictions on our ability to sell our products. It is possible that from time to time, other parties may assert patent, copyright, trademark, and other intellectual property rights to technologies and in various jurisdictions that are important to our business. Any claims asserting that our products infringe or may infringe proprietary rights of third parties, if determined adverse to us, could significantly harm our business. Any claims, with or without merit, could result in costly litigation, divert the efforts of our technical and management personnel, cause product shipment delays, or require us to enter into royalty or licensing agreements, any of which could significantly harm our business. For example, we have filed a patent infringement claim and countersuits related to the claim have been filed against us. For further details, please see "Item 3: Legal Proceedings". Royalty or licensing

agreements, if required, may not be available on terms acceptable to us, if at all. In addition, our agreements with our customers typically require us to indemnify our customers from any expense or liability resulting from claimed infringement of third-party intellectual property rights. In the event a claim against us was successful and we could not obtain a license to the relevant technology on acceptable terms, license a substitute technology, or redesign our products to avoid infringement, our business would be significantly harmed.

Risks Related to Acquisitions

We intend to continue to pursue selective acquisitions of businesses or complementary technologies, which could involve costs and other risks, and may not provide the expected benefits. Over the last several years, we have made acquisitions and investments in areas complementary to our historic COMINT offerings, such as our acquisition of Dynamics Technology, Inc. and Pyxis Engineering LLC and our research and development into the ELINT market. As a result, we have expanded our product offerings, approached new customers, and entered into new markets for advanced digital signal processing products, systems, and services in support of ISR for global security.

Although we intend to continue to grow by acquisition, expand into new markets, and invest in products and markets complementary to our existing and new businesses, we may be unable to realize the benefits of our investments. Acquisitions could require significant capital infusions and could involve many risks, including, but not limited to, the following:

- We may have to issue convertible debt or equity securities to complete an acquisition, which may dilute the interests of our stockholders and could adversely affect the market price of our common stock
- An acquisition may negatively impact our results of operations because it may require us to write down amounts related to goodwill and amortize other intangible assets, or incur or assume substantial debt or liabilities, or it may cause adverse tax consequences, substantial depreciation, or deferred compensation charges
- We may encounter difficulties in assimilating and integrating the business, products, technologies, personnel, or operations of companies that we acquire
- Certain acquisitions may impact our relationship with existing or potential partners who are competitive with the acquired business, products, or technologies
- Acquisitions may require significant capital infusions and the acquired businesses, products, or technologies may not generate sufficient value to justify acquisition costs
- An acquisition may disrupt our ongoing business, divert resources, increase our expenses, and distract our management
- Acquisitions may involve the entry into a market in which we have little or no prior experience
- Key personnel of an acquired company may decide not to work for us

If any of these risks occurred, it could adversely affect our business, financial condition and operating results. In addition, we may be unable to identify potential future acquisition candidates, or reach agreement on acceptable terms with potential acquisition candidates, adversely impacting our ability to grow by acquisition. If we do pursue and complete any acquisitions, it is possible that we may not realize the anticipated benefits from such acquisitions or that the market will not view such acquisitions positively. We may not be successful in our expansion of our products and markets, and may not realize the benefits of our investments in new markets.

We may be unable to successfully integrate the businesses of acquired companies. We will have to integrate the operations of any acquired company, including Pyxis Engineering, into our combined operations. Integration may require significant efforts, including the coordination of future development and sales and marketing efforts. We may find it difficult to integrate operations. Former customers of the acquired company may decline to do business with us. The challenges involved in the integration of the acquisition include, but are not limited to, the following:

- Retaining the customers and strategic partners of the acquired company and enhancing the relationship of the combined company with current and future customers and strategic partners of the acquired company
- Integrating and retaining the key employees from the acquired company, as well as retaining key employees of ours performing similar services to those offered by the acquired company prior to the acquisition
- Coordinating development activities to enhance the services offered by the acquired company and us
- Expanding the services offered by the combined company following the acquisition
- Effectively managing the diversion of management's attention from business matters to integration issues
- Combining development, sales, and marketing activities effectively and quickly
- Combining our business culture with the business culture of the acquired company
- Enhancing the internal controls of the operations acquired in the acquisition

Even if we are able to integrate the acquisition with our operations, there can be no assurance that the anticipated benefits will be achieved. The failure to achieve such benefits could adversely affect our business, results of operations, and financial condition.

Since we have surpassed the 750 employee size standard eligibility for new awards under the Small Business Innovative Research ("SBIR") program, any "small business" company we acquire will likely lose its eligibility to bid on new SBIR contracts once it is acquired by us. In addition, the imposition of Small Business Administration rules requiring small businesses to recertify as to their small business status before

award of options or extensions to existing contracts may limit our ability to meet our growth objectives from acquired small businesses. For these or other reasons, we may be unable to retain key customers of acquired companies or to retain or renew contracts of acquired companies. Moreover, any acquired business may fail to generate the revenue or net income we expected or produce the efficiencies or cost-savings that we anticipated. Any of these outcomes could materially adversely affect our operating results.

We expect to incur significant costs associated with the acquisition. We expect that our acquisitions could be of smaller companies, such as our acquisition of Pyxis, operating without a large infrastructure or robust internal controls. We will need to integrate the operations of these acquired companies, including Pyxis, with our own operations, and ensure the development of appropriate controls and procedures commensurate with the controls and procedures with which we operate all of our other operations. We expect that we will incur direct transaction costs associated with such acquisitions, including direct costs of the acquisition as well as liabilities to be accrued in connection with the acquisition. In addition, we may incur charges to operations, which are not currently reasonably estimable, in the quarter in which the acquisition is completed or the following quarters, to reflect costs associated with integrating the acquisition. There is no assurance that we will not incur additional material charges in subsequent quarters to reflect additional costs associated with the acquisition. If the benefits of the acquisition do not exceed the costs of the acquisition, our financial results may be adversely affected.

We may incur significant amounts of goodwill associated with acquisitions. We expect that any acquisition we complete will be accounted for by using the purchase method of accounting, such as in our acquisition of Pyxis Engineering. A portion of the purchase price in such acquisitions will be allocated to identifiable tangible and intangible assets and assumed liabilities based on valuation analysis of fair values at the date of consummation of the acquisition. Any excess purchase price will be allocated to goodwill. Goodwill and certain other intangible assets with indefinite useful lives are not amortized but are reviewed at least annually for impairment, or more frequently if there are indications of impairment. All other intangible assets are subject to periodic amortization. We evaluate the remaining useful lives of other intangibles each quarter to determine whether events and circumstances warrant a revision to the remaining period of amortization. When the combined company performs future impairment tests, it is possible that the carrying value of goodwill or other intangible assets could exceed their implied fair value and therefore would require adjustment. Such adjustment would result in a charge to operating income in that period. Once adjusted, there can be no assurance that there will not be further adjustments for impairment in future periods.

Item 1B: Unresolved Staff Comments

None.

Item 2: Properties

Our corporate offices, located in Sunnyvale, California, also serve as our primary research and development, engineering, production, marketing, and administrative center. In addition, we maintain eleven additional offices within the United States. The following table lists the properties we lease, as of October 31, 2009.

City	State	Leased space (sq. ft.)	Lease Expiration Date
Sunnyvale	California	266,077	March 2012
Torrance	California	39,692	June 2015
Anaheim	California	15,000	October 2016
Anaheim	California	5,457	May 2010
Torrance	California	2,008	October 2010
Annapolis Junction	Maryland	61,038	April 2016
Salt Lake City	Utah	36,265	October 2014
Allen	Texas	32,000	February 2011
Herndon	Virginia	15,250	March 2011
Arlington	Virginia	9,523	June 2013
Fairborn	Ohio	2,524	July 2010
Tampa Bay	Florida	2,309	April 2010

Our business requires that we maintain a facility clearance, sponsored and approved by the United States Government, at most of our offices. This approval could be suspended or revoked if we are found not to have complied with security regulations applicable to such facilities. Any

revocation or suspension of such approval that materially delayed delivery of our products to customers would have a material, adverse impact on our ability to manufacture and sell our products and operate our business. Although we have adopted policies directed at assuring our compliance with relevant regulations, there can be no assurance that the approved status of our facilities will continue without interruption.

Item 3: Legal Proceedings

We are subject to litigation, from time to time, in the ordinary course of business including, but not limited to, allegations of wrongful termination or discrimination, or Governmental agency investigations. As a Government contractor, we may also be subject to investigations by the United States Government for alleged violations of procurement or other federal laws. Under present Government procurement regulations, if judged in violation of procurement or other federal civil laws, we could be suspended or barred from eligibility for awards of new Government contracts.

On March 11, and July 19, 2005, purported securities class action complaints were filed in the United States District Court, Northern District of California. The cases were considered as *In re Applied Signal Technology Inc. Securities Litigation*, Master File No. 4:05-cv-1027 (SBA). The amended consolidated complaint is brought on behalf of a putative class of persons who purchased our Company's securities during a class period of August 24, 2004, through February 22, 2005. The complaints name us, our former Chief Executive Officer, and our Chief Financial Officer as defendants, and allege that false and misleading statements regarding us were issued during the class period. The parties have agreed to a settlement, which will be paid by our insurers. On August 3, 2009, the District Court gave final approval to a settlement of this case. A purported appeal of a ruling denying a motion to intervene has been filed.

On August 12, 2008, a purported shareholder derivative action was filed in the Superior Court, State of California. *Shoemaker v. Devine et al.*, No. 1:08-CV-119810. It is brought on purported behalf of the Company, against current and former members of the Board of Directors, our Chief Financial Officer, and our former Chief Executive Officer, asserting that these individuals breached their fiduciary duties, based on essentially the same allegations as the class action case. No damages are specified. As the case is brought on purported behalf of the Company, there is no possible loss that might be incurred as a result of this proceeding.

On May 18, 2009, we filed a complaint for patent infringement in the United States District Court for the Northern District of California, Case Number 3:09-cv-2180-SBA, against Emerging Market Communications, Paradise Datacom LLC, and ViaSat, Inc. On June 12, 2009, we filed an amended complaint adding EMC Satcom Technologies, Inc. as a defendant. All of the defendants have been served with the complaint and have answered; each asserts standard patent case defenses. On October 15, 2009, ViaSat, Inc. filed a counterclaim against us for infringement of four patents. On November 9, 2009, we answered those counterclaims, denying infringement and alleging that the ViaSat patents are invalid. The Court held a case management conference on November 19, 2009, and set a claim construction hearing for September 23, 2010. No trial date has been set. The Court referred the parties to a settlement conference with a Magistrate Judge in the Northern District of California. That conference is to be preceded by informal discussions between the parties, and will take place on March 25 and 26, 2010. If we are unable to come to a resolution of the patent infringement claims with the defendants, we expect to vigorously pursue our claims.

Item 4: Submission of Matters to a Vote of Security Holders

There were no matters submitted to a vote of security holders during the fourth quarter of the fiscal year.

Part II

Item 5: Market for Registrant's Common Equity, Related Shareholder Matters, and Issuer Purchases of Equity Securities

Selected Common Stock Data

Our common stock trades on the NASDAQ Global Select Market under the symbol "APSG." As of October 30, 2009, the closing price of our common stock, as reported on NASDAQ, was \$20.49, and we had approximately 511 registered shareholders of record. The following table sets forth the high and low closing prices for our common stock over the eight quarters ending October 31, 2009.

Closing prices, as reported on NASDAQ	High	Low
Fiscal year ended October 31, 2008		
First quarter	\$14.42	\$12.58
Second quarter	\$14.05	\$11.00

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Third quarter	\$15.95	\$13.33
Fourth quarter	\$18.15	\$13.88
Fiscal year ended October 31, 2009		
First quarter	\$19.74	\$13.65
Second quarter	\$21.55	\$16.93
Third quarter	\$26.47	\$17.81
Fourth quarter	\$26.22	\$20.49

The company has paid dividends at the rate of \$0.50 per share per annum, payable quarterly, since fiscal year 2004. Continued payment of the dividend is subject to approval by the Board of Directors, and is reviewed quarterly.

The continued payment of dividends and the amount thereof in the future will depend on a number of factors, including our financial condition, capital requirements, results of operations, future business prospects, and other factors that our Board of Directors may deem relevant.

We did not repurchase any of our equity securities during the fourth quarter of fiscal year 2009 nor issue any securities that were not registered under the Securities Act of 1933.

Comparison of Shareholder Return

Set forth below is a line graph comparing the annual percentage in the cumulative total return on our common stock with the cumulative total return for the Standard & Poor's MIDCAP 400 Index (S&P MIDCAP 400), the Standard and Poor's Aerospace and Defense Index (S&P Aerospace and Defense), and the Russell 2000 Index (Russell 2000) for the five-year period commencing October 31, 2004, and ending on October 31, 2009.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

	Cumulative Total Return					
	10/04	10/05	10/06	10/07	10/08	10/09
Applied Signal Technology, Inc.	100.00	57.99	51.65	51.70	66.85	78.29
S&P Midcap 400	100.00	117.65	133.45	156.16	99.22	117.26
S&P Aerospace & Defense	100.00	114.56	147.21	190.96	121.04	129.42
Russell 2000	100.00	112.08	134.47	146.94	96.74	102.99

* Assumes that \$100.00 was invested on 10/31/04 in our common stock and in each index, and that all dividends have been reinvested. Shareholder returns over the indicated period should not be considered indicative of future shareholder returns.

This stock performance graph does not constitute soliciting material, and should not be deemed filed or incorporated by reference into any other company filing under the Securities Act of 1933 or the Securities Exchange Act of 1934, except to the extent we specifically incorporate this stock performance graph by reference therein.

Item 6: Selected Financial Data

(In thousands, except per share data)

Summary of Operations:	Year Ended October 31,				
	2009	2008	2007	2006	2005
Revenues from contracts	\$196,371	\$181,147	\$168,845	\$161,193	\$155,931
Revenues from royalty agreements	6,244	5,184	1,530	720	130
Total revenues	\$202,615	\$186,331	\$170,375	\$161,913	\$156,061
Operating expenses:					
Contract costs	142,722	129,835	116,133	107,898	102,938
Research and development	14,482	13,116	14,204	19,165	16,125
General and administrative	22,541	30,593	28,734	25,978	22,167
Total operating expenses	179,745	173,544	159,071	153,041	141,230
Operating income	22,870	12,787	11,304	8,872	14,831
Interest income (expense), net	223	761	683	315	648
Income before provision for income taxes	23,093	13,548	11,987	9,187	15,479
Provision (benefit) for income taxes	8,564	5,531	5,175	4,860	6,235
Net income	\$14,529	\$8,017	\$6,812	\$4,327	\$9,244
Cash dividends declared per common share	\$0.50	\$0.50	\$0.50	\$0.50	\$0.50
Net income per common share:					
Basic	\$1.13	\$0.64	\$0.56	\$0.37	\$0.81

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Diluted	\$1.11	\$0.63	\$0.55	\$0.36	\$0.79
Number of shares used in calculating net income per common share:					
Basic	12,890	12,475	12,100	11,739	11,400
Diluted	13,146	12,681	12,314	11,994	11,759

Financial Position at End of Fiscal Year:	Year Ended October 31,				
	2009	2008	2007	2006	2005
Working capital	\$87,185	\$82,614	\$75,337	\$67,188	\$63,188
Total assets	171,000	158,019	142,733	136,532	134,621
Long term debt	2,500	3,929	5,357	6,786	8,215
Retained earnings	62,600	54,626	52,953	52,272	53,853
Shareholders' equity	139,025	124,733	114,836	105,630	98,129

Note: The financial results in fiscal year 2009 include the results of Pyxis since its acquisition in September 2009. The financial results in fiscal years 2006 and thereafter include stock-based compensation expense as a result of adopting share-based payment accounting standards.

Item 7: Management's Discussion and Analysis of Financial Condition and Results of Operations

The following discussion contains forward-looking statements that involve risks and uncertainties, as discussed in the introduction to "Item 1: Business." Actual results could differ substantially from those anticipated in these forward-looking statements as a result of many factors, including those set forth under "Item 1A: Risk Factors."

We believe funding of the U.S. defense budget is slowing relative to the prior five-year period as a result of anticipated decreases in supplemental budgets and impacts from financial market stimulus packages. Despite these potential declines in overall defense spending, we believe that interest in intelligence, surveillance, and reconnaissance (ISR) by the United States Government will remain strong to respond to the continuing threat of terrorist activities and irregular warfare campaigns.

As we look ahead, we believe that spending levels in our high-demand niche categories of procurement will remain strong. We are a full-service provider of ISR products, systems, and services, serving the defense, intelligence, and homeland security markets. We believe these core markets have strong growth potential and that we are well positioned to benefit from defense spending in these areas. Since the beginning of fiscal year 2009, we have strengthened our product development pipeline and debuted three new products: a broadband network analysis product for cyber surveillance, a tactical wireless reconnaissance product capable of exploiting modern communication signals, and a towed high definition sonar system for undersea port and harbor surveillance.

We have a firm foundation in broadband communications and anticipate continued strong activity in this core market. Over the next several years, we anticipate growth opportunities in tactical SIGINT and cyber intelligence as the Government recapitalizes its existing equipment with new technology and develops an integrated response to emerging cyber security threats. We continue to focus our operations on delivering strong program performance, meeting staffing requirements, maintaining a competitive cost structure, and expanding our marketplace. Our customers continue to come to us with new requirements for ISR solutions, weighted heavily toward new development efforts. A significant portion of our revenue continues to be generated by cost-reimbursable contracts that tend to be developmental in nature, and require highly specialized, technical skill sets. We believe that this trend will continue through fiscal year 2010.

