FORWARD-LOOKING STATEMENTS

Certain of the matters discussed in this report constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Such forward-looking statements are subject to risks and uncertainties, which could cause actual results to differ materially from those anticipated. Such statements are based on management's beliefs as well as assumptions made by and information currently available to management. When used herein, the words "anticipate," "intend," "estimate," "believe," "expect," "plan," "should," "hypothetical," "potential," "forecast variations of such words and similar expressions are intended to identify forward-looking statements. Factors that may cause actual results to differ are often presented with the forward-looking statements themselves. Other factors that could cause actual results to differ materially from those contemplated in any forward-looking statements made by us herein are discussed in Item 1. Financial Statements—Note 9. Commitments and Contingent Liabilities, Item 2.

Management's Discussion and Analysis of Financial Condition and Results of Operations, and other factors discussed in filings we make with the United States Securities and Exchange Commission (SEC). These factors include, but are not limited to:

adverse changes in the demand for or the price of the capacity and energy that we sell into wholesale electricity markets,

adverse changes in energy industry law, policies and regulation, including market structures and a potential shift away from competitive markets toward subsidized market mechanisms, transmission planning and cost allocation rules, including rules regarding how transmission is planned and who is permitted to build transmission in the future, and reliability standards,

any inability of our transmission and distribution businesses to obtain adequate and timely rate relief and regulatory approvals from federal and state regulators,

changes in federal and state environmental regulations that could increase our costs or limit our operations, changes in nuclear regulation and/or general developments in the nuclear power industry, including various impacts from any accidents or incidents experienced at our facilities or by others in the industry, that could limit operations of our nuclear generating units,

actions or activities at one of our nuclear units located on a multi-unit site that might adversely affect our ability to continue to operate that unit or other units located at the same site,

any inability to balance our energy obligations, available supply and risks,

any deterioration in our credit quality or the credit quality of our counterparties, including in our leveraged leases, availability of capital and credit at commercially reasonable terms and conditions and our ability to meet cash needs, changes in the cost of, or interruption in the supply of, fuel and other commodities necessary to the operation of our generating units,

delays in receipt of necessary permits and approvals for our construction and development activities,

delays or unforeseen cost escalations in our construction and development activities,

any inability to achieve, or continue to sustain, our expected levels of operating performance,

any equipment failures, accidents, severe weather events or other incidents that impact our ability to provide safe and reliable service to our customers, and any inability to sufficiently obtain coverage or recover proceeds of insurance on such matters,

•increases in competition in energy supply markets as well as competition for certain rate-based transmission projects, any inability to realize anticipated tax benefits or retain tax credits,

challenges associated with recruitment and/or retention of a qualified workforce,

adverse performance of our decommissioning and defined benefit plan trust fund investments and changes in funding requirements, and

changes in technology and customer usage patterns.

All of the forward-looking statements made in this report are qualified by these cautionary statements and we cannot assure you that the results or developments anticipated by management will be realized or even if realized, will have the expected consequences to, or effects on, us or our business prospects, financial condition or results of operations. Readers are cautioned not to place undue reliance on these forward-looking statements in making any investment decision. Forward-looking statements made in this report apply only as of the date of this report. While we may elect

to update forward-looking statements from time to time, we specifically disclaim any obligation to do so, even if internal estimates change, unless otherwise required by applicable securities laws.

The forward-looking statements contained in this report are intended to qualify for the safe harbor provisions of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

This combined Form 10-Q is separately filed by Public Service Enterprise Group Incorporated (PSEG), PSEG Power LLC (Power) and Public Service Electric and Gas Company (PSE&G). Information relating to any individual company is filed by such company on its own behalf. Power and PSE&G each is only responsible for information about itself and its subsidiaries.

Note 1. Organization and Basis of Presentation

Organization

PSEG is a holding company with a diversified business mix within the energy industry. Its operations are primarily in the Northeastern and Mid-Atlantic United States and in other select markets. PSEG's four principal direct wholly owned subsidiaries are:

Power—which is a multi-regional, wholesale energy supply company that integrates its generating asset operations and gas supply commitments with its wholesale energy, fuel supply and energy trading functions through three principal direct wholly owned subsidiaries. Power's subsidiaries are subject to regulation by the Federal Energy Regulatory Commission (FERC), the Nuclear Regulatory Commission (NRC) and the states in which they operate.