We implemented a new multi-rate structure in fiscal year 2009 that we believe should have several positive effects on our business. This rate structure has reduced the cost of our product offerings. We believe this allows us to compete for product sales in highly competitive markets where price is a significant factor. We believe that this new structure could also allow us to compete more effectively on system integration efforts and to be more competitive in our emerging professional services business.

Acquisition of Pyxis Engineering. On September 1, 2009, we acquired all of the outstanding membership interests in Pyxis Engineering LLC, a Maryland limited liability company (Pyxis). Pyxis has been engaged in software engineering, system and database administration, systems engineering, information assurance, and project management services for the Department of Defense and Intelligence Community, including cleared system software development, systems architecture, application performance management, web portal development, data management,

and data mining. We believe the Pyxis acquisition will complement our existing software and network services business in the defense and intelligence communities. The acquisition allows us the opportunity to expand our software and network services business into the emerging cyber security market. The amount of goodwill recorded for the Pyxis acquisition at October 31, 2009, was approximately \$13.2 million and reflected the value of the future engineering services revenue opportunities associated with the cyber security marketplace.

As a result of the Pyxis acquisition, we increased the number of our employees by 73.

The preliminary purchase price as of October 31, 2009, was approximately \$16.1 million, plus an estimated \$0.5 million in transaction costs, totaling \$16.6 million. Approximately \$1.6 million that would otherwise be distributed to the sellers at the closing was deposited into an escrow account to provide a fund against which we may make claims for damages, if any, based on breaches of the representations made by Pyxis in the purchase agreement. Fifty percent of the escrow account will be released on the one-year anniversary of the closing date and the remainder in 18 months from the closing date, net of any claims made by us against Pyxis or the sellers under the terms of the purchase agreement.

The sellers are also entitled to additional consideration (the Earn-Out) based upon the performance of the business acquired from Pyxis during the 12-month period ending October 31, 2010 (Earn-Out Period). If total revenue that we generate from the acquired Pyxis contracts plus new contracts in our cyber intelligence business is in excess of \$13.25 million during the Earn-Out Period then we will pay the sellers all of such excess up to a maximum of \$3.75 million for revenues of \$17 million or more. Any payment of the Earn Out to sellers will result in an increase to goodwill. We funded the purchase price from our current investments. The results of operations of the acquisition are included in the accompanying statement of operations since the acquisition date.

The aggregate preliminary purchase price for the acquisition was allocated to the tangible and identifiable intangible assets acquired and liabilities assumed based on their estimated fair values at the date of acquisition. The fair values assigned to the intangible assets acquired totaled approximately \$1.9 million and are based on estimates, assumptions, and other information compiled by management, including independent valuations that utilize established valuation techniques. Intangible assets related to the acquisition, excluding goodwill, are amortized to expense on a straight-line basis over their estimated useful lives ranging from one to seven years.

Critical Accounting Policies and Estimates

General. Our discussion and analysis of our financial condition and results of operations are based upon our consolidated financial statements. These consolidated financial statements are prepared in accordance with accounting principles generally accepted in the United States, which require management to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes. Actual results could differ materially from those estimates. We believe that the estimates, assumptions, and judgments involved in the accounting policies described below have the greatest potential impact on our consolidated financial statements and, therefore, consider these critical accounting policies. See "Notes to Consolidated Financial Statements, Note 1: Summary of Significant Accounting Policies," included elsewhere in this report for more information about these critical accounting policies, as well as descriptions of other significant accounting policies.

Revenues and cost recognition. Our contracts are executed through written contractual arrangements, most of which require us to design, develop, manufacture, and/or modify our complex products, and perform related services according to specifications provided by the customer. The majority of our contracts are accounted for following the authoritative guidance for construction-type and production-type contracts. We recognize revenue on a limited number of standalone software contracts following the guidance for software revenue. For these software contracts, we defer revenue that is related to billings and customer payments in advance of the completion of the performance requirements set forth in these contracts.

As a supplier to the United States Government, we are required to comply with numerous regulations, including those governing security and contracting practices. Failure to comply with these procurement regulations and practices could result in fines being imposed against us or our suspension for a period of time from eligibility for bidding on, or for award of, new Government contracts. Among the causes for the suspension are violations of various statutes, including those related to procurement integrity, export control, United States Government security regulations, employment practices, protection of the environment, accuracy of records in the recording of costs, and foreign corrupt practices. The Government may investigate and make inquiries of our business practices and conduct audits of contract performance and cost accounting. The Government audits and investigations can take several years to complete. Depending on the results of these audits and investigations, the Government may make claims against us or take exception to certain costs we determined to be recoverable. In the period management determines recoverability is not likely, reserves are established for the estimated loss by a charge to operating income.

We account for cost-reimbursement contracts by charging actual labor, materials, and other direct costs, plus estimated indirect costs of operations as incurred, including overhead, R&D, and general and administrative expenses (incurred costs). Stock compensation expense is generally not reimbursable under these contracts. Beginning in the first quarter of fiscal year 2009, we apply indirect costs to all subcontract costs. During fiscal year 2008, we did not apply indirect costs to subcontract costs that were in excess of \$250,000 and that met certain other predetermined criteria.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

We recognize contract revenues and profits on cost-reimbursement contracts by applying an estimated fee rate to all incurred costs on an individual contract basis. Fee calculations are based on either negotiated fee amounts or management's assessment of the fee amounts that are likely to be earned. On cost-reimbursement contracts, we may bear unexpected cost increases for purposes of maintaining customer relationships. Historically, the effect on operating results and financial condition from cost-reimbursement losses has been minimal.

Our policy for recognizing interim award fees on our cost-plus-award-fee contracts is based on management's assessment as to the likelihood that the award fee or an incremental portion thereof will be earned, on a contract-by-contract basis. Management bases its assessments on numerous factors, including contract terms, nature of the work to be performed, our relationship and history with the customer, our history with similar types of projects, and our current and anticipated performance on the specific contract. No award fee is recognized in whole or in part until management determines that it is probable that the award fee or portion thereof will be earned. Historically, management's estimates have generally been consistent with the actual fees awarded. However, changes in facts and circumstances could arise within an award fee period causing management to either lower or raise the award fee estimate in the period in which the changes occur.

Our time-and-materials contracts are performed on a level-of-effort basis. We recognize revenue for these contracts by applying a negotiated billing rate to the level of effort.

We account for fixed-price contracts by using the percentage-of-completion method. Under this method, we charge labor, materials, and other direct costs, plus estimated indirect costs of operations as they are incurred. Each period, we recognize as revenue a portion of the contract revenue, based on estimated profits and the degree of completion of the contract as measured by a comparison of the actual costs incurred and the estimated costs to complete. On fixed-price contracts, we bear the risk of any unexpected increases in the cost to develop or manufacture a product, whether due to inaccurate estimates in the bidding process, unanticipated increases in material costs, inefficiencies, or other factors; and these costs could have a materially adverse effect on our results of operations.

For those contracts in which all of the terms have not yet been finalized, revenue does not include an estimated fee rate on cost.

Management reviews contract performance, costs incurred, and estimated completion costs regularly. We adjust revenues and profits on all contracts in the period in which changes, including anticipated losses, become determinable.

Precontract costs represent costs incurred in anticipation of specific expected future contract awards and costs incurred in connection with ongoing contracts for which contract modifications have not been defined or completed at the end of the reporting period. These costs are included in other current assets on the balance sheet. Precontract costs for the periods ending October 31, 2009, and October 31, 2008, were approximately \$1,139,000 and \$1,283,000, respectively. Approximately \$573,000 of the October 31, 2008, balance was recognized as revenues during fiscal year 2009. During the fourth quarter of fiscal year 2009, we determined that the balance associated with a certain contract would not be recognized in revenues, and therefore decreased precontract costs and operating income by approximately \$539,000.

We have one royalty licensing agreement for which we accrue royalties on sales of our licensed product by a third party. Since there are essentially no costs associated with this agreement, operating income will increase by the same amount of revenue that we recognize. Royalties contributed approximately \$6,244,000, \$5,184,000, and \$1,530,000 to revenues and operating income during fiscal years 2009, 2008, and 2007, respectively.

Indirect rate variance adjustment to operations. We record contract revenues and costs of operations for interim reporting purposes based on annual targeted indirect rates. During our interim reporting periods, variances may accumulate between the actual indirect rates and the annual targeted rates. Timing-related indirect spending variances are removed from contract costs, research and development, and general and administrative expenses, and are included in inventory as part of work in process during these interim reporting periods. These rates are reviewed regularly, and we record adjustments for any material, permanent variances in the period they become estimable. At the beginning of fiscal year 2009, we implemented a new indirect rate structure, which changed the application of certain indirect expenses to contracts. We implemented this new structure in accordance with the Federal Acquisition Regulations. Through this new rate structure, we changed the allocation of certain indirect costs from general and administrative expenses to contract costs. In addition, this structure changed the application of certain general and administrative expenses to contracts, which created a one-time increase to operating income of approximately \$450,000 from fixed-price contracts.

Our accounting policy for recording indirect rate variances is based on management's belief that variances accumulated during interim reporting periods will be absorbed by expected contract activities during the remainder of the year. We consider the rate variance to be unfavorable when our actual indirect rates are greater than our annual targeted rates. In contrast, a favorable rate variance occurs when our actual indirect rates are lower than our annual targeted rates. During interim reporting periods, we record unfavorable rate variances as reductions to operating expenses and increases to work-in-process inventory. Favorable rate variances are recorded as increases to operating expenses and decreases to work-in-process inventory.

If we anticipate that actual contract activities will be different than planned levels, there are alternatives we can utilize to absorb the variance: we can adjust our planned indirect spending during the year, we can modify our billing rates to our customers through the Defense Contract Audit

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Agency in accordance with the Federal Acquisition Regulations, or we can record adjustments to expense based on estimates of future contract activities for the remainder of the fiscal year.

If our rate variance is unfavorable, the modification of our billing rates will likely increase revenue and operating expenses, and decrease the unfavorable indirect rate variance accumulated in inventory. Fee percentages on fixed-price and time-and-materials contracts will generally decline as a result of any increase to indirect costs. Fee percentages on active cost-reimbursable contracts will generally be unaffected as a result of any increase to indirect costs. Fee percentages on completed cost-reimbursable contracts will generally be reduced. If our rate variance is favorable, the modification of our billing rates will typically decrease revenue and operating expenses, and decrease the favorable indirect rate variance accumulated in inventory. In this event, fee percentages on fixed-price and time-and-materials contracts will generally increase. Fee percentages on cost-reimbursable contracts will generally be unaffected as a result of any reduction to indirect costs, due to the fact that programs will typically expend all of the funds available. Any impact on operating income, however, will depend on a number of other factors, including mix of contract types, contract terms, anticipated performance on specific contracts, and anticipated changes in inventory.

At the end of fiscal year 2009, we absorbed a favorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers, which created an insignificant adjustment to revenues and decreased operating expenses by approximately \$329,000.

At the end of fiscal year 2008, we absorbed a favorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers. Consequently, we decreased revenues by approximately \$1,657,000 and operating expenses by approximately \$1,243,000, which represented a reduction to operating income of approximately \$414,000. The reduction to operating income included an increase to general and administrative (G&A) expense of approximately \$1,241,000, primarily associated with inventory purchases related to one product during the fourth quarter.

At the end of fiscal year 2007, we absorbed an unfavorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers, which increased revenues by approximately \$958,000 and operating expenses by approximately \$2,224,000, which represented a reduction to operating income of approximately \$1,266,000. As of the end of the third quarter of fiscal year 2007, we had anticipated a reduction to operating income and recorded a profit reserve of \$1,300,000.

Inventory valuation and disposal. We provide advanced digital signal processing products and systems to the United States Government. Typical life cycles of our products are eight to ten years or more. In addition, we maintain spare parts in order to repair the equipment. We evaluate our inventory quarterly at interim reporting periods, and assess our ability to sell our products, which include raw materials. Historically, we have sold our inventory at or above cost, so there was typically no decrement in valuation. When we determine that a product has reached the end of its life cycle or there is no longer a need for a certain product, typically, we will dispose of any remaining inventory and record the associated reduction to inventory.

We recorded a write-down of approximately \$422,000 during fiscal year 2009 and \$1,329,000 during fiscal year 2008. We recorded these write-downs to reflect the estimated market value of one inventoried product. These charges were included in contract costs in our statement of operations. Disposals associated with our raw material represent a minor amount and are included in general and administrative expenses on the statement of operations, due to the fact that raw materials could be used in a variety of situations other than contract costs, including R&D. Disposals of raw material inventory were not significant during fiscal years 2009 and 2008. During fiscal year 2009, disposals of obsolete products amounted to approximately \$304,000 and \$251,000 during fiscal year 2008.

Income taxes. We estimate our income taxes in each of the taxing jurisdictions in which we operate. Our effective tax rate can differ from the statutory rate primarily due to research and development credits and tax exempt interest, offset by the non-tax-deductible nature of meals and entertainment expense and certain types of stock-based compensation expense. In addition, our process involves estimating our current tax expense together with assessing any temporary differences resulting from the different treatment of certain items, such as the timing for recognizing certain expenses, for tax and accounting purposes. These differences may result in deferred tax assets and liabilities, which are included in our consolidated balance sheet. We are required to assess the likelihood that our deferred tax assets, which include our net operating loss carryforwards and temporary differences that are expected to be deductible in future years, will be recoverable from future taxable income or other tax planning strategies. If recovery is not likely, we have to provide a valuation allowance based on our estimates of future taxable income in the various taxing jurisdictions, and the amount of deferred taxes that are ultimately realizable. The provision for current and deferred taxes involves evaluations and judgments of uncertainties in the interpretation of complex tax regulations by various taxing authorities. Actual results could differ from our estimates.

We also recognize the impact of an uncertain income tax position on the income tax return at the largest amount that is more-likely-than-not to be sustained upon audit by the relevant taxing authority. An uncertain income tax position will not be recognized if it has less than 50% likelihood of being sustained.

We record interest or penalties related to income taxes as a component of income tax expense in our financial statements.

Please refer to "Notes to Consolidated Financial Statements, Note 8: Income Taxes" for further information.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Price redetermination. As a Government contractor, we are subject to price redetermination on certain fixed-price contracts if it is determined that we did not price our products and services consistent with the requirements of the Federal Acquisition Regulations. We did not incur any material price redeterminations on any of our contracts during fiscal years 2009, 2008, and 2007.

Business Combination. In accordance with business combination accounting, we allocated the purchase price of Pyxis to the tangible and intangible assets acquired, and liabilities assumed based on their estimated fair values. We engaged a third-party appraisal firm to assist management in determining the fair values of certain assets acquired and liabilities assumed. The valuation required management to make significant estimates and assumptions, especially with respect to intangible assets.

Management made estimates of fair value based upon assumptions believed to be reasonable. These estimates were based on historical experience and information obtained from the management of Pyxis and are inherently uncertain. Critical estimates in valuing certain of the intangible assets included, but were not limited to, future expected cash flows from funded backlog, unfunded backlog, future contracts, and non-compete agreements. Unanticipated events and circumstances may occur that may affect the accuracy or validity of such assumptions, estimates, or actual results.

Goodwill valuation. We test goodwill for possible impairment on an annual basis in the fourth quarter and at any other time if events occur or circumstances indicate that the current carrying amount of goodwill may not be recoverable. Circumstances that could trigger an impairment test include, but are not limited to, a significant adverse change in the business climate or legal factors, an adverse action or assessment by a regulator, unanticipated competition, and loss of key personnel.

The determination as to whether a write-down of goodwill is necessary involves significant judgment based on the short-term and long-term projections of future performance as well as the estimation of discount rates.

To perform the goodwill impairment test, we determine the fair value of the reporting unit and compare the fair value to the reporting unit's carrying value, as of the first day of the fourth quarter. We believe AST is one reporting unit, and therefore, we compare the fair value of AST to the total net asset value on our balance sheet. If our total net asset value were to exceed our fair value, we would perform the second step of the impairment test. In the second step, we would compare the implied fair value of our goodwill to our carrying amount, taking a write-down to the extent the carrying amount exceeds the implied fair value. If the fair value of AST exceeds the carrying value of our net assets under step one, then no impairment is indicated and the test is complete.

We passed the first step of our annual impairment test for fiscal year 2009. In addition, there were no indicators of impairment as of October 31, 2009.

Long-lived asset valuation (property, plant and equipment, and intangible assets). We will test long-lived assets or asset groups for recoverability when events or changes in circumstances indicate that their carrying amount may not be recoverable. Circumstances that could trigger a review include, but are not limited to: significant decreases in the market price of the asset, significant adverse changes in the business climate or legal considerations, accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of the asset, current period cash flow or operating losses combined with a history of losses or a forecast of continuing losses associated with the use of the asset, and current expectation that the asset will more likely than not be sold or discarded significantly before the end of its estimated useful life.

We assess recoverability based on the carrying amount of the asset and its fair value, which is generally determined based on the sum of the undiscounted cash flows expected to result from the use and the eventual disposal of the asset. We recognize an impairment loss when the carrying amount is not recoverable and exceeds the fair value.

There were no indicators of impairment as of October 31, 2009.

Share-based payment. We adopted the current accounting standard related to share-based payment in fiscal year 2006. We elected to use the modified prospective transition method. Stock-based compensation expense for equity awards granted subsequent to November 1, 2005, was based on the grant-date fair value estimated in accordance with the provisions of the new standard. For awards granted prior to, but not yet vested, as of November 1, 2005, stock-based compensation expense was based on the grant-date fair value previously estimated in accordance with the prior accounting standard. We recognize the stock compensation expense over the requisite service period of the award, which generally equals the vesting period of each grant.