PSE&G—which is a public utility engaged principally in the transmission of electricity and distribution of electricity and natural gas in certain areas of New Jersey. PSE&G is subject to regulation by the New Jersey Board of Public Utilities (BPU) and the FERC. PSE&G also invests in solar generation projects and has implemented energy efficiency and demand response programs, which are regulated by the BPU.

PSEG Energy Holdings L.L.C. (Energy Holdings)—which primarily has investments in leases and solar generation projects through its direct wholly owned subsidiaries. Certain Energy Holdings' subsidiaries are subject to regulation by the FERC and the states in which they operate. Energy Holdings has also been awarded a contract to manage the transmission and distribution assets of the Long Island Power Authority (LIPA) starting in 2014.

PSEG Services Corporation (Services)—which provides management, administrative and general services to PSEG and its subsidiaries at cost.

Basis of Presentation

The respective financial statements included herein have been prepared pursuant to the rules and regulations of the Securities and Exchange Commission (SEC) applicable to Quarterly Reports on Form 10-Q. Certain information and note disclosures normally included in financial statements prepared in accordance with accounting principles generally accepted in the United States (GAAP) have been condensed or omitted pursuant to such rules and regulations. These Condensed Consolidated Financial Statements and Notes to Condensed Consolidated Financial Statements (Notes) should be read in conjunction with, and update and supplement matters discussed in, the Annual Report on Form 10-K for the year ended December 31, 2012 and Quarterly Report on Form 10-Q for the quarter ended March 31, 2013.

The unaudited condensed consolidated financial information furnished herein reflects all adjustments which are, in the opinion of management, necessary to fairly state the results for the interim periods presented. All such adjustments are of a normal recurring nature. All significant intercompany accounts and transactions are eliminated in consolidation, except as discussed in Note 18. Related-Party Transactions. The year-end Condensed Consolidated Balance Sheets were derived from the audited Consolidated Financial Statements included in the Annual Report on Form 10-K for the year ended December 31, 2012.

Note 2. Recent Accounting Standards

New Standards Adopted during 2013

Disclosures about Offsetting Assets and Liabilities

This accounting standard requires enhanced disclosures regarding assets and liabilities that are either offset in the financial statements, or are subject to an enforceable master netting arrangement or similar agreement. The guidance is applicable to certain financial instruments (e.g. derivatives) and securities borrowing and lending transactions. This

standard requires entities:

to disclose information about offsetting and related arrangements to enable users of financial statements to understand the effect of those arrangements on an entity's financial position, and

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

to present both net (offset amounts) and gross information in the notes to the financial statements for relevant assets and liabilities.

We adopted this standard retrospectively effective January 1, 2013. As this standard requires disclosures only, it did not have any impact on our consolidated financial position, results of operations or cash flows. For additional information, see Note 11. Financial Risk Management Activities.

Reclassification Adjustments out of Accumulated Other Comprehensive Income (AOCI)

This accounting standard requires entities to disclose the following information about reclassification adjustments related to AOCI:

changes in AOCI balances by component; and

significant amounts reclassified out of AOCI by respective line items of net income (for amounts that are required by GAAP to be reclassified to net income in their entirety in the same reporting period).

We adopted this standard prospectively effective January 1, 2013. As this standard requires disclosures only, it did not have any impact on our consolidated financial position, results of operations or cash flows. For additional information, see Note 15. Accumulated Other Comprehensive Income (Loss), Net of Tax.

New Accounting Standards Issued But Not Yet Adopted

Presentation of an Unrecognized Tax Benefit When a Net Operating Loss Carryforward, a Similar Tax Loss, or a Tax Credit Carryforward Exists

This accounting standard was issued to address diversity in practice related to the presentation of an unrecognized tax benefit in certain cases. This standard requires entities to present an unrecognized tax benefit or a portion thereof on the Balance Sheet as a reduction to a deferred tax asset for a net operating loss carryforward, a similar tax loss, or a tax credit carryforward.

However, in cases in which a net operating loss carryforward, a similar tax loss or a tax credit carryforward is not available at the reporting date under the tax law of the jurisdiction to settle any additional income taxes that would result from the disallowance of a tax position, or the tax law of the jurisdiction does not require an entity to use, and the entity does not intend to use the deferred tax asset for such purpose, the unrecognized tax benefit will be presented on the Balance Sheet as a liability and will not be combined with deferred tax assets.

The standard is effective for fiscal years and interim periods beginning after December 15, 2013. We are currently analyzing the impact of this standard to our financial statements.

Note 3. Variable Interest Entities (VIEs)

Variable Interest Entities for which PSE&G is the Primary Beneficiary

PSE&G is the primary beneficiary and consolidates two marginally capitalized VIEs, PSE&G Transition Funding LLC (Transition Funding II), which were created for the purpose of issuing transition bonds and purchasing bond transitional property of PSE&G, which is pledged as collateral to a trustee. PSE&G acts as the servicer for these entities to collect securitization transition charges authorized by the BPU. These funds are remitted to Transition Funding and Transition Funding II and are used for interest and principal payments on the transition bonds and related costs.

The assets and liabilities of these VIEs are presented separately on the face of the Condensed Consolidated Balance Sheets of PSEG and PSE&G because the Transition Funding and Transition Funding II assets are restricted and can only be used to settle their respective obligations. No Transition Funding or Transition Funding II creditor has any recourse to the general credit of PSE&G in the event the transition charges are not sufficient to cover the bond principal and interest payments of Transition Funding or Transition Funding II, respectively.

PSE&G's maximum exposure to loss is equal to its equity investment in these VIEs which was \$16 million as of June 30, 2013 and December 31, 2012. The risk of actual loss to PSE&G is considered remote. PSE&G did not provide any financial support to Transition Funding or Transition Funding II during the first six months of 2013 or in

2012. Further, PSE&G does not have any contractual commitments or obligations to provide financial support to Transition Funding or Transition Funding II.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Note 4. Asset Disposition

In June 2013, Energy Holdings closed on the sale of its investments in a commercial office complex for proceeds of \$41 million, resulting in an after-tax gain of \$6 million.

Note 5. Rate Filings

The following information discusses significant updates regarding orders and pending rate filings. This Note should be read in conjunction with Note 6. Regulatory Assets and Liabilities to the Consolidated Financial Statements in the Annual Report on Form 10-K for the year ended December 31, 2012.

Weather Normalization Clause (WNC)—In April 2013, the BPU approved PSE&G's filing with respect to deficiency revenues from the 2011-2012 Winter Period. As a result, provisional rates were approved to recover \$41 million from customers during the 2012-2013 Winter Period, with a carryover deficiency of \$24 million to the 2013-2014 Winter Period. In July 2013, PSE&G filed a petition with the BPU seeking approval to recover \$26 million in revenues from its customers during the 2013-2014 Winter Period inclusive of the \$24 million carryover deficiency.

Solar and Energy Efficiency Recovery Charges (formerly RRC and currently Green Program Recovery Charges (GPRC))—In May 2013, the BPU approved PSE&G's 2012 request for an increase in GPRC to recover approximately \$62 million in additional electric revenue and \$8 million in additional gas revenue, on an annual basis. In June 2013, PSE&G filed a petition with the BPU requesting a decrease in GPRC of approximately \$1 million in electric revenue and \$1 million in gas revenue, on an annual basis for the six Green Programs.

Note 6. Financing Receivables

PSE&G

PSE&G sponsors a solar loan program designed to help finance the installation of solar power systems throughout its electric service area. The loans are generally paid back with Solar Renewable Energy Certificates (SRECs) generated from the installed solar electric system. The following table reflects the outstanding loans by class of customer, none of which are considered "non-performing."