We have an Employee Stock Purchase Plan (ESPP). For offering periods beginning prior to December 1, 2008, the ESPP allowed employees to purchase shares of common stock at 85% of the closing stock price at the lower of either the date of enrollment or the date of purchase. For offering periods beginning prior to June 1, 2007, our ESPP had a twenty-four-month offering period with four six-month purchase periods within each offering period. If the closing stock price on the purchase date was lower than the closing stock price on the offering date, all participants were withdrawn from the offering period and re-enrolled into a new offering period. We modified our ESPP such that the length of all offering periods, beginning June 1, 2007, is six months. In 2008, the Board of Directors increased the purchase price and eliminated the

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

look-back provision for offering periods beginning on or after December 1, 2008. The purchase price for participants is now 95% of the closing stock price on the date of purchase, and therefore, the ESPP is non-compensatory. The remaining expense related to the final compensatory award under the ESPP was recognized in the first quarter of fiscal year 2009.

The following table sets forth the total stock-based compensation expense resulting from the grant of stock options, restricted stock awards, and purchases under the ESPP included in our condensed consolidated statements of operations (in thousands, except share data).

	Year Ended October 31,		
	2009	2008	2007
Contract costs	\$1,397	\$2,747	\$2,388
Research and development	76	177	177
General and administrative	763	1,855	1,585
Stock-based compensation expense before income taxes	\$2,236	\$4,779	\$4,150
Income taxes	(727)	(1,029)	(850)
Stock-based compensation expense after income taxes	\$1,509	\$3,750	\$3,300
Reduction to basic net income per share	\$0.12	\$0.30	\$0.27
Reduction to diluted net income per share	\$0.11	\$0.30	\$0.27

The decrease to our stock-based compensation expense in fiscal year 2009 is primarily due to the non-compensatory nature of our ESPP Plan, effective December 1, 2008. In addition, during the third quarter of fiscal year 2008, all outstanding but unvested stock option and restricted stock awards held by our former Chairman and Chief Executive Officer were vested in full in connection with his severance agreement. We also extended the period of exercisability of his stock options for up to two years from the date of termination of employment. As a result of these modifications, we recognized stock-based compensation expense of approximately \$304,000 during the third quarter of fiscal year 2008.

Please refer to “Notes to Consolidated Financial Statements, Note 1: Organization and Summary of Significant Accounting Policies, Stock-Based Compensation” for additional information.

Fair value measurements. As of November 1, 2008, we adopted the new accounting standard on fair value. The new standard defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. It also establishes a framework for measuring fair value and enhances disclosures about fair value measurements. The adoption of the new standard did not have a material impact on our results of operations, financial position, or cash flows. The requirements of the new standard as they relate to certain non-financial assets and liabilities have been deferred until the first quarter of our fiscal year 2010. We currently do not expect that the adoption of the portion of the standard relating to these non-financial assets and liabilities will have a material impact on our results of operations, financial position, or cash flows. In October 2008, the Financial Accounting Standards Board (FASB) issued additional authoritative guidance, which clarified the application of fair value rules in a market that is not active. In April 2009, the FASB issued guidance on determining fair value when the transaction volume has decreased significantly. The adoption of the additional guidance did not have a material impact on our results of operations, financial position, or cash flows.

The standard on fair value measurement establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. There are three levels of inputs that may be used to measure fair value:

- **Level 1.** Quoted (unadjusted) prices in active markets for identical assets or liabilities
- **Level 2.** Observable inputs other than quoted prices included in Level 1, such as quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable market data
- **Level 3.** Unobservable inputs that are supported by little or no market activity and are significant to the measurement of the fair value of the assets or liabilities

The following table presents information about the Company’s financial assets and liabilities measured at fair value on a recurring basis as of October 31, 2009 (in thousands).

	— Fair Value Measurement Using —		Total Fair Value
	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	
Assets			
Cash equivalents:			
Money market funds	\$2,028	\$—	\$2,028
Available-for-sale securities:			
Short-term municipal	—	43,454	43,454
Long-term municipal	—	2,129	2,129
Total assets	===== \$2,028	===== \$45,583	===== \$47,611
Liabilities			
Interest rate swap	\$—	\$116	\$116
Total liabilities	===== \$—	===== \$116	===== \$116

As of October 31, 2009, our investment portfolio did not include investments in assets using Level 3 inputs, and we do not intend to purchase such investments in future periods.

Our money market funds are priced by using unadjusted prices in active markets for identical assets.

We determine the fair values of our municipal securities by using pricing models with inputs that are observable in the market or can be derived principally from or corroborated by observable market data.

The inputs used to value the interest rate swap are based on observable market data such as the London Inter-Bank Offered Rate (LIBOR) swap rate (floating interest rate), a fixed rate (term loan interest rate), a discount factor, and a calculation of a present value of the interest paid/received based on the expected loan principal. Please refer to “Notes to Consolidated Financial Statements, Note 6: Borrowing Arrangements” for further information.

As of November 1, 2008, we also adopted a new accounting standard that allows an entity to choose to measure certain financial instruments and liabilities at fair value on a contract-by-contract basis. Subsequent fair value measurement for the financial instruments and liabilities an entity chooses to measure will be recognized in earnings. As of October 31, 2009, we did not elect such option for any of our financial instruments or liabilities.

Allowance for bad debt. Since the majority of our revenues are generated from the United States Government, its agencies, or prime contractors for the United States Government, we regard the credit risk of our business to be minimal. We record allowances for bad debt as a reduction to accounts receivable and an increase to bad debt expense. These allowances are recorded in the period a specific collection problem is identified. Once the receivable is deemed uncollectible, the allowance is reversed and the receivable is written off. Charges to bad debt expense were not significant during fiscal years 2009, 2008, and 2007.

Operating Results – Fiscal Years Comparison

The following table sets forth, for the periods indicated, statements of operations data as a percentage of revenues from contracts, and, at the end of each period indicated, our backlog.

~~—~~ Year Ended October 31, ~~—~~

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

	2009	2008	2007
Revenues	100.0%	100.0%	100.0%
Operating expenses:			
Contract costs	70.4%	69.7%	68.2%
Research and development	7.2%	7.0%	8.3%
General and administrative	11.1%	16.4%	16.9%
Total operating expenses	88.7%	93.1%	93.4%
Operating income	11.3%	6.9%	6.6%
Interest income (expense), net	0.1%	0.4%	0.4%
Income before provision (benefit) for income taxes	11.4%	7.3%	7.0%
Provision (benefit) for income taxes	4.2%	3.0%	3.0%
Net income	7.2%	4.3%	4.0%
Backlog (thousands of dollars)	\$139,108	\$124,784	\$126,708

Revenues

Revenues were approximately \$202,615,000, \$186,331,000, and \$170,375,000 for fiscal years 2009, 2008, and 2007, respectively. Revenues increased by 8.7% during fiscal year 2009 over fiscal year 2008 and increased by 9.4% during fiscal year 2008 over fiscal year 2007.

Revenues generated by our development programs increased by approximately \$3,735,000 in fiscal year 2009 compared to the same period in fiscal year 2008. This increase included revenues generated from Pyxis of approximately \$2,246,000. Revenues from development programs increased by approximately \$17,170,000 during fiscal year 2008 compared to the same period in fiscal year 2007. This increase included revenues recognized from pre-contract costs of approximately \$4,113,000 incurred during fiscal year 2007.

Product sales increased by approximately \$11,488,000 during fiscal year 2009 compared to the same period in fiscal year 2008. During fiscal year 2008, our product sales declined by approximately \$4,868,000 compared to fiscal year 2007.

We have one royalty agreement for which we accrue royalties on sales of our licensed product by a third party. Since there are essentially no costs associated with this agreement, operating income will increase by the same amount of revenue that we recognize. Revenues from royalties increased by approximately \$1,060,000 during fiscal year 2009 over fiscal year 2008, and increased by approximately \$3,654,000 during fiscal year 2008 over fiscal year 2007.

The following table represents our revenue concentration (as a percentage of total revenues) during the respective periods by revenue type.

	FY09	FY08	FY07
Development revenues	83%	88%	86%
Product revenues	14%	9%	13%
Royalty revenues	3%	3%	1%
	100%	100%	100%

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Our contracts can be either fixed-price contracts, where we agree to deliver equipment for a fixed price and assume the risk of cost overruns; cost-reimbursement contracts, where we are reimbursed for our direct and indirect costs and paid a negotiated profit; or time-and-materials contracts, where we recognize revenue for these contracts by applying a negotiated billing rate to the level of effort. Cost-reimbursement and time-and-materials contracts typically do not return as high a profit margin as fixed-price contracts, and accordingly, our profit margin will be affected by the mix of our orders by contract type. The following table represents our revenue concentration (as a percentage of total revenues) during the respective periods by contract type.

	FY09	FY08	FY07
Cost-reimbursement contracts	59%	69%	71%
Time-and-materials contracts	22%	18%	14%
Fixed-price contracts	16%	10%	14%
Royalty contracts	3%	3%	1%
	-----	-----	-----
	100%	100%	100%
	=====	=====	=====

The following table represents the revenue concentration of our significant contracts during the respective periods. Due to security requirements of the United States Government, we are unable to disclose the actual contract names. Therefore, for the ease of the reader, we have renamed these contracts for reporting purposes in the table below.

	FY09	FY08	FY07
Tiffany	21%	13%	15%
ASA	18%	15%	9%
High Beam	7%	15%	—
Stone Face II	6%	12%	12%
Specter	—	5%	14%
	-----	-----	-----
	52%	60%	50%
	=====	=====	=====

a dash (—) designates less than 5% revenue concentration

The following contracts were indefinite-delivery-indefinite-quantity (IDIQ) contracts: ASA, Tiffany, and Stone Face II. Under the terms of this type of contract, the Government may issue individual delivery orders (DOs) for goods or services that they require. Each DO is treated as a separate contract, which may be awarded on a cost-reimbursable, fixed-price, or time-and-materials basis. We aggregate the DOs under each IDIQ contract for purposes of distinguishing significant revenue concentrations.

ASA is a time-and-materials contract. All of the other contracts referenced above were cost-reimbursement contracts.

The following table identifies the source of our revenues (as a percentage of total revenues) for fiscal years 2009, 2008, and 2007 by market.

	FY09	FY08	FY07
Intelligence	83%	80%	78%
Defense	12%	16%	20%
Commercial	5%	4%	2%
Foreign	—	—	—
	-----	-----	-----
	100%	100%	100%
	=====	=====	=====

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

a dash (—) designates less than 1% revenue concentration

Within the customer types, contracts with two intelligence community customers and one defense customer represented a significant portion of revenues.

The table below identifies the revenue concentration (as a percentage of total revenues) from all contracts with each significant customer.

	FY09	FY08	FY07
Intelligence community customer 1	33%	25%	26%
Intelligence community customer 2	43%	50%	47%
Largest defense customer	9%	12%	15%
	-----	-----	-----
	85%	87%	88%
	=====	=====	=====

Revenues from the United States Government can also be categorized as direct purchases and subcontracts, where we are the supplier to another contractor. The following table distinguishes revenue (as a percentage of total revenues) between those two categories.

	FY09	FY08	FY07
Direct purchases	65%	65%	69%
Subcontracts	30%	31%	29%
	-----	-----	-----
	95%	96%	98%
	=====	=====	=====

New Orders and Backlog

We received new orders of approximately \$210,285,000, \$185,139,000, and \$191,193,000 during fiscal years 2009, 2008, and 2007, respectively. During fiscal year 2008, we received a termination for the convenience of the Government related to several delivery orders under the Stone Face II IDIQ contract. During fiscal year 2009, we reduced backlog by approximately \$3.7 million as a result of the negotiation of a portion of these terminated efforts. We anticipate the remaining balance of approximately \$0.9 million will be negotiated in future periods. Our backlog consists of the uncompleted portions of existing contracts (excluding unexercised contract options). At the end of fiscal year 2009, ending backlog was approximately \$139,108,000. Reported backlog includes both funded and unfunded portions of contract values. There is no assurance or obligation that contracts will be fully funded. To the extent that contracts are not fully funded, there will be a reduction to backlog in a future period. The fiscal year 2009 backlog represents a 11.5% increase to the backlog of \$124,784,000 at the end of fiscal year 2008, primarily due to the backlog acquired from Pyxis of \$8,648,000. The fiscal year 2008 backlog represents a 1.5% decrease to fiscal year 2007.

Contract Costs

Contract costs consist of direct costs incurred in the performance of contracts, including labor, materials, and overhead costs. Contract costs were approximately \$142,722,000, or 70.4% of revenues, in fiscal year 2009 compared to approximately \$129,835,000, or 69.7% of revenues, in fiscal year 2008, and approximately \$116,133,000, or 68.2% of revenues, in fiscal year 2007. Contract costs increased in absolute dollars due to the increase in revenues, but remained constant as a percentage of revenues during fiscal year 2009 compared to fiscal year 2008. The increase in costs was due to contract activity related to our development contracts, offset by reductions to contract costs from pre-contract activity of approximately \$2,356,000, inventory write-downs of approximately \$907,000, and stock based compensation expense of approximately \$1,350,000. Contract costs increased in absolute dollars during fiscal year 2008, primarily due to increased contract activity related to our development contracts, our ability to recognize pre-contract costs incurred during fiscal year 2007, and an inventory write-down of approximately \$1,329,000.

Research and Development Expenses

Company-directed investment in research and development were approximately \$14,482,000, or 7.1% of revenues, in fiscal year 2009 compared to approximately \$13,116,000, or 7.0% of revenues, in fiscal year 2008 and approximately \$14,204,000, or 8.3% of revenues, in fiscal year 2007. R&D expenses increased in absolute dollars but remained consistent with fiscal year 2008 as a percentage of revenues. R&D expenses decreased in fiscal year 2008 compared to fiscal year 2007 primarily due to directing our efforts toward meeting our contractual obligations.

General and Administrative Expenses

General and administrative (G&A) expenses include administrative salaries, costs related to marketing and proposal activities, costs related to product warranties, and other administrative costs. General and administrative expenses were approximately \$22,541,000, or 11.1% of revenues, in fiscal year 2009 compared to approximately \$30,593,000, or 16.4% of revenues, in fiscal year 2008 and approximately \$28,734,000, or 16.9% of revenues, in fiscal year 2007. G&A expenses decreased in absolute dollars and as a percentage of revenue during fiscal year 2009, primarily due to the change in our indirect rate structure for fiscal year 2009. In addition, stock-based compensation declined by approximately \$1,092,000 during fiscal year 2009, compared to fiscal year 2008. G&A expenses were higher in absolute dollars during fiscal year 2008 compared to fiscal year 2007 primarily due to severance costs of approximately \$1,180,000 associated with the termination of our former Chief Executive Officer and an increased allocation of G&A expenses associated with inventory purchases related to one class of products of approximately \$1,337,000. These increases were partially offset by a decrease to bid and proposal expenditures of approximately \$1,519,000.

Interest Income and Other, Net

Interest income and other, net for fiscal year 2009, was approximately \$676,000 compared to approximately \$1,296,000 and \$1,356,000 of interest income in fiscal years 2008 and 2007, respectively. Interest income decreased during fiscal year 2009 and during fiscal year 2008 primarily due to lower average yields within our investment portfolio. In addition, we used cash to acquire Pyxis Engineering, LLC. Please refer to "Notes to Consolidated Financial Statement Note 4: Business Combination" for further information.

Interest Expense

Interest expense for fiscal year 2009 was approximately \$453,000 compared to approximately \$535,000 and \$673,000 in fiscal years 2008 and 2007, respectively. Interest expense has declined in fiscal years 2009 and 2008 due to the reduction to our Term Loan with Wells Fargo through scheduled principal payments.

Provision for Income Taxes

Our provision for income taxes for fiscal years 2009, 2008, and 2007 resulted in income tax expense of approximately \$8,564,000, \$5,531,000, and \$5,175,000, respectively. The effective tax rate for fiscal years 2009, 2008, and 2007 were approximately 37%, 41%, and 43%, respectively. The decline in our tax rate in fiscal year 2009, compared to fiscal year 2008 is primarily due to a reduction in non-deductible stock compensation expense from our ESPP related to changes in the plan and a decline in non-deductible meals and entertainment expense. In addition, the reduction of our liability for unrecognized tax benefits as a result of a favorable IRS audit created a reduction to income tax expense of approximately \$245,000.

The decline in our tax rate in fiscal year 2008, compared to fiscal year 2007 is primarily due to a combination of discrete events associated with a change in our method of calculating the depreciation of fixed assets for tax purposes and R&D credits.

During fiscal year 2009 and in the fourth quarter of fiscal year 2008, we recorded additional R&D credits due to the enactment of the Emergency Economic Stabilization Act of 2008, which extended the Federal Research & Development Tax Credit from December 31, 2007, through December 31, 2009.

Analysis of Liquidity and Capital Resources

Our primary sources of liquidity during fiscal year 2009 were cash flows generated from operations, the issuance of common stock through stock purchases under our ESPP, and the exercise of options granted under our employee stock option plans. We have reduced option grants in favor of restricted stock awards and have modified our ESPP. As a result of the modification to our ESPP, participation has significantly declined. Cash received from the issuance of common stock under our ESPP in fiscal year 2009 declined by approximately \$1,058,000 as compared to fiscal year 2008, and may continue to decline in 2010.

Cash from operating activities. Net cash from operating activities has fluctuated significantly from year to year. Net cash provided by operating activities was approximately \$17,169,000, \$28,163,000, and \$14,155,000 in fiscal years 2009, 2008, and 2007, respectively. The year-to-year variances are primarily the result of changes in net income and operating assets and liabilities.

Net income for fiscal year 2009 was approximately \$14,529,000, a \$6,512,000 increase from fiscal year 2008. Net income for fiscal year 2008 was approximately \$8,017,000, an increase of \$1,205,000 from fiscal year 2007.

Accounts receivable balances increased by approximately \$2,914,000 during fiscal year 2009, decreased by approximately \$4,361,000 during fiscal year 2008, and increased by approximately \$3,897,000 during fiscal year 2007. During fiscal year 2009, we generated revenues of approximately \$196,371,000 and collected approximately \$196,888,000. During fiscal year 2008, we generated revenues of approximately

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

\$186,331,000 and collected approximately \$191,443,000. In fiscal year 2007, we generated revenues of approximately \$170,375,000 and collected approximately \$166,478,000.

Inventories, prepaid expenses, and other assets decreased by approximately \$482,000 in fiscal year 2009, increased by approximately \$2,697,000 and decreased by approximately \$2,680,000 in fiscal years 2008 and 2007, respectively. During fiscal year 2009, deferred tax assets decreased by approximately \$1,539,000. The decrease is primarily associated with adjustments related to our unrecognized tax benefits. In addition, our pre-contract cost decreased by approximately \$143,000. This decrease included a reduction associated with costs incurred during fiscal year 2008 of approximately \$1,073,000. The decline was primarily offset by an increase to pre-contract costs from Pyxis efforts of approximately \$582,000.

During fiscal year 2009, inventory balances increased by approximately \$237,000 due to an aggregate increase to our work-in-process and finished goods balance of approximately \$691,000 partially offset by a reduction due to an inventory write-down of approximately \$422,000. In addition, prepaid income taxes increased by approximately \$576,000.

During fiscal year 2008, inventory balances increased by approximately \$2,196,000. The increase in inventory included an increase to work-in-process inventory by approximately \$3,642,000, primarily associated with two products, and a reduction due to an inventory write-down of approximately \$1,329,000. Current deferred tax assets increased by approximately \$3,643,000 primarily due to an increase of approximately \$1,125,000 associated with unrecognized tax benefits recorded during fiscal year 2008, and a reclassification from long-term deferred tax assets of approximately \$1,025,000 associated with our net operating loss carryforward. Our pre-contract costs decreased by approximately \$3,182,000 primarily due to our ability to obtain funding for the ASA and Simple Edge contracts.

The decrease during fiscal year 2007 is primarily due to a decrease of prepaid income taxes of approximately \$1,690,000 and a decrease in pre-contract costs of approximately \$1,202,000.

Accounts payable, taxes payable, accrued payroll liabilities, and other accrued liabilities balances decreased by approximately \$3,141,000 in fiscal year 2009, increased in fiscal year 2008 by approximately \$5,454,000, and decreased in fiscal year 2007 by approximately \$1,565,000. Accounts payable increased during fiscal year 2009 by approximately \$730,000 due to normal timing of vendor payments. Other accrued liabilities decreased by approximately \$1,460,000 primarily due to reductions to our liabilities for unrecognized tax benefits of approximately \$1,403,000. Accrued payroll liabilities declined by approximately \$2,357,000 primarily due to payments for accrued vacation of approximately \$2,365,000 due to a change in our vacation policy; bonus payments of approximately \$2,751,000, accrued at the end of fiscal year 2008; and payments of payroll liabilities acquired from Pyxis of approximately \$1,225,000 related to the tax withholding of the Pyxis stock compensation awarded prior to the closing of the acquisition. This decline was partially offset by an increase to accrued bonus of approximately \$4,326,000 for our fiscal year 2009 bonus plans.

The increase during fiscal year 2008 included accrued severance for our former Chief Executive Officer of approximately \$1,003,000. Accounts payable increased by approximately \$1,839,000 due to the timing of our vendor payments. Other accrued liabilities increased by approximately \$1,956,000 primarily due to recording unrecognized tax benefits and related interest of approximately \$1,620,000.

During fiscal year 2007, accounts payable balances decreased by approximately \$1,405,000 and accrued payroll liabilities decreased approximately \$709,000.

Cash from investing activities. Net cash used in investing activities during fiscal years 2009, 2008, and 2007 was approximately \$13,269,000, \$24,829,000, and \$9,985,000, respectively.

During the fourth quarter of fiscal year 2009, we paid approximately \$17,325,000 related to the acquisition of Pyxis. We acquired cash of approximately \$1,382,000 from Pyxis.

During fiscal year 2009, we purchased approximately \$63,687,000 of investment securities, while \$71,776,000 matured. Fiscal year 2009 property and equipment purchases included approximately \$2,273,000 in computer equipment and approximately \$1,098,000 in test equipment.

During fiscal years 2008 and 2007, we increased our investment in tax-exempt securities that were classified as short-term or long-term investments. Fiscal year 2008 property and equipment purchases included approximately \$1,339,000 in computer equipment and approximately \$1,247,000 in test equipment. Fiscal year 2007 property and equipment purchases included leasehold improvement efforts of approximately \$1,901,000 associated with our new facilities in Torrance, California, approximately \$1,456,000 in computer equipment, and approximately \$515,000 in test equipment.

Cash from financing activities. Net cash used in financing activities during fiscal years 2009, 2008, and 2007 were approximately \$4,466,000, \$3,916,000, and \$3,114,000, respectively.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

The sources of cash from financing activities for fiscal years 2009, 2008, and 2007 were from the purchase of common stock under our ESPP and the cash received from stock option exercises. During fiscal year 2009, cash from purchase under our ESPP declined by approximately \$1,058,000 as compared to fiscal year 2008 due to less participation in our ESPP. This decline was offset by an increase in cash from option exercises of approximately \$1,009,000 due to the increase of our stock price. During fiscal years 2009, 2008, and 2007, loan payments totaled approximately \$2,054,000, \$1,428,000, and \$1,429,000, respectively. During the fourth quarter of fiscal year 2009, we paid the balance of the loan acquired from Pyxis of approximately \$625,000.

Dividend payments in fiscal year 2009 were the same as for fiscal years 2008 and 2007, at \$0.50 per share per annum. Dividend payments were approximately \$6,507,000, \$6,290,000, and \$6,074,000 in fiscal years 2009, 2008, and 2007, respectively. The year-over-year increases are due to increases in common stock outstanding resulting from activities associated with our stock compensation plans.

Cash is generated primarily from operating activities, employee stock activities, and investing activities. At October 31, 2009, we held in our investment portfolio approximately \$45,583,000 of short-term and long-term municipal securities. Substantially all of our investments in the municipal securities are with AA/AAA/SP-1 (Standard & Poor's), Aa/Aaa/MIG-1 (Moody's), and AA/AAA/F-1 (Fitch) rated issuers.

Our investment policy prohibits our investment in auction rate securities, mortgage-backed securities, and asset-backed securities. Insured municipal notes or bonds are also prohibited, with the exception of daily and weekly variable rate demand notes that contain a hard put feature.

Based on our ability to liquidate our investment portfolio and our expected operating cash flows, we do not anticipate any liquidity constraints as a result of the current credit environment.

We believe the primary risk to liquidity is the potential decrease in demand for our products and services. Historically, this demand has been influenced by the ISR needs of the United States Government.

We believe that the funds generated from operations, existing working capital, and the amount available under our existing line of credit will be sufficient to meet our cash needs for the next twelve months.

Borrowing Arrangements

Revolving line of credit. At October 31, 2009, we had a revolving line of credit (Line of Credit) under which Wells Fargo Bank (Wells Fargo) could advance funds to us, up to a maximum principal amount of \$3 million. The Line of Credit will expire on March 1, 2010.

At October 31, 2009, we had three standby letters of credit under the Line of Credit totaling approximately \$1,407,000. One letter of credit, related to our Sunnyvale, California, facilities lease, had a committed balance of approximately \$1,221,000 at October 31, 2009. The second letter of credit was a requirement of our workers compensation insurance, and had a committed balance of approximately \$150,000 at October 31, 2009. The third letter of credit, a requirement of one of our customers, had a committed balance of \$36,000. We do not pay interest on the amounts associated with the standby letters of credit.

As a result of the committed but unused funds associated with the three letters of credit, the total amount under the Line of Credit available for borrowing was approximately \$1,593,000. No fees or interest were associated with this unused portion. Borrowings under the Line of Credit bear interest at Wells Fargo's reference rate (3.25% at October 31, 2009), and interest on those borrowings is payable monthly. As security for our indebtedness under the Line of Credit, we have granted to Wells Fargo a security interest in our cash and marketable securities maintained with an affiliate of Wells Fargo.

Term loan and interest rate swap. Effective July 1, 2005, and in connection with the acquisition of Dynamics Technology, Inc. (DTI), we entered into a term loan with Wells Fargo, in the principal amount of \$10 million, plus interest, the proceeds of which were used for acquisition financing (Term Loan). The Term Loan bears interest at a rate per annum equal to 1.750% above the London Inter-Bank Offered Rate (LIBOR) (0.24% at October 31, 2009). Our Term Loan is for a seven-year term ending on July 1, 2012. The loan terms require us to make monthly payments of principal and interest.

As security for our indebtedness under the Term Loan, we have granted to Wells Fargo a security interest in our accounts receivable, general intangibles, inventory, and equipment.

We are required to maintain certain financial covenants setting forth minimum ratios for quick ratio and fixed charge coverage and maximum ratios for total liabilities to tangible net worth. As of October 31, 2009, we were in compliance with these covenants.

We are exposed to market risk from changes in interest rates on the Term Loan, and manage this exposure by using an interest rate swap agreement with Wells Fargo. By locking in a fixed rate for the entire term of the loan, this strategy decreases the variability of earnings and cash flows resulting from interest rate fluctuations and lowers the overall borrowing costs should interest rates rise. The interest rate swap is

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

accounted for under the authoritative guidance for derivative instruments, and it is designated as a cash flow hedge. We do not anticipate losses on the agreement due to counterparty credit issues. Under this swap, we pay a fixed interest rate of 4.33% over the seven-year term of the loan and receive an average floating rate of LIBOR on the notional amount of the loan. The combined interest amounts on the Term Loan and the swap reflect our total monthly interest obligation, which is fixed at 6.08%.

The effective portion of the cash flow hedge is reported as other comprehensive income and reclassified into earnings in the same period during which the hedged transaction affects earnings. At October 31, 2009, the effective portion of the cash flow hedge was a deferred loss of approximately \$188,000 on a gross basis. The deferred loss net of taxes was approximately \$116,000, and was included in other comprehensive income and long-term liabilities on our balance sheet. For the years 2009, 2008, and 2007, we recognized losses related to the hedge of \$210,000, \$232,000, and \$7,000, respectively, in other comprehensive income. During fiscal years 2009 and 2008, we recognized interest expense of approximately \$168,000 and \$58,000, respectively, reclassified from other comprehensive income. During fiscal year 2007, we recognized interest income of approximately \$83,000, reclassified from other comprehensive income. Over the next twelve months, we expect to reclassify approximately \$130,000 of the loss to interest expense as principal on the Term Loan is repaid and the related swap-instrument notional amount is reduced.

We assess effectiveness of the hedge instrument regularly. The ineffective portion of the gain or loss, if there is one, would impact earnings as it occurs. There is no ineffective portion of the outstanding swap as of October 31, 2009.

Contractual Obligations

The following table sets forth our contractual obligations as of October 31, 2009 (in thousands).

Fiscal Year	Total	Payments due by period			
		Less than 1 year	1–3 years	3–5 years	More than 5 years
Operating lease obligations	\$32,261	\$7,593	\$12,629	\$7,650	\$4,389
Loan obligations – principal	3,929	1,429	2,500	—	—
Loan obligations – interest	322	194	128	—	—
Purchase obligations	8,447	8,447	—	—	—
Total	\$44,959	\$17,663	\$15,257	\$7,650	\$4,389

Our operating lease obligations consist of non-cancelable lease agreements for our facilities, which expire at various dates between fiscal years 2010 and 2016. Certain leases contain escalation clauses and requirements for the payment of property taxes, insurance, and maintenance expenses.

We do not have any off-balance sheet arrangements with unconsolidated entities or related parties, and, accordingly, our liquidity and capital resources are not subject to off-balance sheet risks from unconsolidated entities.

Product warranties. Our products are warranted against defective workmanship and materials for a period of one year from the date of acceptance by the original purchaser. Warranty costs were approximately \$117,000, \$181,000, and \$306,000 for fiscal years 2009, 2008, and 2007, respectively.

Recent Accounting Pronouncements

In June 2009, the FASB issued Accounting Standards Update No. 2009-01, “*Generally Accepted Accounting Principles*” (ASC Topic 105), which establishes the Accounting Standards Codification (the Codification or ASC) as the single source of authoritative nongovernmental U.S. GAAP, effective July 1, 2009. The Codification supersedes existing FASB, American Institute of Certified Public Accountants (AICPA), Emerging Issues Task Force (EITF), and related literature. The Codification establishes one level of authoritative GAAP. All other literature is considered non-authoritative. The Codification was effective for the financial statements for our fiscal year ending October 31, 2009. The adoption of this statement had no impact on our financial position, results of operations or cash flows.

In December 2007, the FASB issued a revised standard, *Business Combinations*, (ASC Topic 805). The revised standard retains the purchase method of accounting for acquisitions, but requires a number of changes, including changes in the way assets and liabilities are recognized in the purchase accounting. It changes the recognition of assets acquired and liabilities assumed arising from contingencies, requires the capitalization

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

of in-process research and development at fair value, and requires the expensing of acquisition-related costs as incurred. In April 2009, the FASB amended the standard to clarify the accounting for assets and liabilities arising from contingencies in business combinations. The standard, as amended, will apply prospectively to business combinations occurring in our fiscal year beginning November 1, 2009. The effects on future periods will depend on the nature and significance of business combinations subject to the new rules.

In March 2008, the FASB issued a new standard, *Disclosures about Derivative Instruments and Hedging Activities*, which amends the disclosure requirements in ASC Topic 815-10-50. This standard requires enhanced disclosures about derivatives on a quarterly basis, including qualitative disclosures about objectives and strategies for using derivatives, and quantitative disclosures about the fair value of derivatives, as well as gains and losses on derivative instruments. It also requires disclosures about the volume of derivative activity and credit-risk-related contingent features in derivative agreements. We adopted this standard in the second quarter of fiscal year 2009. The adoption did not affect our financial position, results of operations or cash flows due to the disclosure-only nature of the statement.

In June 2008, the FASB issued guidance on determining whether instruments granted in share-based payment transactions are participating securities. This guidance, included in ASC Topic 260-10-45, affects the calculation of earnings per share when a company has unvested share-based payment awards with non-forfeitable rights to dividends. The two-class method of calculation would be required, which means that dividends and undistributed earnings must be allocated between common shares and the unvested awards in calculating Basic EPS. This guidance will be effective for our fiscal year beginning November 1, 2009. We expect that adoption of this guidance may reduce our Basic and Diluted EPS by \$.01.

In April 2009, the FASB amended the guidance on recognition of other-than-temporary impairments of debt securities, included in ASC Topic 320-10-35. The amendment establishes a new method of recognizing and reporting other-than-temporary impairments of debt securities and requires additional disclosures. We adopted this guidance in the third quarter of fiscal year 2009. The adoption did not affect our financial position, results of operations, or cash flows.

In May 2009, the FASB issued a standard on accounting for and reporting on subsequent events (ASC Topic 855). This standard sets forth: 1) the period after the balance sheet date during which management of a reporting entity should evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements, 2) the circumstances under which an entity should recognize events or transactions occurring after the balance sheet date in its financial statements, and 3) the disclosures that an entity should make about events or transactions that occurred after the balance sheet date. We began applying the new standard in the third quarter of 2009 and its adoption did not affect our financial statements, other than the additional disclosures required, which can be found in "Notes to Consolidated Financial Statements, Note 1: Organization and Summary of Significant Accounting Policies."

In October 2009, the FASB issued ASC Update No. 2009-13, updating ASC Topic 605, *Revenue Recognition*. This update provides new standards for revenue recognition for arrangements with multiple deliverables. These new standards affect the determination of when the individual deliverables may be treated as separate units of accounting. Additionally, these new standards modify the method of allocating consideration to the deliverables. The relative fair value method based on selling prices will be required and the residual method of allocating arrangement consideration will no longer be permitted. These new standards are effective for our fiscal year beginning November 1, 2010; however, early adoption is permitted. We are currently evaluating the potential impact, if any, on our financial position, results of operations, or cash flows as a result of adopting these new standards.

In October 2009, the FASB issued ASC Update No. 2009-14, updating ASC Topic 985, *Software*. This update provides new standards that amend the scope of previous software revenue guidance by excluding non-software components of tangible products and certain software components of tangible products. These new standards are effective for our fiscal year beginning November 1, 2010; however, early adoption is permitted. We are currently evaluating the potential impact, if any, on our financial position, results of operations, or cash flows as a result of adopting these new standards.

Quarterly Results

The following table sets forth certain unaudited quarterly consolidated financial data for the eight quarters ending October 31, 2009. In the opinion of management, the unaudited information set forth below has been prepared on the same basis as the audited information and includes all adjustments necessary to present fairly the information set forth herein. The operating results for any quarter are not indicative of results for any future period. All data is in thousands except for common share and per common share data.

	2008									
	Q1	Q2	Q3	Q4	Total	Q1	Q2	Q3	Q4	Total
Revenues from contracts	\$41,610	\$43,888	\$48,695	\$46,955	\$181,147	\$43,687	\$51,618	\$47,845	\$53,221	\$196,371

Number of shares used in calculating net income per common share										
Basic	12,344	12,400	12,538	12,622	12,475	12,754	12,852	12,947	13,005	12,890
Diluted	12,517	12,523	12,741	12,844	12,681	12,973	13,086	13,226	13,268	13,146

At times, we have experienced fluctuations in our quarterly results. Management believes that these fluctuations are an inherent part of the business and could continue into the future. These have included costs associated with uneven flows of incoming material, the level of R&D spending during any given quarter, the use of target indirect rates at interim reporting periods, fee recognition on development contracts in the early phases of contract performance where the financial risk is not entirely known until the contract is further along in the development cycle, the United States Government contracting and budget cycles, the timing of contract awards, and changes in estimates that impact our effective tax rate.