Credit Risk Profile Based on Payment Activity

| | As of | As of |
|-----------------------|----------|--------------|
| Consumant cons | June 30, | December 31, |

| | Millions | |
| Commercial/Industrial | \$188 | \$174 |
| Residential | 16 | 15 |
| Total | \$204 | \$189 |
| | | |

Energy Holdings

Energy Holdings, through various of its indirect subsidiary companies, has investments in domestic energy and real estate assets subject primarily to leveraged lease accounting. A leveraged lease is typically comprised of an investment by an equity investor and debt provided by a third party debt investor. The debt is recourse only to the assets subject to lease and is not included on PSEG's Condensed Consolidated Balance Sheets. As an equity investor, Energy Holdings' investments in the leases are comprised of the total expected lease receivables on its investments over the lease terms plus the estimated residual values at the end of the lease terms, reduced for any income not yet earned on the leases. This amount is included in Long-Term Investments on PSEG's Condensed Consolidated Balance

Sheets. The more rapid depreciation of the leased property for tax purposes creates tax cash flow that will be repaid to the taxing authority in later periods. As such, the liability for such taxes due is recorded in Deferred Income Taxes on PSEG's Condensed Consolidated Balance Sheets.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The table below shows Energy Holdings' gross and net lease investment as of June 30, 2013 and December 31, 2012, respectively.

| | As of | | As of | |
|--|----------|---|--------------|---|
| | June 30, | | December 31, | |
| | 2013 | | 2012 | |
| | Millions | | | |
| Lease Receivables (net of Non-Recourse Debt) | \$705 | | \$721 | |
| Estimated Residual Value of Leased Assets | 529 | | 535 | |
| | 1,234 | | 1,256 | |
| Unearned and Deferred Income | (409 |) | (416 |) |
| Gross Investments in Leases | 825 | | 840 | |
| Deferred Tax Liabilities | (687 |) | (723 |) |
| Net Investments in Leases | \$138 | | \$117 | |

The corresponding receivables associated with the lease portfolio are reflected below, net of non-recourse debt. The ratings in the table represent the ratings of the entities providing payment assurance to Energy Holdings. "Not Rated" counterparties represent investments in lease receivables related to coal-fired assets and commercial real estate properties.

| Lease Receivables, Net of | | | |
|---------------------------|---|--|--|
| Non-Recourse Debt | | | |
| As of | As of | | |
| June 30, 2013 | December 31, 2012 | | |
| Millions | | | |
| \$20 | \$21 | | |
| 58 | 73 | | |
| 316 | 316 | | |
| 166 | 166 | | |
| 145 | 145 | | |
| \$705 | \$721 | | |
| | Non-Recourse As of June 30, 2013 Millions \$20 58 316 166 145 | | |

The "B" rating and the "Not Rated" above include lease receivables related to coal-fired assets in Pennsylvania and Illinois, respectively. As of June 30, 2013, the gross investment in the leases of such assets, net of non-recourse debt, was \$561 million (\$40 million, net of deferred taxes). A more detailed description of such assets under lease is presented in the following table.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

| Asset | Location | Gross Investment | % Owned | 1 | Total | Fuel Type | Counter-parties' S&P Credit Ratings | Counterparty |
|--|----------|---------------------|------------|---|-------|--------------|-------------------------------------|-----------------------|
| | | Millions | | | MW | | C | |

| Joliet Station Units 7 and 8 | IL | \$84 | 64 | % | 1,044 | Coal | Not Rated | Edison Mission Energy |
| Keystone Station Units 1 and 2 | PA | \$116 | 17 | % | 1,711 | Coal | В | GenOn REMA, LLC |
| Conemaugh Station Units 1 and 2 | PA | \$117 | 17 | % | 1,711 | Coal | В | GenOn REMA, LLC |
| Shawville Station Units 1, 2, 3 and 4 | PA | \$110 | 100 | % | 603 | Coal | В | GenOn REMA, LLC |

The credit exposure for lessors is partially mitigated through various credit enhancement mechanisms within the lease transactions. These credit enhancement features vary from lease to lease and may include letters of credit or affiliate guarantees. Upon the occurrence of certain defaults, indirect subsidiary companies of Energy Holdings would exercise their rights and attempt to seek recovery of their investment, potentially including stepping into the lease directly to protect their investments. While these actions could ultimately protect or mitigate the loss of value, they could require the use of significant capital investments and trigger certain material tax obligations. A bankruptcy of a lessee would likely delay any efforts on the part of the lessors to assert their rights upon default and could delay the monetization of claims. Failure to recover adequate value could ultimately lead to a foreclosure on the assets under lease by the lenders. If foreclosures were to occur, Energy Holdings could potentially record a pre-tax write-off up to its gross investment in these facilities and may also be required to pay significant cash tax liabilities to the Internal Revenue Service (IRS).