Item 7A: Quantitative and Qualitative Disclosures about Market Risk

Interest rate risk. Our interest income is sensitive to changes in the general level of United States interest rates. At October 31, 2009, our short-term and long-term securities consisted of municipal securities. Substantially all of our investments in the municipal securities are with AA/AAA/SP-1/ (Standard & Poor's), Aa/Aaa/MIG-1 (Moody's), and AA/AAA /F-1 (Fitch) rated issuers. Our investment policy prohibits our investment in auction rate securities, mortgage-backed securities, and asset-backed securities. Insured municipal notes or bonds are also prohibited, with the exception of daily and weekly variable rate demand notes that contain a hard put feature.

The average days to maturity of our investment portfolio is 102 days, as of October 31, 2009. Due to the short-term nature of these cash investments and the ability to liquidate our investment portfolio, we do not believe that there is a material interest rate risk associated with the current credit environment.

As of October 31, 2009, our total cash and investments balance that was sensitive to interest rate risk was approximately \$47,611,000. As a measurement of the sensitivity of our portfolio, if yields were to fluctuate by 100 basis points, the total effect to the investment portfolio balance would be approximately \$131,000.

The following table summarizes our cash equivalents, and short-term securities, at fair value, that are sensitive to interest rate risk (in thousands).

	2009	2008
Cash equivalents	\$2,028	\$2,068
Available-for-sale securities:		
Short-term municipals	43,454	45,045
Long-term municipals	2,129	9,381
	-----	-----
	\$47,611	\$56,494
	=====	=====

Term loan and interest rate swap. Effective July 1, 2005, and in connection with the acquisition of DTI, we entered into a Term Loan agreement in the original principal amount of \$10 million with Wells Fargo, the proceeds of which were used for acquisition financing. At October 31, 2009, the remaining unpaid balance of the Term Loan was \$3,929,000. The Term Loan bears interest at an annual rate of 1.75% above LIBOR (0.24% at October 31, 2009).

We manage potential market risk from changes in interest rates on the Term Loan through the use of an interest rate swap agreement designated as a cash flow hedge. By locking in a fixed rate for the entire term of the loan, this strategy decreases the variability of earnings and cash flows resulting from interest rate fluctuations and lowers our overall borrowing costs should interest rates rise.

Coincident with the Term Loan transaction, we also entered into an interest rate swap agreement with Wells Fargo whereby we pay interest to Wells Fargo at a fixed rate of 4.33% and Wells Fargo pays interest to us at a floating rate tied to the LIBOR index. The combined interest amounts on the Term Loan and the swap reflect our total monthly interest obligation, which is locked in at 6.08%.

Item 8: Consolidated Financial Statements and Supplementary Data**Report of Independent Registered Public Accounting Firm**

The Board of Directors and Shareholders of
Applied Signal Technology, Inc.

We have audited the accompanying consolidated balance sheets of Applied Signal Technology, Inc. as of October 31, 2009, and 2008, and the related consolidated statements of operations, shareholders' equity, and cash flows for each of the three years in the period ended October 31, 2009. These financial statements are the responsibility of Applied Signal Technology, Inc.'s management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Applied Signal Technology, Inc. at October 31, 2009, and 2008, and the consolidated results of its operations and its cash flows for each of the three years in the period ended October 31, 2009, in conformity with U.S. generally accepted accounting principles.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Applied Signal Technology, Inc.'s internal control over financial reporting as of October 31, 2009, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated January 12, 2010, expressed an unqualified opinion thereon.

/s/ Ernst & Young LLP

San Jose, California
January 12, 2010

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders of
Applied Signal Technology, Inc.

We have audited Applied Signal Technology, Inc.'s internal control over financial reporting as of October 31, 2009, based on criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (the COSO criteria). Applied Signal Technology, Inc.'s management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Report on Internal Control over Financial Reporting in Item 9A. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

As indicated in the accompanying Management's Report on Internal Control over Financial Reporting, management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of Pyxis Engineering LLC, which is included in the 2009 consolidated financial statements of Applied Signal Technology, Inc. and constituted \$3.7 million and \$1.9 million of total and net assets, respectively, as of October 31, 2009 and \$2.2 million and \$0.4 million of revenues and net income, respectively, for the year then ended. Our audit of internal control over financial reporting of Applied Signal Technology, Inc. also did not include an evaluation of the internal control over financial reporting of Pyxis Engineering LLC.

In our opinion, Applied Signal Technology, Inc. maintained, in all material respects, effective internal control over financial reporting as of October 31, 2009, based on the COSO criteria.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated balance sheets of Applied Signal Technology, Inc. as of October 31, 2009, and 2008, and the related consolidated statements of operations, shareholders' equity, and cash flows for each of the three years in the period ended October 31, 2009, and our report dated January 12, 2010, expressed an unqualified opinion thereon.

Notes to Consolidated Financial Statements, October 31, 2009

Note 1: Organization and Summary of Significant Accounting Policies

Organization

Applied Signal Technology, Inc. (AST) provides advanced intelligence, surveillance, and reconnaissance (ISR) solutions to enhance global security. We provide products and services in the areas of communications, signals intelligence (SIGINT) and sensor signature processing. Our SIGINT competencies include communications intelligence (COMINT) electronic intelligence (ELINT), and cyber intelligence. Our sensor signature expertise includes processing information from electro-optic, sonar, radar, magnetic, and chemical sensors to detect changes in the environment. We develop and manufacture sophisticated sensors and digital signal processing equipment that use advanced software.

Substantially, all of our revenues were from contracts with the United States Government or prime contractors for the United States Government.

Estimates

The preparation of consolidated financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and accompanying notes. Actual results could differ significantly from those estimates.

Principles of Consolidation

The financial statements include the accounts of AST and its wholly owned subsidiaries, Dynamics Technology, Inc. (DTI) and Pyxis Engineering, LLC (Pyxis). All significant intercompany transactions have been eliminated.

Subsequent Events

We have evaluated subsequent events through January 12, 2010, which is the date that these financial statements have been filed with the Securities and Exchange Commission (SEC). No material subsequent events have occurred since October 31, 2009, that required recognition or disclosure in these financial statements.

Revenues and Contract Accounting

Revenues and cost recognition. Our contracts are executed through written contractual arrangements, most of which require us to design, develop, manufacture, and/or modify our complex products and perform related services according to specifications provided by the customer. The majority of our contracts are accounted for following the authoritative guidance for construction-type and production-type contracts. We

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

recognize revenue on a limited number of standalone software contracts following the guidance for software revenue. For these software contracts, we defer revenue that is related to billings and customer payments in advance of the completion of the performance requirements set forth in the contracts.

As a supplier to the United States Government, we are required to comply with numerous regulations, including those governing security and contracting practices. Failure to comply with these procurement regulations and practices could result in fines being imposed against us or our suspension for a period of time from eligibility for bidding on, or for award of, new Government contracts. Among the causes for the suspension are violations of various statutes, including those related to procurement integrity, export control, United States Government security regulations, employment practices, protection of the environment, accuracy of records in the recording of costs, and foreign corrupt practices. The Government may investigate and make inquiries of our business practices and conduct audits of contract performance and cost accounting. The Government audits and investigations can take several years to complete. Depending on the results of these audits and investigations, the Government may make claims against us or take exception to certain costs we determined to be recoverable. In the period management determines recoverability is not likely, reserves are established for the estimated loss by a charge to operating income.

We account for cost-reimbursement contracts by charging actual labor, materials, and other direct costs, plus estimated indirect costs of operations as incurred, including overhead, research and development (R&D), and general and administrative expenses (incurred costs). Stock compensation expense is generally not reimbursable under these contracts. Beginning in the first quarter of fiscal year 2009, we apply indirect costs to all subcontract costs. During fiscal year 2008, we did not apply indirect costs to subcontract costs that were in excess of \$250,000 and that met certain other predetermined criteria.

We recognize contract revenues and profits on cost-reimbursement contracts by applying an estimated fee rate to all incurred costs on an individual contract basis. Fee calculations are based on either negotiated fee amounts or management's assessment of the fee amounts that are likely to be earned. On cost-reimbursement contracts, we may bear unexpected cost increases for purposes of maintaining customer relationships. Historically, the effect on operating results and financial condition from cost-reimbursement losses has been minimal.

Our policy for recognizing interim award fees on our cost-plus-award-fee contracts is based on management's assessment as to the likelihood that the award fee or an incremental portion thereof will be earned, on a contract-by-contract basis. Management bases its assessments on numerous factors including contract terms, nature of the work to be performed, our relationship and history with the customer, our history with similar types of projects, and our current and anticipated performance on the specific contract. No award fee is recognized in whole or in part until management determines that it is probable that the award fee or portion thereof will be earned. Historically, management's estimates have generally been consistent with the actual fees awarded. However, changes in facts and circumstances could arise within an award fee period, causing management to either lower or raise the award fee estimate in the period in which the changes occur.

Our time-and-materials contracts are performed on a level-of-effort basis. We recognize revenue for these contracts by applying a negotiated billing rate to the level of effort.

We account for fixed-price contracts by using the percentage-of-completion method. Under this method, we charge labor, materials, and other direct costs, plus estimated indirect costs of operations, as they are incurred. Each period, we recognize as revenue a portion of the contract revenue, based on estimated profits and the degree of completion of the contract as measured by a comparison of the actual costs incurred and the estimated costs to complete. On fixed-price contracts, we bear the risk of any unexpected increases in the cost to develop or manufacture a product, whether due to inaccurate estimates in the bidding process, unanticipated increases in material costs, inefficiencies, or other factors, and these costs could have a materially adverse affect on our results of operations.

We have one licensing agreement for which we accrue royalties on sales of our licensed product by a third party. Since there are essentially no costs associated with this agreement, operating income will increase by the same amount of revenue that we recognize. Royalties contributed approximately \$6,244,000, \$5,184,000, and \$1,530,000 to revenues and operating income during fiscal years 2009, 2008, and 2007, respectively.

The following table represents our revenue concentration during the respective periods by contract type.

	FY09	FY08	FY07
Cost-reimbursement contracts	59%	69%	71%
Time-and-materials contracts	22%	18%	14%
Fixed-price contracts	16%	10%	14%
Royalty contracts	3%	3%	1%

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

100%	100%	100%
=====	=====	=====

The following table represents the revenue concentration from significant contracts during the respective periods. Due to security requirements of the United States Government, we are unable to disclose the actual contract names. Therefore, for the ease of the reader, we have renamed these contracts for reporting purposes in the table below.

	FY09	FY08	FY07
Tiffany	21%	13%	15%
ASA	18%	15%	9%
High Beam	7%	15%	—
Stone Face II	6%	12%	12%
Specter	—	5%	14%
	-----	-----	-----
	52%	60%	50%
	=====	=====	=====

a dash (—) designates less than 5% revenue concentration

The following contracts were indefinite-delivery-indefinite-quantity (IDIQ) contracts: ASA, Tiffany, and Stone Face II. Under the terms of this type of contract, the Government may issue individual delivery orders (DOs) for goods or services that they require. Each DO is treated as a separate contract, which may be awarded on a cost-reimbursable, fixed-price, or time-and-materials basis. We aggregate the DOs under each IDIQ contract for purposes of distinguishing significant revenue concentrations.

ASA is a time-and-materials contract. All of the other contracts referenced above were cost-reimbursement contracts.

For those contracts in which all of the terms have not yet been finalized, revenue does not include an estimated fee rate on cost.

Management reviews contract performance, costs incurred, and estimated completion costs regularly. We adjust revenues and profits on all contracts in the period in which changes, including anticipated losses, become determinable.

Precontract costs represent costs incurred in anticipation of specific expected future contract awards and costs incurred in connection with ongoing contracts for which contract modifications have not been defined or completed at the end of the reporting period. These costs are included in other current assets on the balance sheet. Precontract costs for the periods ending October 31, 2009, and October 31, 2008, were approximately \$1,139,000 and \$1,283,000, respectively. Approximately \$573,000 of the October 31, 2008, balance was recognized as revenues during fiscal year 2009. During the fourth quarter of fiscal year 2009, we determined that the balance associated with a certain contract would not be recovered in revenue, and therefore we decreased precontract costs and operating income by approximately \$539,000.

Indirect rate variance adjustments to operations. We record contract revenues and costs of operations for interim reporting purposes based on annual targeted indirect rates. At year-end, the revenues and costs are adjusted for actual indirect rates. During our interim reporting periods, variances may accumulate between the actual indirect rates and the annual targeted rates. Timing-related indirect spending variances are removed from contract costs, research and development, and general and administrative expenses, and are included in inventory as part of work in process during these interim reporting periods. These rates are reviewed regularly, and we record adjustments for any material, permanent variances in the period they become estimable. At the beginning of fiscal year 2009, we implemented a new indirect rate structure, which changed the application of certain indirect expenses to contracts. We implemented this new structure in accordance with the Federal Acquisition Regulations. Through this new rate structure, we changed the allocation of certain indirect costs from general and administrative expenses to contract costs. In addition, this structure changed the application of certain general and administrative expenses to contracts, which created a one-time increase to operating income of approximately \$450,000 from fixed-price contracts.

Our accounting policy for recording indirect rate variances is based on management's belief that variances accumulated during interim reporting periods will be absorbed by expected contract activities during the remainder of the year. We consider the rate variance to be unfavorable when our actual indirect rates are greater than our annual targeted rates. In contrast, a favorable rate variance occurs when our actual indirect rates are lower than our annual targeted rates. During interim reporting periods, we record unfavorable rate variances as reductions to operating expenses and increases to work-in-process inventory. Favorable rate variances are recorded as increases to operating expenses and decreases to work-in-process inventory.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

If we anticipate that actual contract activities will be different than planned levels, there are alternatives we can utilize to absorb the variance: we can adjust our planned indirect spending during the year, we can modify our billing rates to our customers through the Defense Contract Audit Agency in accordance with the Federal Acquisition Regulations, or we can record adjustments to expense based on estimates of future contract activities for the remainder of the fiscal year.

If our rate variance is unfavorable, the modification of our billing rates will likely increase revenue and operating expenses, and decrease the unfavorable indirect rate variance accumulated in inventory. Fee percentages on fixed-price and time-and-materials contracts will generally decline as a result of any increase to indirect costs. Fee percentages on active cost-reimbursable contracts will generally be unaffected as a result of any increase to indirect costs. Fee percentages on completed cost-reimbursable contracts will generally be reduced. If our rate variance is favorable, the modification of our billing rates will typically decrease revenue and operating expenses, and decrease the favorable indirect rate variance accumulated in inventory. In this event, fee percentages on fixed-price and time-and-materials contracts will generally increase. Fee percentages on cost-reimbursable contracts will generally be unaffected as a result of any reduction to indirect costs, due to the fact that programs will typically expend all of the funds available. Any impact on operating income, however, will depend on a number of other factors, including mix of contract types, contract terms, anticipated performance on specific contracts, and anticipated changes in inventory.

At the end of fiscal year 2009, we absorbed a favorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers. Consequently, we created an insignificant adjustment to revenues and decreased operating expenses by approximately \$329,000.

During fiscal year 2008, we absorbed a favorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers. Consequently, we decreased revenues by approximately \$1,657,000 and operating expenses by approximately \$1,243,000.

During fiscal year 2007, we absorbed an unfavorable indirect rate variance that accumulated during the fiscal year by modifying our billing rates to our customers, which increased revenues by approximately \$958,000 and operating expenses by approximately \$2,224,000.

Accounts receivable and allowance for bad debt. Accounts receivable are segregated between billed and unbilled accounts. For cost-reimbursement contracts, we bill incurred costs and a portion of our fees on a regular basis. Under fixed-price contracts, we either regularly progress bill 90% of incurred costs or bill contract costs on a milestone or unit of delivery basis. Unbilled amounts result from our recognition of contract revenue in advance of contractual billing or progress billing terms.

When evaluating our need for a bad debt allowance, we consider our customer base and their payment history. The majority of our revenues are generated from the United States Government, and therefore credit risk is minimal. We record allowances for bad debt as a reduction to accounts receivable and an increase to bad debt expense. These allowances are recorded in the period a specific collection problem is identified. Once the receivable is deemed uncollectible, the allowance is reversed and the receivable is written off to bad debt expense. Charges to bad debt expense were not significant during fiscal years 2009, 2008, and 2007.

Inventory valuation and disposal. Typical life cycles of our products are eight to ten years or more. In addition, we maintain spare parts in order to repair the equipment. We evaluate our inventory quarterly at interim reporting periods, and assess our ability to sell our products, which include raw materials. Historically, we have sold our inventory at or above cost, so there was typically no decrement in valuation. When we determine that a product has reached the end of its life cycle or there is no longer a need for a certain product, typically, we will dispose of any remaining inventory, and record the associated reduction to inventory.

We recorded a write-down of approximately \$422,000 during fiscal year 2009 and \$1,329,000 during fiscal year 2008. We recorded these write-downs to reflect the estimated market value of one class of our inventoried product. These charges were included in contract costs in our statement of operations. Disposals associated with our raw material represent a minor amount and are included in general and administrative expenses on the statement of operations due to the fact that raw materials could be used in a variety of situations other than contract costs, including R&D. Disposals of raw material inventory were not significant during fiscal years 2009 and 2008. During fiscal year 2009, disposals of other obsolete inventory amounted to approximately \$304,000 and \$251,000 during fiscal year 2008.