Indirect subsidiary companies of Energy Holdings lease three coal-fired generation facilities in Pennsylvania (Keystone, Conemaugh and Shawville) to GenOn REMA, LLC (GenOn REMA), a subsidiary of GenOn Energy Inc. (GenOn), which was acquired by NRG Energy, Inc. in December 2012. With respect to addressing various environmental controls: Keystone has installed a flue gas desulfurization (FGD) system for sulfur dioxide (SO₂), selective catalytic reduction (SCR) equipment for nitrogen oxide (NOx) and mercury control; Conemaugh has a FGD system, while SCR and mercury control equipment are scheduled to be installed and operational by the first quarter of 2015; and GenOn has disclosed its plan to place Shawville in a "long-term protective layup" by April 2015. GenOn has stated that it is evaluating whether to continue to pay the required rent and maintain the facility in accordance with the lease terms or terminate the lease for obsolescence in which case the lessee would be required, among other things, to pay the contractual termination value structured to recover Energy Holdings' indirect subsidiaries' lease investment as specified in the lease agreement.

Although all lease payments from the GenOn REMA leases are current, no assurances can be given that future payments in accordance with the lease contracts will continue. Factors which may impact future lease cash flows include, but are not limited to, new environmental legislation and regulation regarding air quality, water and other discharges in the process of generating electricity, market prices for fuel, electricity and capacity, overall financial condition of lease counterparties and the quality and condition of assets under lease.

Nesbitt Asset Recovery, LLC (Nesbitt), (an indirect, wholly owned subsidiary of Energy Holdings), owns approximately 64% of the lease interest in the Powerton and Joliet coal units in Illinois, with the balance held by Associates Capital Investments, L.L.P. (Associates) (an affiliate of Citigroup, and, together with Nesbitt, the "Owner

Participants"). These facilities are leased to Midwest Generation (MWG), an indirect subsidiary of Edison Mission Energy (EME).

On December 17, 2012, EME and MWG filed for relief under Chapter 11 of the U.S. Bankruptcy Code. Immediately prior to that filing, EME, MWG and the Owner Participants, as well as certain affiliated owner lessors, entered into a forbearance agreement with holders of a majority of the lease debt that financed the original sale-leaseback transaction. The forbearance agreement, which was approved by the bankruptcy court, expired on April 5, 2013. In June 2013, the parties reached an agreement, which was approved by the Bankruptcy Court, to again extend the deadline for MWG to assume or reject the leases until September 30, 2013. As part of this settlement, (i) MWG will make partial lease payments of \$4 million each month during the extension period starting in July 2013, (ii) the unpaid rent for the utilization of the facilities by MWG during pendency of the bankruptcy will be treated as an administrative expense in bankruptcy and (iii) the parties agree to not reject

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

the leases or foreclose on assets under lease during the extension period. Nesbitt is actively involved in the bankruptcy proceedings and continues to evaluate its options with respect to this lease.

MWG has substantially completed investments in mercury removal (Activated Carbon Injection) and NOx emission controls (low NOx burners and Selective Non-Catalytic Reduction systems), and plans to invest in SO₂ emission controls (Dry Sorbent Injection (Trona) systems). On April 4, 2013, MWG obtained approval from the Illinois Pollution Control Board to defer capital investments for up to two additional years to meet upcoming air emission compliance deadlines under Illinois law. Also, on July 8, 2013, the US Court of Appeals affirmed the judgment of the lower court dismissing claims brought by the U.S. Environmental Protection Agency (EPA) and the State of Illinois against EME and MWG for alleged violations of the Clean Air Act.