Income Taxes

We estimate our income taxes in each of the taxing jurisdictions in which we operate. Our effective tax rate can differ from the statutory rate primarily due to research and development credits and tax exempt interest, offset by the non-tax-deductible nature of meals and entertainment expense and certain types of stock-based compensation expense. In addition, our process involves estimating our current tax expense together with assessing any temporary differences resulting from the different treatment of certain items, such as the timing for recognizing certain expenses, for tax and accounting purposes. These differences may result in deferred tax assets and liabilities, which are included in our consolidated balance sheet. We are required to assess the likelihood that our deferred tax assets, which include net operating loss carryforwards and temporary differences that are expected to be deductible in future years, will be recoverable from future taxable income or other tax planning strategies. If recovery is not likely, we have to provide a valuation allowance based on our estimates of future taxable income in the various taxing jurisdictions, and the amount of deferred taxes that are ultimately realizable. The provision for current and deferred taxes involves

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

evaluations and judgments of uncertainties in the interpretation of complex tax regulations by various taxing authorities. Actual results could differ from our estimates.

We also recognize the impact of an uncertain income tax position on the income tax return at the largest amount that is more-likely-than-not to be sustained upon audit by the relevant taxing authority. An uncertain income tax position will not be recognized if it has less than 50% likelihood of being sustained.

We record interest or penalties related to income taxes as a component of income tax expense in our financial statements.

Please refer to "Notes to Consolidated Financial Statements, Note 8: Income Taxes" for further information.

Price Redetermination

As a Government contractor, we are subject to price redetermination on certain fixed-price contracts if it is determined that we did not price our products and services consistent with the requirements of the Federal Acquisition Regulations. We did not incur any price redeterminations on any of our contracts during fiscal years 2009, 2008, or 2007.

Cash, Cash Equivalents, and Investments

Cash and cash equivalents balances include cash held in banks to support daily cash needs and were approximately \$4,102,000 and \$4,668,000 on October 31, 2009, and October 31, 2008, respectively. We consider all highly liquid debt instruments purchased with an original maturity date of three months or less to be cash equivalents.

Our remaining securities are classified as available for sale and are carried at fair value in short-term and long-term investments. At October 31, 2009, all of our short-term and long-term investments consist of tax-exempt securities. At the time of purchase, management determines the appropriate classification of these securities and re-evaluates such designation as of each balance sheet date. Unrealized gains and losses, net of tax, are reported in shareholders' equity as part of comprehensive income. The cost of securities sold is based on the specific identification method. Realized gains and losses on sales of available-for-sale securities were not material for fiscal years 2009, 2008, and 2007.

The following tables summarize our cash equivalents, short-term securities, and long-term securities (in thousands).

<u>October 31, 2009</u>				
	Amortized Cost	Gross Unrealized Gains	Gross Unrealized Losses	Fair Value
Cash equivalents:

Fair Value Measurements

As of November 1, 2008, we adopted the new accounting standard on fair value. The new standard defines fair value as the exchange price that would be received for an asset or paid to transfer a liability (an exit price) in the principal or most advantageous market for the asset or liability in an orderly transaction between market participants on the measurement date. It also establishes a framework for measuring fair value and enhances disclosures about fair value measurements. The adoption of the new standard did not have a material impact on our results of operations, financial position, or cash flows. The requirements of the new standard as they relate to certain non-financial assets and liabilities have been deferred until the first quarter of our fiscal year 2010. We currently do not expect that the adoption of the portion of the standard relating to these non-financial assets and liabilities will have a material impact on our results of operations, financial position, or cash flows. In October 2008, the FASB issued additional authoritative guidance, which clarified the application of fair value rules in a market that is not active. In April 2009, the FASB issued guidance on determining fair value when the transaction volume has decreased significantly. The adoption of the additional guidance did not have a material impact on our results of operations, financial position, or cash flows.

The standard on fair value measurement establishes a fair value hierarchy that requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value. There are three levels of inputs that may be used to measure fair value:

- **Level 1.** Quoted (unadjusted) prices in active markets for identical assets or liabilities
- **Level 2.** Observable inputs other than quoted prices included in Level 1, such as quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active, or other inputs that are observable or can be corroborated by observable market data
- **Level 3.** Unobservable inputs that are supported by little or no market activity and are significant to the measurement of the fair value of the assets or liabilities

The following table presents information about the Company's financial assets and liabilities measured at fair value on a recurring basis as of October 31, 2009 (in thousands).

	Fair Value Measurement Using		
	Quoted Prices in Active Markets for Identical Instruments (Level 1)	Significant Other Observable Inputs (Level 2)	Total Fair Value

Interest rate swap	\$—	\$116	\$116
	-----	-----	-----
Total liabilities	\$—	\$116	\$116
	=====	=====	=====

As of October 31, 2009, our investment portfolio did not include investments in assets valued using Level 3 inputs.

Our money market funds are priced by using unadjusted prices in active markets for identical assets.

We determine the fair values of our municipal securities by using pricing models with inputs that are observable in the market or can be derived principally from or corroborated by observable market data.

The inputs used to value the interest rate swap are based on observable market data such as the London Inter-Bank Offered Rate (LIBOR) swap rate (floating interest rate), a fixed rate (term loan interest rate), a discount factor, and a calculation of a present value of the interest paid/received based on the expected loan principal. Please refer to “Notes to Consolidated Financial Statements, Note 6: Borrowing Arrangements” for further information.

As of November 1, 2008, we also adopted a new accounting standard that allows an entity to choose to measure certain financial instruments and liabilities at fair value on a contract-by-contract basis. Subsequent fair value measurement for the financial instruments and liabilities an entity chooses to measure will be recognized in earnings. As of October 31, 2009, we did not elect such option for any of our financial instruments or liabilities.

Restricted Cash

We had restricted cash balances of approximately \$663,000 and \$605,000 at October 31, 2009, and October 31, 2008, respectively. These balances include contributions made by our employees residing in California for disability funds. These contributions were paid in lieu of participating in the state-sponsored disability program.

Approximately \$152,000 and \$161,000 of the restricted cash balance was included in prepaids and other current assets on October 31, 2009, and October 31, 2008, respectively. Approximately \$511,000 and \$444,000 was included in other assets on October 31, 2009, and October 31, 2008, respectively.

Property and Equipment

Machinery and equipment as well as furniture and fixtures are depreciated by using the straight-line method over the estimated useful lives of the assets, ranging up to five years. Leasehold improvements are amortized by using the straight-line method over the lesser of the useful life of the assets or the remaining lease term. Construction in process includes costs incurred to build leasehold improvements and test equipment that has not yet been placed into service.

Business Combinations, Goodwill, and Long-Lived Asset Valuation

In accordance with business combination accounting, we allocated the purchase price of Pyxis to the tangible and intangible assets acquired, and liabilities assumed based on their estimated fair values. We engaged a third-party appraisal firm to assist management in determining the fair values of certain assets acquired and liabilities assumed. Such a valuation required management to make significant estimates and assumptions, especially with respect to intangible assets.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Management made estimates of fair value based upon assumptions believed to be reasonable. These estimates were based on historical experience and information obtained from the management of Pyxis and are inherently uncertain. Critical estimates in valuing certain of the intangible assets included, but were not limited to, future expected cash flows from funded backlog, unfunded backlog, future contracts, and non-compete agreements. Unanticipated events and circumstances may occur that may affect the accuracy or validity of such assumptions, estimates, or actual results.

Goodwill valuation. We test goodwill for possible impairment on an annual basis, as of the first day of the fourth quarter, and at any other time if events occur or circumstances indicate that the current carrying amount of goodwill may not be recoverable. Circumstances that could trigger an impairment test include, but are not limited to, a significant adverse change in the business climate or legal factors, an adverse action or assessment by a regulator, unanticipated competition and loss of key personnel.

To perform the goodwill impairment test, we determine the fair value of the reporting unit and compare the fair value to the reporting unit's carrying value, as of the first day of the fourth quarter. We believe AST is one reporting unit, and therefore, we compare the fair value of AST to the total net asset value on our balance sheet. If our total net asset value were to exceed our fair value, we would perform the second step of the impairment test. In the second step, we would compare the implied fair value of our goodwill to our carrying amount, taking a write-down to the extent the carrying amount exceeds the implied fair value. If the fair value of AST exceeds the carrying value of our net assets under step one, then no impairment is indicated and the test is complete.

We passed the first step of our annual impairment test for fiscal year 2009. In addition, there were no indicators of impairment as of October 31, 2009.

Long-lived asset valuation (property, plant and equipment, and intangible assets). We test long-lived assets or asset groups for recoverability when events or changes in circumstances indicate that their carrying amount may not be recoverable. Circumstances that could trigger a review include, but are not limited to, significant decreases in the market price of the asset, significant adverse changes in the business climate or legal factors, accumulation of costs significantly in excess of the amount originally expected for the acquisition or construction of the asset, current period cash flow or operating losses combined with a history of losses or a forecast of continuing losses associated with the use of the asset, and current expectation that the asset will more likely than not be sold or disposed of significantly before the end of its estimated useful life.

We assess recoverability based on the carrying amount of the asset and its fair value, which is generally determined based on the sum of the undiscounted cash flows expected to result from the use and the eventual disposal of the asset. We recognize an impairment loss when the carrying amount is not recoverable and exceeds fair value.

There were no indicators of impairment as of October 31, 2009.

Net Income Per Share Data

Basic net income per share is determined by dividing net income by the weighted average number of common shares outstanding during the period. Diluted net income per share is determined by dividing net income by the weighted average number of common shares used in the basic earnings per share calculation, plus the number of common shares that would be issued assuming conversion of all potentially dilutive securities outstanding under the treasury stock method.

The per share data is as follows (in thousands, except per share amounts).

	Year Ended October 31,		
	2009	2008	2007
Numerator:			
Net income	\$14,529 =====	\$8,017 =====	\$6,812 =====
Denominator:			
Shares used to compute net income per common share – basic	12,890	12,475	12,100
Effect of dilutive stock options and non-vested shares	256	206	214

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

	-----	-----	-----
Shares used to compute net income per common share – diluted	13,146 =====	12,681 =====	12,314 =====
Net income per common share – basic	\$1.13 =====	\$0.64 =====	\$0.56 =====
Net income per common share – diluted	\$1.11 =====	\$0.63 =====	\$0.55 =====

We excluded approximately 463,000, 886,000, and 971,000 potential common shares for fiscal years 2009, 2008, and 2007 from the diluted net income per common share computation for the respective periods, as their effect would be antidilutive.

Comprehensive Income

The components of our annual comprehensive income, net of tax, are as follows (in thousands).

	----- Year Ended October 31, -----		
	2009	2008	2007
Net income	\$14,529	\$8,017	\$6,812
Unrealized gain on securities	9	22	17
Derivative loss	(38) -----	(94) -----	(46) -----
Comprehensive income	\$14,500 =====	\$7,945 =====	\$6,783 =====

The balance of accumulated comprehensive income on securities as of October 31, 2009, and October 31, 2008, was approximately \$49,000 and \$40,000, respectively. The derivative-related accumulated comprehensive loss balance as of October 31, 2009, was approximately \$116,000, and as of October 31, 2008, the derivative-related accumulated balance was a loss of approximately \$78,000.

Dividends

We have paid dividends at the rate of \$0.50 per share per annum, payable quarterly. Continued payment of the dividend is subject to approval by the Board of Directors and is reviewed quarterly.

Total dividends paid during fiscal years 2009, 2008, and 2007 were approximately \$6,507,000, \$6,290,000, and \$6,074,000, respectively.

At October 31, 2009, and October 31, 2008, accrued dividends of approximately \$1,651,000 and \$1,603,000, respectively, were included in other accrued liabilities on the accompanying balance sheet.

Stock-Based Compensation

We have the following stock-based compensation programs that provide our Board of Directors discretion in creating employee equity incentives. As of October 31, 2009, there was a total of 1,343,904 shares reserved for future issuance under all of our equity incentive plans and our ESPP.

Employee Stock Purchase Plan. We maintain our shareholder-approved 1993 Employee Stock Purchase Plan (ESPP), and have reserved 5,400,000 shares of common stock for issuance to employees under the ESPP. For offering periods beginning prior to December 1, 2008, the ESPP allowed eligible employees to purchase common stock through payroll deductions (which cannot exceed 10% of any employee's compensation) at 85% of the closing stock price at the lower of either the date of enrollment or the date of purchase. For offering periods beginning prior to June 1, 2007, our ESPP had a twenty-four month offering period with four six-month purchase periods within each offering period. If the fair market value on the purchase date was lower than the closing stock price on the offering date, all participants were withdrawn from the offering period and re-enrolled into a new offering period. We modified our ESPP such that the length of all offering periods, beginning June 1, 2007, is six months. In 2008, the Board of Directors increased the purchase price and eliminated the look-back provision for offering periods beginning on or after December 1, 2008. The purchase price for participants is now 95% of the closing stock price on the date

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

of purchase, and therefore, the ESPP is non-compensatory under the authoritative guidance for stock-based compensation. The remaining expense related to the final compensatory award under the ESPP was recognized in the first quarter of fiscal year 2009. As of October 31, 2009, 732,769 shares remain reserved for issuance and eligible for purchase under the 1993 Plan.

Stock Option Plan – 1991. Our 1991 Stock Option Plan (1991 Plan) provided for the granting of incentive stock options and non-qualified stock options to our employees, directors, and consultants at exercise 100% of the fair market value on the date of grant, and have a maximum term of ten years. Some options are exercisable only at the end of a two-year vesting period and some options are exercisable at the rate of 20% per year over five years. The 1991 Plan expired on January 19, 2001, and all remaining shares reserved for issuance expired. Options to purchase an aggregate of 37,780 shares of our common stock remain outstanding under the 1991 Plan as of October 31, 2009, all of which are now fully vested.

Stock Option Plan – 2000. Our 2000 Stock Option Plan (2000 Plan) provided for the granting of non-qualified stock options to our employees and consultants at exercise prices ranging from 85% to 100% of the fair market value of the common stock on the date of grant. Options granted prior to 2004 vest over five years, at the rate of 20% on the first anniversary of the date of grant and in equal monthly installments over the remaining 48 months, and have a maximum term of 10 years. Options granted in 2004 through 2006 vest at the rate of 20% per year over five years, on the anniversary date of the grant date. In fiscal year 2008, the Board of Directors terminated the 2000 Plan. Options to purchase an aggregate of 438,325 shares of our common stock remain outstanding under the 2000 Plan as of October 31, 2009.

Stock Option Plan – 2001. Our shareholder-approved 2001 Stock Option Plan (2001 Plan) provides for the granting of incentive stock options and non-qualified stock options to our employees, directors, and consultants at exercise prices ranging from 85% to 100% of the fair market value of the common stock on the date of grant. Options granted prior to 2004 vest over five years, at the rate of 20%, on the first anniversary of the date of grant and in equal monthly installments over the remaining 48 months, and have a maximum term of 10 years. Options granted in 2004 and beyond vest at the rate of 20% per year over five years, on the anniversary date of the grant date. Options to purchase an aggregate of 213,042 shares of our common stock are outstanding and 53,884 shares remain available for grant under the 2001 Plan as of October 31, 2009.

Stock Incentive Plan – 2004. Our shareholder-approved 2004 Stock Incentive Plan (2004 Plan) provides for the granting of incentive stock options, non-qualified stock options, restricted stock, and restricted stock unit awards to our employees, directors, and consultants. The exercise price for an option is equal to 100% of the fair market value of the common stock on the date of grant. No monetary payment is required as a condition of receiving a restricted stock or restricted stock unit award, since the consideration for the award shall be services actually rendered to us or for our benefit. The restrictions on our restricted stock grants typically will lapse in four equal annual installments, on each anniversary of the grant date, conditioned on continued employment. The restrictions on restricted stock granted to our directors typically lapse in three equal annual installments. Some options vest over five years, at the rate of 20%, one year after the date of grant and in equal monthly installments over the remaining 48 months, and have a maximum term of eight years. Other options vest over five years, at the rate of 20% per year. Options to purchase an aggregate of 258,000 shares of our common stock are outstanding and 557,251 shares remain available for grant under the 2004 Plan as of October 31, 2009.

Stock-based compensation expense for equity awards granted subsequent to November 1, 2005, was based on the grant-date fair value estimated in accordance with the provisions of the most recent accounting standards for stock-based compensation, adopted in fiscal year 2006. For stock-based compensation awards granted prior to, but not yet vested as of November 1, 2005, stock-based compensation expense was based on the grant-date fair value previously estimated in accordance with the prior accounting standard. We recognize expense for stock-based compensation awards on a straight-line basis over the requisite service period of the award, which generally equals the vesting period of each grant.

The following table sets forth the total stock-based compensation expense resulting from stock option grants, restricted stock awards, and shares purchased under our ESPP included in our condensed consolidated statements of operations (in thousands).

	—Year Ended October 31, —		
	2009	2008	2007
Contract costs	\$1,397	\$2,747	\$2,388
Research and development	76	177	177
General and administrative	763	1,855	1,585
Stock-based compensation expense before income taxes	\$2,236	\$4,779	\$4,150
Income taxes	(727)	(1,029)	(850)

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Stock-based compensation expense after income taxes	\$1,509	\$3,750	\$3,300
Reduction to basic net income per share	\$0.12	\$0.30	\$0.27
Reduction to diluted net income per share	\$0.11	\$0.30	\$0.27

In fiscal year 2008, we accelerated the vesting of all outstanding but unvested options and all unvested restricted stock awards held by the former CEO in connection with the termination of his employment with us. We also extended the period of exercisability of any vested stock options that he held to two years from the date of termination of employment or expiration of the individual option grant, whichever occurs first. We recognized stock-based compensation expense of approximately \$304,000 during fiscal year 2008 related to these modifications.

We did not grant options during any of the fiscal years presented. Due to the non-compensatory nature of our ESPP Plan beginning December 1, 2008, we did not value any new ESPP grants during fiscal year 2009. In fiscal years 2008 and 2007, we estimated the fair value of shares issued under our ESPP by using the Black-Scholes valuation model using the following weighted average assumptions.