Note 7. Available-for-Sale Securities

Nuclear Decommissioning Trust (NDT) Fund

Total NDT Available-for-Sale Securities

Power maintains an external master nuclear decommissioning trust to fund its share of decommissioning for its five nuclear facilities upon termination of operation. The trust contains two separate funds: a qualified fund and a non-qualified fund. Section 468A of the Internal Revenue Code limits the amount of money that can be contributed into a qualified fund. The trust funds are managed by third-party investment advisers who operate under investment guidelines developed by Power.

Power classifies investments in the NDT Fund as available-for-sale. The following tables show the fair values and gross unrealized gains and losses for the securities held in the NDT Fund:

As of June 30, 2013

| | As 01 June 30, 2013 | | | | |
|---|-------------------------|------------|------------|---|---------------|

| NDT Available-for-Sale Securities | \$502 | \$(21 |) | \$3 | \$ | \$204 | \$(6 |) \$7 | \$ — |

Equity Securities—Investments in marketable equity securities within the NDT Fund are primarily in common stocks within a broad range of industries and sectors. The unrealized losses are distributed over a broad range of

securities with limited impairment durations. Power does not consider these securities to be other-than-temporarily impaired as of June 30, 2013.

Debt Securities (Government)—Unrealized losses on Power's NDT investments in United States Treasury obligations and Federal Agency asset-backed securities were caused by interest rate changes. Since these investments are guaranteed by the United States government or an agency of the United States government, it is not expected that

(B) guaranteed by the United States government or an agency of the United States government, it is not expected that these securities will settle for less than their amortized cost basis, since Power does not intend to sell nor will it be more-likely-than-not required to sell. Power does not consider these securities to be other-than-temporarily impaired as of June 30, 2013.

Debt Securities (Corporate)—Power's investments in corporate bonds are limited to investment grade securities. It is not expected that these securities would settle for less than their amortized cost. Since Power does not intend to sell these securities nor will it be more-likely-than-not required to sell, Power does not consider these debt securities to be other-than-temporarily impaired as of June 30, 2013.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The proceeds from the sales of and the net realized gains on securities in the NDT Fund were:

| | Three Months Ended | | nded | Six Months Ended | | ed | | |
|--|--------------------|---|-------|------------------|----------|----|-------|---|
| | June 30, | | | | June 30, | | | |
| | 2013 | | 2012 | | 2013 | | 2012 | |
| | Millions | | | | | | | |
| Proceeds from NDT Fund Sales | \$376 | | \$290 | | \$617 | | \$635 | |
| Net Realized Gains (Losses) on NDT | | | | | | | | |
| Fund: | | | | | | | | |
| Gross Realized Gains | 23 | | 26 | | 60 | | 42 | |
| Gross Realized Losses | (6 |) | (16 |) | (25 |) | (22 |) |
| Net Realized Gains (Losses) on NDT Fur | nd\$17 | | \$10 | | \$35 | | \$20 | |

Gross realized gains and gross realized losses disclosed in the above table were recognized in Other Income and Other Deductions, respectively, in PSEG's and Power's Condensed Consolidated Statements of Operations. Net unrealized gains of \$97 million (after-tax) were a component of Accumulated Other Comprehensive Loss on PSEG's and Power's Condensed Consolidated Balance Sheet as of June 30, 2013.

The NDT available-for-sale debt securities held as of June 30, 2013 had the following maturities:

| Time Frame | Fair Value |
|--|------------|
| | Millions |
| Less than one year | \$58 |
| 1 - 5 years | 171 |
| 6 - 10 years | 191 |
| 11 - 15 years | 39 |
| 16 - 20 years | 9 |
| Over 20 years | 235 |
| Total NDT Available-for-Sale Debt Securities | \$703 |

The cost of these securities was determined on the basis of specific identification.

Power periodically assesses individual securities whose fair value is less than amortized cost to determine whether the investments are considered to be other-than-temporarily impaired. For equity securities, management considers the ability and intent to hold for a reasonable time to permit recovery in addition to the severity and duration of the loss. For fixed income securities, management considers its intent to sell or requirement to sell a security prior to expected recovery. In those cases where a sale is expected, any impairment would be recorded through earnings. For fixed income securities where there is no intent to sell or likely requirement to sell, management evaluates whether credit loss is a component of the impairment. If so, that portion is recorded through earnings while the noncredit loss component is recorded through Accumulated Other Comprehensive Income (Loss). In 2013, other-than-temporary impairments of \$4 million were recognized on securities in the NDT Fund. Any subsequent recoveries in the value of these securities would be recognized in Accumulated Other Comprehensive Income (Loss) unless the securities are sold, in which case, any gain would be recognized in income. The assessment of fair market value compared to cost is applied on a weighted average basis taking into account various purchase dates and initial cost of the securities. Rabbi Trust

PSEG maintains certain unfunded nonqualified benefit plans to provide supplemental retirement and deferred compensation benefits to certain key employees. Certain assets related to these plans have been set aside in a grantor

trust commonly known as the "Rabbi Trust."

PSEG classifies investments in the Rabbi Trust as available-for-sale. The following tables show the fair values, gross unrealized gains and losses and amortized cost basis for the securities held in the Rabbi Trust.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

| | As of June 30 | | | | |
|---|---------------|------------------------------|-------------------------------|---|---------------|
| | Cost | Gross Unrealized Gains | Gross Unrealized Losses | | Fair Value |

| Government Obligations | 114 | 3 | | 117 | |
| Other Debt Securities | 45 | 2 | | 47 | |
| Total Debt Securities | 159 | 5 | _ | 164 | |
| Other Securities | 3 | | _ | 3 | |
| Total Rabbi Trust Available-for-Sale Securities | \$175 | \$10 | \$ — | \$185 | |

These amounts in the preceding tables do not include receivables and payables for Rabbi Trust Fund transactions which have not settled at the end of each period. Such amounts are included in Accounts Receivable and Accounts Payable on the Condensed Consolidated Balance Sheets as shown in the following table.

| | As of | As of |
|---------------------|---------------|-------------------|
| | June 30, 2013 | December 31, 2012 |
| | Millions | |
| Accounts Receivable | \$4 | \$4 |
| Accounts Payable | \$3 | \$5 |

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

In March 2012, PSEG restructured the fixed income component of the Rabbi Trust. The proceeds from the sales of and the net realized gains on securities in the Rabbi Trust Fund were:

| | Three Months Ended June 30, | | Six Months Ended June 30, | | |
|---|-----------------------------|------|---------------------------|-------|--|
| | 2013 | 2012 | 2013 | 2012 | |
| | Millions | | | | |
| Proceeds from Rabbi Trust Sales | \$47 | \$61 | \$64 | \$215 | |
| Net Realized Gains (Losses) on Rabbi Trust: | | | | | |
| Gross Realized Gains | \$4 | \$1 | \$4 | \$6 | |
| Gross Realized Losses | (3 |) — | (3 |) — | |
| Net Realized Gains (Losses) on Rabbi Trust | \$1 | \$1 | \$1 | \$6 | |

Gross realized gains and gross realized losses disclosed in the above table were recognized in Other Income and Other Deductions, respectively, in the Condensed Consolidated Statements of Operations. Net unrealized gains of \$4 million (after-tax) were a component of Accumulated Other Comprehensive Loss on the Condensed Consolidated Balance Sheets as of June 30, 2013. The Rabbi Trust available-for-sale debt securities held as of June 30, 2013 had the following maturities:

| Time Frame | Fair Value |
|--|------------|
| | Millions |
| Less than one year | \$ |
| 1 - 5 years | 59 |
| 6 - 10 years | 28 |
| 11 - 15 years | 8 |
| 16 - 20 years | 5 |
| Over 20 years | 54 |
| Total Rabbi Trust Available-for-Sale Debt Securities | \$154 |
| | |

The cost of these securities was determined on the basis of specific identification.