Employee Stock Purchase Plan		
	2008	2007
Risk-free interest rate	2.0%	4.6%
Expected life (years)	0.5	1.9
Expected volatility	39%	39%
Expected dividends	3.9%	2.5%
Weighted average fair value	\$3.79	\$5.59

The risk-free interest rate was based on the Federal Reserve Bank's constant maturities daily interest rate in effect at the ESPP offering date. Our computation of expected volatility reflected a combination of historical and market-based implied volatility. We determined that the combination of historical and market-based implied volatility provided a more accurate reflection of our market conditions and was more representative of future stock price trends than employing solely historical volatility. The expected dividend yield was calculated by taking the total expected annual dividend payout divided by the average stock price.

Stock-based compensation expense recognized in the consolidated statement of operations reflects estimated forfeitures that were based on historical forfeitures.

The net cash proceeds associated with our ESPP were \$ 2,137,000, \$3,195,000, and \$3,531,000 for fiscal years 2009, 2008, and 2007, respectively.

The remaining expense related to the final compensatory award under the ESPP was recognized in the first quarter of fiscal year 2009.

On November 30, 2007, the closing stock price on our ESPP purchase date was lower than the December 1, 2006, offering date, and therefore, all participants were re-enrolled into a new six-month offering period, beginning December 1, 2007, and ending May 31, 2008. This re-enrollment effectively canceled the final six-month purchase period of the original twenty-four month offering. In addition, as a result of the modification, approximately \$89,000 of incremental compensation expense was generated at December 1, 2007, and this was recognized during fiscal year 2008

On November 30, 2006, the closing stock price on our ESPP purchase date was lower than the closing stock price on the participants' enrollment dates; therefore, 411 participants were withdrawn from their current offering period and re-enrolled into a new twenty-four month offering period beginning on December 1, 2006. Consequently, approximately \$758,000 of incremental compensation expense was added to our unrecognized compensation expense at December 1, 2006.

The following table summarizes the option activity under all stock option plans.

	Number of Shares	Weighted Average Exercise Price	Weighted Average Remaining Contractual Term	Aggregate Intrinsic Value
Outstanding at October 31, 2006	1,547,779	\$17.83		

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Exercised	(90,091)	\$9.58		
Forfeitures or expirations	(47,964)	\$18.65		
Outstanding at October 31, 2007	1,409,724	\$18.33		
Exercised	(77,730)	\$10.91		
Forfeitures or expirations	(122,676)	\$25.78		
Outstanding at October 31, 2008	1,209,318	\$18.05		
Exercised	(194,581)	\$9.54		
Forfeitures or expirations	(67,590)	\$21.24		
Outstanding at October 31, 2009	947,147	\$19.57	4.02	\$3,346,726
Vested or expected to vest at October 31, 2009	928,010	\$14.51	4.00	\$3,321,899
Exercisable at October 31, 2009	828,887	\$19.49	3.78	\$3,117,951

The aggregate intrinsic value in the table above represents the total pre-tax value (that is, the difference between our closing stock price on the last trading day of fiscal year 2009 and the exercise price for those options in the money, multiplied by the number of shares) that would have been received by the option holders had all option holders exercised their options on October 31, 2009. This amount changes based on the fair market value of our stock. Total intrinsic value of options exercised was approximately \$2,289,000, \$313,000, and \$584,000, for fiscal years 2009, 2008, and 2007, respectively.

As of October 31, 2009, approximately \$596,000 of total unrecognized compensation costs related to unvested stock options is expected to be recognized over a weighted average period of 1.09 years.

Net cash proceeds from the exercise of stock options were approximately \$1,857,000, \$848,000, and \$863,000 for fiscal years 2009, 2008, and 2007, respectively.

The following table summarizes our restricted stock grant activity.

Nonvested Shares	Shares	Weighted Average Grant Date Fair Value Per Share
Nonvested at October 31, 2006	61,875	\$19.58
Grants	118,813	\$17.64
Vested	(15,472)	\$19.58
Forfeitures	(1,950)	\$18.06
Nonvested at October 31, 2007	163,266	\$17.35
Grants	95,000	\$14.81
Vested	(69,753)	\$17.35
Forfeitures	(13,111)	\$17.55

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Nonvested at October 31, 2008	175,402	\$16.11
Grants	71,300	\$24.33
Vested	(55,326)	\$16.38
Forfeitures	(9,643)	\$17.97
Nonvested at October 31, 2009	181,733	\$17.69

The total fair value of restricted stock grants vested in fiscal years 2009, 2008 and 2007 was \$906,000, \$1,210,000, and \$303,000, respectively. Our unrecognized compensation cost related to nonvested (restricted) stock is approximately \$2,409,000 and is expected to be recognized over a weighted average period of 2.39 years.

We realized an income tax benefit from stock options exercised and restricted stock vested of approximately \$400,000 during fiscal year 2009. We realized an income tax deficiency from stock options exercised and restricted stock vested during fiscal year 2008 of approximately \$247,000 and an income tax benefit from stock option exercises and restricted stock vested during fiscal year 2007 of approximately \$68,000. As required, we present excess tax benefits from the exercise of stock options and the vesting of restricted stock, if any, as financing cash flows rather than operating cash flows.

Recent Accounting Pronouncements

In June 2009, the FASB issued Accounting Standards Update No. 2009-01, “*Generally Accepted Accounting Principles*” (ASC Topic 105), which establishes the Accounting Standards Codification (the Codification or ASC) as the single source of authoritative nongovernmental U.S. GAAP, effective July 1, 2009. The Codification supersedes existing FASB, American Institute of Certified Public Accountants (AICPA), Emerging Issues Task Force (EITF), and related literature. The Codification establishes one level of authoritative GAAP. All other literature is considered non-authoritative. The Codification was effective for the financial statements for our fiscal year ending October 31, 2009. The adoption of this statement had no impact on our financial position, results of operations or cash flows.

In December 2007, the FASB issued a revised standard, *Business Combinations*, (ASC Topic 805). The revised standard retains the purchase method of accounting for acquisitions, but requires a number of changes, including changes in the way assets and liabilities are recognized in the purchase accounting. It changes the recognition of assets acquired and liabilities assumed arising from contingencies, requires the capitalization of in-process research and development at fair value, and requires the expensing of acquisition-related costs as incurred. In April 2009, the FASB amended the standard to clarify the accounting for assets and liabilities arising from contingencies in business combinations. The standard, as amended, will apply prospectively to business combinations occurring in our fiscal year beginning November 1, 2009. The effects on future periods will depend on the nature and significance of business combinations subject to the new rules.

In March 2008, the FASB issued a new standard, *Disclosures about Derivative Instruments and Hedging Activities*, which amends the disclosure requirements in ASC Topic 815-10-50. This standard requires enhanced disclosures about derivatives on a quarterly basis, including qualitative disclosures about objectives and strategies for using derivatives, and quantitative disclosures about the fair value of derivatives, as well as gains and losses on derivative instruments. It also requires disclosures about the volume of derivative activity and credit-risk-related contingent features in derivative agreements. We adopted this standard in the second quarter of fiscal year 2009. The adoption did not affect our financial position, results of operations or cash flows due to the disclosure-only nature of the statement.

In June 2008, the FASB issued guidance on determining whether instruments granted in share-based payment transactions are participating securities. This guidance, included in ASC Topic 260-10-45, affects the calculation of earnings per share when a company has unvested share-based payment awards with non-forfeitable rights to dividends. The two-class method of calculation would be required, which means that dividends and undistributed earnings must be allocated between common shares and the unvested awards in calculating Basic EPS. This guidance will be effective for our fiscal year beginning November 1, 2009. We expect that adoption of this guidance may reduce our Basic and Diluted EPS by \$.01.

In April 2009, the FASB amended the guidance on recognition of other-than-temporary impairments of debt securities, included in ASC Topic 320-10-35. The amendment establishes a new method of recognizing and reporting other-than-temporary impairments of debt securities and requires additional disclosures. We adopted this guidance in the third quarter of fiscal year 2009. The adoption did not affect our financial position, results of operations, or cash flows.

In May 2009, the FASB issued a standard on accounting for and reporting on subsequent events (ASC Topic 855). This standard sets forth: 1) the period after the balance sheet date during which management of a reporting entity should evaluate events or transactions that may occur for potential recognition or disclosure in the financial statements, 2) the circumstances under which an entity should recognize events or transactions occurring after the balance sheet date in its financial statements, and 3) the disclosures that an entity should make about events or transactions that occurred after the balance sheet date. We began applying the new standard in the third quarter of 2009 and its adoption did not affect our

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

financial statements, other than the additional disclosures required, which can be found in “Notes to Consolidated Financial Statements, Note 1: Organization and Summary of Significant Accounting Policies.”

In October 2009, the FASB issued ASC Update No. 2009-13, updating ASC Topic 605, *Revenue Recognition*. This update provides new standards for revenue recognition for arrangements with multiple deliverables. These new standards affect the determination of when the individual deliverables may be treated as separate units of accounting. Additionally, these new standards modify the method of allocating consideration to the deliverables. The relative fair value method based on selling prices will be required and the residual method of allocating arrangement consideration will no longer be permitted. These new standards are effective for our fiscal year beginning November 1, 2010; however, early adoption is permitted. We are currently evaluating the potential impact, if any, on our financial position, results of operations, or cash flows as a result of adopting these new standards.

In October 2009, the FASB issued ASC Update No. 2009-14, updating ASC Topic 985, *Software*. This update provides new standards that amend the scope of previous software revenue guidance by excluding non-software components of tangible products and certain software components of tangible products. These new standards are effective for our fiscal year beginning November 1, 2010; however, early adoption is permitted. We are currently evaluating the potential impact, if any, on our financial position, results of operations, or cash flows as a result of adopting these new standards.

Note 2: Customer Concentration

The following table identifies the source of our revenues for fiscal years 2009, 2008, and 2007 by market.

	FY09	FY08	FY07
Intelligence	83%	80%	78%
Defense	12%	16%	20%
Commercial	5%	4%	2%
Foreign	-----	-----	-----
	100%	100%	100%
	=====	=====	=====

a dash (—) designates less than 1% revenue concentration

Within the customer types, contracts with two intelligence community customers and one defense customer represented a significant portion of revenues.

The table below identifies the revenue concentration (as a percentage of total revenues) from all contracts with each significant customer.

	FY09	FY08	FY07
Intelligence community customer 1	33%	25%	26%
Intelligence community customer 2	43%	50%	47%
Largest defense customer	9%	12%	15%
	-----	-----	-----
	85%	87%	88%
	=====	=====	=====

Revenues from the United States Government can also be categorized as direct purchases and subcontracts, where we are the supplier to another contractor. The following table distinguishes revenue (as a percentage of total revenues) between those two categories.

	FY09	FY08	FY07
Direct purchases	65%	65%	69%
Subcontracts	30%	31%	29%
	-----	-----	-----

95%	96%	98%
=====	=====	=====

Note 3: Inventory

Inventories are stated at the lower of average cost or market and consisted of the following (in thousands).

	October 31,	
	2009	2008
Raw materials	\$767	\$799
Work in process	7,070	6,911
Finished goods	541	431
	-----	-----
	\$8,378	\$8,141
	=====	=====

Inventory activities during fiscal year 2009 included a write-down of approximately \$422,000 and disposals of obsolete products of approximately \$304,000. Inventory activities during fiscal year 2008 included a write-down of approximately \$1,329,000 and disposals of obsolete products of approximately \$251,000.

Note 4: Business Combination

On September 1, 2009, we acquired all of the outstanding membership interests in Pyxis Engineering, LLC, a Maryland limited liability company (Pyxis). We believe the Pyxis acquisition will complement our existing software and network services business in the defense and intelligence communities. The acquisition allows us the opportunity to expand our software and network services business into the emerging cyber security market. The amount of goodwill recorded for the Pyxis acquisition at October 31, 2009 was approximately \$13.2 million and reflected the value of the future engineering services revenue opportunities associated with the cyber security marketplace.

The preliminary purchase price as of October 31, 2009, was approximately \$16.1 million, plus an estimated \$0.5 million in transaction costs, totaling \$16.6 million. Approximately \$1.6 million that would otherwise be distributed to the sellers at the closing was deposited into an escrow account to provide a fund against which we may make claims for damages, if any, based on breaches of the representations made by Pyxis in the purchase agreement. Fifty percent of the escrow account will be released on the one year anniversary of the closing date and the remainder in 18 months from the closing date, net of any claims made by us against Pyxis or the sellers under the terms of the purchase agreement.

The sellers are also entitled to additional consideration (the Earn-Out) based upon the performance of the business acquired from Pyxis during the 12-month period ending October 31, 2010 (Earn-Out Period). If total revenue that we generate from the acquired Pyxis contracts plus new contracts in our cyber intelligence business, is in excess of \$13.25 million during the Earn-Out Period, then we will pay the sellers all of such excess up to a maximum of \$3.75 million for revenues of \$17 million or more. Any payment of the Earn Out to sellers will result in an increase to goodwill. We funded the purchase price from our current investments. The results of operations of the acquisition are included in the accompanying statement of operations since the acquisition date.

We have funded the purchase price from our current investments. The results of operations of the acquisition are included in the accompanying statement of operations since the acquisition date.

The aggregate preliminary purchase price for the acquisition was allocated to the tangible and identifiable intangible assets acquired and liabilities assumed based on their estimated fair values at the date of acquisition. The fair values assigned to the intangible assets acquired totaled approximately \$1.9 million and are based on estimates, assumptions, and other information compiled by management, including independent valuations that utilize established valuation techniques. Intangible assets related to the acquisition, excluding goodwill, are amortized to expense on a straight-line basis over their estimated useful lives ranging from one to seven years.

We allocated the aggregate preliminary purchase price for the acquisition to the tangible and identifiable intangible assets acquired and liabilities assumed based on their estimated fair values at the date of acquisition as follows (in thousands).

Cash and cash equivalents	\$1,382
Accounts receivable and other current assets	4,047

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Property and equipment	19
Accrued payroll and other current liabilities	(3,365)
Notes payable	(625)
Net tangible assets assumed	1,458
Amortizable intangible assets:	
Future contracts	880
Unfunded backlog	610
Funded backlog	300
Non-compete agreements	140
Total amortizable intangible assets	1,930
Goodwill	13,194

Total purchase price	\$16,582
	=====

The purchase price allocation is subject to change if we obtain additional information concerning the fair value of certain assets and liabilities acquired from Pyxis.

The following unaudited pro forma financial information reflects the combined results of AST and Pyxis as if the acquisition of Pyxis had taken place as of the beginning of the periods presented. The unaudited pro forma financial information is not intended to represent or be indicative of the results of operations or financial condition of AST that would have been reported had the acquisition been completed as of the dates presented, and should not be taken as representative of the future results of operations or financial condition of AST.

	— Twelve Months Ended —	
	October 31, 2009	October 31, 2008
Revenue	\$215,312	\$197,476
Net income	\$14,058	\$7,811
Basic net income per share	\$1.09	\$0.63
Diluted net income per share	\$1.07	\$0.62

The pro forma financial information presented above includes charges to operating expense for the amortization of the intangible assets and for retention bonus expense of approximately \$699,000 and \$584,000, respectively, for each fiscal year 2009 and 2008.

Note 5: Goodwill and Intangible Assets

The goodwill and identifiable intangible assets are related to our September 2009 acquisition of Pyxis Engineering, LLC and July 2005 acquisition of Dynamics Technology, Inc. (DTI).

Goodwill

Goodwill is not subject to amortization. Rather, we evaluate goodwill for impairment at least annually or more frequently if events and changes in circumstances suggest that the carrying amount may not be recoverable. No impairment was recognized in fiscal year 2009.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Goodwill balance at October 31, 2008	\$19,964
	13,194

Note 6: Borrowing Arrangements**Revolving Line of Credit**

At October 31, 2009, we had a revolving line of credit (the Line of Credit) under which Wells Fargo Bank (Wells Fargo), could advance funds to us, up to a maximum principal amount of \$3 million. The Line of Credit will expire on March 1, 2010.

At October 31, 2009, we had three standby letters of credit under the Line of Credit, totaling approximately \$1,407,000. One letter of credit, related to our Sunnyvale, California, facilities lease, had a committed balance of approximately \$1,221,000 at October 31, 2008, and 2007. The second letter of credit was a requirement of our workers compensation insurance, and had a committed balance of approximately \$150,000 at October 31, 2008, and 2007. The third letter of credit, a requirement of one of our customers had a committed balance of \$36,000. We do not pay interest on the amounts associated with the standby letters of credit.

As a result of the committed but unused funds associated with the three letters of credit, the total amount under the Line of Credit available for borrowing was approximately \$1,593,000. No fees or interest were associated with this unused portion. Borrowings under the Line of Credit bear interest at Wells Fargo's reference rate (3.25% at October 31, 2009) and interest on those borrowings are payable monthly. As security for its indebtedness under the Line of Credit, we have granted to Wells Fargo a security interest in our cash and marketable securities maintained with an affiliate of Wells Fargo.

Term Loan and Interest Rate Swap

Effective July 1, 2005, and in connection with the acquisition of DTI, we entered into a term loan with Wells Fargo in the principal amount of \$10 million, plus interest, the proceeds of which were used for acquisition financing (the Term Loan).

The Term Loan bears interest at a rate per annum equal to 1.750% above the London Inter-Bank Offered Rate (LIBOR) (0.24% at October 31, 2009). The Term Loan is for a seven-year term ending on July 1, 2012. The loan terms require us to make monthly payments of principal and interest.

As security for our indebtedness under the Term Loan, we have granted to Wells Fargo a security interest in our accounts receivable, general intangibles, inventory, and equipment.

We are required to maintain certain financial covenants setting forth minimum ratios for quick ratio and fixed charge coverage and maximum ratios for total liabilities to tangible net worth. As of October 31, 2009, we were in compliance with these covenants.

The following table sets forth our scheduled debt maturities under the Term Loan (in thousands).

Year	Debt Maturities
2010	\$1,429
2011	1,429
2012	1,071

Total	\$3,929
	=====

We are exposed to market risk from changes in interest rates on the Term Loan, and manage this exposure through the use of an interest rate swap agreement with Wells Fargo. By locking in a fixed rate for the entire term of the loan, this strategy decreases the variability of earnings and cash flows resulting from interest rate fluctuations and lowers the overall borrowing costs should interest rates rise. The interest rate swap is accounted for under the authoritative guidance for derivative instruments, and it is designated as a cash flow hedge. We do not anticipate losses on the agreement due to counterparty credit issues. Under this swap, we pay an interest rate of 4.33% over the seven-year term of the loan and receive an average floating rate of LIBOR on the notional amount of the loan. Thus, we exchanged a variable rate obligation for a fixed interest

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

obligation, resulting in an effective interest rate of 6.08%.

The effective portion of the cash flow hedge is reported as other comprehensive income and reclassified into earnings in the same period during which the hedged transaction affects earnings. At October 31, 2009, the effective portion of the hedge was a deferred loss of approximately \$188,000 on a gross basis. The deferred loss net of taxes was approximately \$116,000 and was included in other comprehensive income and long-term liabilities on our balance sheet. For the years 2009, 2008, and 2007, we recognized losses related to the hedge of \$210,000, \$232,000, and \$7,000, respectively, in other comprehensive income. During fiscal years 2009 and 2008, we recognized interest expense of approximately \$168,000 and \$58,000, respectively, reclassified from other comprehensive income. During fiscal year 2007, we recognized interest income of approximately \$83,000, reclassified from other comprehensive income. Over the next twelve months, we expect to reclassify approximately \$130,000 of the loss to interest expense as principle on the Term Loan is repaid and the related swap-instrument notional amount is reduced.

We assess effectiveness of the hedge instrument regularly. The ineffective portion of the gain or loss, if there is one, would impact earnings as it occurs. There is no ineffective portion of the outstanding swap as of October 31, 2009.

Note 7: Commitments

The following table sets forth our contractual obligations, excluding interest payments on our debt, as of October 31, 2009 (in thousands).

Fiscal Year	Total	Payments due by period				
		2010	2011	2012	2013	Thereafter
Operating lease obligations	\$32,261	\$7,593	\$7,513	\$5,116	\$3,892	\$8,147
Purchase obligations	8,447	8,447	—	—	—	—
Loan obligations – principal	3,929	1,429	1,429	1,071	—	—
Total	\$44,637	\$17,469	\$8,942	\$6,187	\$3,892	\$8,147

Our operating lease obligations consist of non-cancelable lease agreements for our facilities, which expire at various dates between fiscal years 2010 and 2016. Certain leases contain escalation clauses and requirements for the payment of property taxes, insurance, and maintenance expenses. Rent expense under operating leases was approximately \$7,479,000, \$7,617,000, and \$7,208,000 in fiscal years 2009, 2008, and 2007, respectively.

We do not have any off-balance sheet arrangements with unconsolidated entities or related parties, and, accordingly, our liquidity and capital resources are not subject to off-balance sheet risks from unconsolidated entities.

Note 8: Income Taxes

The provision for income taxes for the years ended October 31, 2009, 2008, and 2007 consists of the following (in thousands).

	Year Ended October 31,		
	2009	2008	2007

Deferred tax liabilities:		
Accrued expenses and reserves	(699)	(572)
DTI and Pyxis— intangibles	(57)	(65)
	-----	-----

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

Total deferred tax liabilities	(756)	(637)
	-----	-----
Total deferred tax assets/(liabilities)	\$9,159	\$10,699
	=====	=====

Current deferred tax asset balances at October 31, 2009, and 2008 were approximately \$4,965,000 and \$6,290,000, respectively, and included in prepaids and other current assets in the accompanying balance sheets. Long-term deferred tax assets balances at October 31, 2009, and 2008 were approximately \$4,196,000 and \$4,410,000, respectively, and are included in long-term deferred tax assets in the accompanying balance sheets.

As of October 31, 2009, management has determined that our deferred tax assets are “more likely than not” to be realized in future periods and, therefore, we have not provided a valuation allowance on the deferred tax asset.

Based on the terms of the acquisition of Pyxis, we are able to amortize the acquired goodwill balance of \$13,194,000 over the next fifteen years for federal tax purposes.

During the second quarter of fiscal year 2008, we filed an Application for Change in Accounting Method with the Internal Revenue Service (IRS) under the automatic-consent provisions. Based upon the change in method filed with the IRS, we re-measured our deferred tax asset balance related to the determination of tax basis depreciation on certain property and equipment assets as of October 31, 2006. This led to a tax benefit of approximately \$332,000.

As of October 31, 2009, management has determined that our deferred tax assets are “more likely than not” to be realized in future periods and, therefore, we have not provided a valuation allowance on the deferred tax asset.

In general, our income tax returns are subject to examination by United States federal tax authorities for tax years 2005 onward and by various United States state tax authorities for tax years 2004 onward. The Internal Revenue Service audit for the year ended October 31, 2007, has been completed and did not result in any adjustment. The activity of our uncertain tax positions, including all federal and state jurisdictions is as follows (in thousands).

Balance at October 31, 2007	\$—
Additions for tax positions related to the current year	1,450
Additions for tax positions from the prior years	—
Reductions for tax positions from prior years	—
Statute of limitations expirations	-----
Balance at October 31, 2008	\$1,450
	=====
Additions for tax positions related to the current year	64
Additions for tax positions from the prior years	4
Reductions for tax positions from prior years	(1,307)
Statute of limitations expirations	-----
Balance at October 31, 2009	\$211
	=====

During fiscal year 2009, we recorded gross unrecognized tax benefits of approximately \$64,000, and reversed approximately \$1,307,000 in unrecognized tax benefits. The reversal is primarily due the filing of an Application for Change in Accounting Method with the Internal Revenue Service (IRS) under the automatic-consent provisions related to our temporary differences and it created a reduction to income tax expense of approximately \$245,000. If our balance as of October 31, 2009 is recognized, approximately \$211,000 would impact our effective tax rate. Interest and penalties related to unrecognized tax benefits are included within the provision for income taxes in our statement of operations. We recognized approximately \$6,000 of interest and penalties relating to unrecognized tax benefits as of October 31, 2009.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

During fiscal year 2008, we recorded total gross unrecognized tax benefits of approximately \$1,450,000, primarily due to uncertain tax positions related to our tax credits and tax treatment of certain temporary differences.

If our estimates of the federal and state income tax liabilities are less than the ultimate assessment, a further charge to expense would result. As of October 31, 2009, we do not expect any unrecognized tax benefits to be paid in the next twelve months.

Note 9: Retirement Plan

All employees who perform at least 1,000 hours of service per year are covered under our retirement plan (the Retirement Plan). The Retirement Plan is maintained by an outside administrator. Currently, company contributions to the Retirement Plan are based on qualified compensation up to a maximum of 6% of \$235,000 per employee, per annum at the rate of \$0.75 per \$1.00 contributed by the employee. This is a change from the Retirement Plan through fiscal year 2008, which was calculated at the rate of 4% of qualified compensation up to a maximum of \$230,000 per employee per annum. Contributions continue to be discretionary and we continue to accrue the accumulated contributions, which are payable biweekly, to the Retirement Plan. We have incurred approximately \$4,435,000, \$3,150,000, and \$2,925,000 in expense under the Retirement Plan for fiscal years 2009, 2008, and 2007, respectively.

Note 10: Segment Reporting

We have reviewed our business operations and determined that we operate in a single homogeneous business segment. We sell similar products and services with similar economic characteristics to similar classes of customers, primarily to the United States Government, its agencies, or prime contractors for the United States Government. The technologies and the operations of our divisions are highly integrated. Revenues and costs are reviewed monthly by management on an individual contract basis as a single business segment.

Note 11: Contingencies

Product warranties. Our products are warranted against defective workmanship and materials for a period of one year from the date of acceptance by the original purchaser. Warranty costs were approximately \$117,000, \$181,000, and \$306,000 for fiscal years 2009, 2008, and 2007, respectively.

Guarantees. From time to time, we enter into certain types of contracts that contingently require us to indemnify parties against third-party claims. These contracts primarily relate to 1) certain real estate leases under which we may be required to indemnify property owners for environmental and other liabilities, and other claims arising from our use of the applicable premises and 2) certain agreements with our officers, directors, and employees under which we may be required to indemnify such persons for liabilities arising out of their employment relationship. The terms of such obligations vary. Generally, a maximum obligation is not explicitly stated. Because the obligated amounts of these types of agreements often are not explicitly stated, the overall maximum amount of the obligations cannot be reasonably estimated. Historically, we have not been obligated to make significant payments for these obligations, and no liabilities have been recorded for these obligations on the balance sheet as of October 31, 2009, or 2008.

Legal proceedings. We are subject to litigation, from time to time, in the ordinary course of business including, but not limited to, allegations of wrongful termination or discrimination, or Governmental agency investigations. As a Government contractor, we may also be subject to investigations by the United States Government for alleged violations of procurement or other federal laws. Under present Government procurement regulations, if judged in violation of procurement or other federal civil laws, we could be suspended or barred from eligibility for awards of new Government contracts.

On March 11, and July 19, 2005, purported securities class action complaints were filed in the United States District Court, Northern District of California. The cases were considered as *In re Applied Signal Technology Inc. Securities Litigation*, Master File No. 4:05-cv-1027 (SBA). The amended consolidated complaint is brought on behalf of a putative class of persons who purchased our Company's securities during a class period of August 24, 2004, through February 22, 2005. The complaints name us, our former Chief Executive Officer, and our Chief Financial Officer as defendants, and allege that false and misleading statements regarding us were issued during the class period. The parties have agreed to a settlement, which will be paid by our insurers. On August 3, 2009, the District Court gave final approval to a settlement of this case. A purported appeal of a ruling denying a motion to intervene has been filed.

On August 12, 2008, a purported shareholder derivative action was filed in the Superior Court, State of California. *Shoemaker v. Devine et al.*, No. 1:08-CV-119810. It is brought on purported behalf of the Company, against current and former members of the Board of Directors, our Chief Financial Officer, and our former Chief Executive Officer, asserting that these individuals breached their fiduciary duties, based on essentially the same allegations as the class action case. No damages are specified. As the case is brought on purported behalf of the Company, there is no possible loss that might be incurred as a result of this proceeding.

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

On May 18, 2009, we filed a complaint for patent infringement in the United States District Court for the Northern District of California, Case Number 3:09-cv-2180-SBA, against Emerging Market Communications, Paradise Datacom LLC, and ViaSat, Inc. On June 12, 2009, we filed an amended complaint adding EMC Satcom Technologies, Inc. as a defendant. All of the defendants have been served with the complaint and have answered; each asserts standard patent case defenses. On October 15, 2009, ViaSat, Inc. filed a counterclaim against us for infringement of four patents. On November 9, 2009, we answered those counterclaims, denying infringement and alleging that the ViaSat patents are invalid. The Court held a case management conference on November 19, 2009, and set a claim construction hearing for September 23, 2010. No trial date has been set. The Court referred the parties to a settlement conference with a Magistrate Judge in the Northern District of California. That conference is to be preceded by informal discussions between the parties, and will take place on March 25 and 26, 2010. If we are unable to come to a resolution of the patent infringement claims with the defendants, we expect to vigorously pursue our claims.

Item 9: Changes in and Disagreements with Accountants on Accounting and Financial Disclosure

None.

Item 9A: Controls and Procedures

Conclusions regarding disclosure controls and procedures. Under the supervision and with the participation of our management, including our Chief Executive Officer and our Chief Financial Officer, we evaluated the effectiveness of our disclosure controls and procedures, as such term is defined under Rule 13a-15(e) promulgated under the Securities Exchange Act of 1934, as amended. Based upon that evaluation, our Chief Executive Officer and Chief Financial Officer concluded that our disclosure controls and procedures were effective as of the end of the period covered by this annual report.

Management's report on internal control over financial reporting. Our management is responsible for establishing and maintaining adequate internal control over financial reporting, as defined in Exchange Act Rule 13a-15(f). Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles.

Under the supervision and with the participation of our management, including our Chief Executive Officer and Chief Financial Officer, we conducted an evaluation of the effectiveness of our internal control over financial reporting by using the criteria established by the Committee of Sponsoring Organizations of the Treadway Commission (COSO) in *Internal Control—Integrated Framework*. Our assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of Pyxis Engineering LLC ("Pyxis"), acquired on September 1, 2009, which is included in our fiscal year 2009 consolidated financial statements and which constituted \$3.7 million and \$1.9 million of total assets and net assets, respectively, as of October 31, 2009, and which represented \$2.2 million and \$0.4 million of revenues and net income, respectively, for the year then ended. Based on our evaluation under the framework in *Internal Control—Integrated Framework*, our management concluded that our internal control over financial reporting was effective as of October 31, 2009.

The effectiveness of our internal control over financial reporting as of October 31, 2009, has been audited by Ernst & Young LLP, an independent registered public accounting firm, as stated in their report, which is included in "Part II, Item 8: Consolidated Financial Statements and Supplementary Data" of this annual report on Form 10 K.

Changes in internal control over financial reporting. There was no change in our internal control over financial reporting during the fourth quarter of fiscal year 2009 that has materially affected, or is reasonably likely to materially affect, our internal control over financial reporting.

Limitations of the effectiveness of internal control. A control system, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the internal control system are met. Because of the inherent limitations of any internal control system, no evaluation of controls can provide absolute assurance that all control issues, if any, within a company have been detected. Notwithstanding these limitations, our disclosure controls and procedures are designed to provide reasonable assurance of achieving their objectives. Our Chief Executive Officer and Chief Financial Officer have concluded that our disclosure controls and procedures are, in fact, effective at the "reasonable assurance" level.

Item 9B: Other Information

None.

Part III

The information required by Part III is incorporated by reference from the information identified below contained in the Applied Signal Technology, Inc. Proxy Statement for the Annual Meeting of Shareholders to be held on March 17, 2010 (the Proxy Statement). The Proxy

Statement is to be filed with the Securities and Exchange Commission pursuant to Regulation 14A of the Exchange Act, no later than 120 days after the end of the fiscal year covered by this annual report.

Item 10: Directors, Executive Officers, and Corporate Governance

The information required by this item concerning our Board of Directors, our audit committee and audit committee financial expert is incorporated by reference to the information in the section entitled “Information About our Directors” and “Corporate Governance” in the Proxy Statement. Information concerning our executive officers is incorporated by reference to the information in the section of our Proxy Statement entitled “Executive Compensation and Other Information—Information About the Executive Officers.”

The information required by this item concerning executive officers is incorporated by reference to the section entitled “Executive Officers of the Registrant” in the Proxy Statement.

The information required by this item concerning compliance with Section 16(a) of the Securities Exchange Act of 1934, as amended, is incorporated by reference to information in the section entitled “Security Ownership of Certain Holders – Section 16(a) Beneficial Ownership Reporting Compliance” in the Proxy Statement.

The Board of Directors of Applied Signal Technology, Inc. has adopted a code of ethics that applies to our principal executive officers, principal financial officer, and controller, as well as all other employees. A copy of this code of ethics has been posted on our Internet website at www.appsig.com. In addition, hard copies can be obtained free of charge through our investor relations department. Any amendments to, or waivers from, a provision of our code of ethics that applies to our principal executive officer, principal financial officer, controller, or persons performing similar functions and that relate to any element of the code of ethics enumerated in paragraph (b) of Item 406 of Regulation S-K shall be disclosed by posting such information on our website.

Item 11: Executive Compensation

The information required by this item is incorporated by reference to the sections in the Proxy Statement entitled “Director Compensation,” “Executive Compensation and Other Matters,” and “Corporate Governance—Compensation Committee Interlocks and Insider Participation.”

Item 12: Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters

The information required by Item 403 of Regulation S-K is incorporated by reference to the section entitled “Security Ownership of Certain Beneficial Owners and Management” in the Proxy Statement.

The information required by Item 201(d) of Regulation S-K is incorporated by reference to the section entitled “Equity Compensation Plan Information” in the Proxy Statement.

Item 13: Certain Relationships and Related Transactions, and Director Independence

Not applicable.

Item 14: Principal Accountant Fees and Services

The information required by this item is herein incorporated by reference to the section entitled “Proposal No. 3, Ratification of Selection of Independent Auditors” in the Proxy Statement.

Part IV

Item 15: Exhibits and Consolidated Financial Statement Schedules

(a) (1) and (2) The following consolidated financial statements of Applied Signal Technology, Inc. are filed as part of this report under Item 8:

- Balance Sheets – October 31, 2009, and 2008
- Statements of Operations – Years ended October 31, 2009, 2008, and 2007
- Statement of Shareholders’ Equity – Years ended October 31, 2009, 2008, and 2007

Edgar Filing: APPLIED SIGNAL TECHNOLOGY INC - Form 10-K

- Statements of Cash Flows – Years ended October 31, 2009, 2008, and 2007
- Notes to Consolidated Financial Statements – October 31, 2009

All schedules for which provision is made in the applicable accounting regulations of the Securities and Exchange Commission are not required under the related instructions or are inapplicable, and therefore have been omitted.

(b) Listing of Exhibits – See Exhibit Index on page 76 of this report on Form 10-K.

Signatures

Pursuant to the requirements of Section 13 or 15(d) of the Securities Exchange Act of 1934, the registrant has duly caused this report to be signed on its behalf by the undersigned, therewith duly authorized.