PSEG periodically assesses individual securities whose fair value is less than amortized cost to determine whether the investments are considered to be other-than-temporarily impaired. For equity securities, the Rabbi Trust is invested in a commingled indexed mutual fund. Due to the commingled nature of this fund, PSEG does not have the ability to hold these securities until expected recovery. As a result, any declines in fair market value below cost are recorded as a charge to earnings. For fixed income securities, management considers its intent to sell or requirement to sell a security prior to expected recovery. In those cases where a sale is expected, any impairment would be recorded through earnings. For fixed income securities where there is no intent to sell or likely requirement to sell, management evaluates whether credit loss is a component of the impairment. If so, that portion is recorded through earnings while the noncredit loss component is recorded through Accumulated Other Comprehensive Income (Loss). The assessment of fair market value compared to cost is applied on a weighted average basis taking into account various purchase dates and initial cost of the securities.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The fair value of assets in the Rabbi Trust related to PSEG, Power and PSE&G are detailed as follows:

| | As of | As of |
|---|---------------|-------------------|
| | June 30, 2013 | December 31, 2012 |
| | Millions | |
| Power | \$38 | \$36 |
| PSE&G | 42 | 61 |
| Other | 97 | 88 |
| Total Rabbi Trust Available-for-Sale Securities | \$177 | \$185 |

Note 8. Pension and Other Postretirement Benefits (OPEB)

PSEG sponsors several qualified and nonqualified pension plans and OPEB plans covering PSEG's and its participating affiliates' current and former employees who meet certain eligibility criteria. The following table provides the components of net periodic benefit costs relating to all qualified and nonqualified pension and OPEB plans on an aggregate basis.

Pension and OPEB costs for PSEG are detailed as follows:

| | Pension | Benefits | OPEB | | Pensi | on Benefits | OPEB | |

| Total Benefit Costs | \$38 | \$41 | \$23 | \$25 | \$76 | \$83 | \$46 | \$51 | |

During the three months ended March 31, 2013, PSEG contributed its entire planned contributions for the year 2013 of \$145 million and \$14 million into its pension and postretirement healthcare plans, respectively.

Note 9. Commitments and Contingent Liabilities

Guaranteed Obligations

Power's activities primarily involve the purchase and sale of energy and related products under transportation, physical, financial and forward contracts at fixed and variable prices. These transactions are with numerous counterparties and brokers that may require cash, cash-related instruments or guarantees.

Power has unconditionally guaranteed payments to counterparties by its subsidiaries in commodity-related transactions in order to

support current exposure, interest and other costs on sums due and payable in the ordinary course of business, and obtain credit.

Under these agreements, guarantees cover lines of credit between entities and are often reciprocal in nature. The exposure between counterparties can move in either direction.

In order for Power to incur a liability for the face value of the outstanding guarantees, its subsidiaries would have to fully utilize the credit granted to them by every counterparty to whom Power has provided a guarantee, and all of the related contracts would have to be "out-of-the-money" (if the contracts are terminated, Power would owe money to the counterparties).

Power believes the probability of this result is unlikely. For this reason, Power believes that the current exposure at any point in time is a more meaningful representation of the potential liability under these guarantees. This current exposure consists of the net of accounts receivable and accounts payable and the forward value on open positions, less any collateral posted.

Power is subject to

counterparty collateral calls related to commodity contracts, and

certain creditworthiness standards as guarantor under performance guarantees of its subsidiaries.

Changes in commodity prices can have a material impact on collateral requirements under such contracts, which are posted and received primarily in the form of cash and letters of credit. Power also routinely enters into futures and options transactions for electricity and natural gas as part of its operations. These futures contracts usually require a cash margin deposit with brokers, which can change based on market movement and in accordance with exchange rules.

In addition to the guarantees discussed above, Power has also provided payment guarantees to third parties on behalf of its affiliated companies. These guarantees support various other non-commodity related contractual obligations.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The face value of Power's outstanding guarantees, current exposure and margin positions as of June 30, 2013 and December 31, 2012 are shown below:

| June 30, December 31, 2013 2012 Millions Face Value of Outstanding Guarantees \$1,569 \$1,508 Exposure under Current Guarantees \$282 \$226 Letters of Credit Margin Posted \$113 \$124 Letters of Credit Margin Received \$38 \$69 Cash Deposited and Received |
|---|
| Face Value of Outstanding Guarantees \$1,569 \$1,508 Exposure under Current Guarantees \$282 \$226 Letters of Credit Margin Posted \$113 \$124 Letters of Credit Margin Received \$38 \$69 |
| Face Value of Outstanding Guarantees \$1,569 \$1,508 Exposure under Current Guarantees \$282 \$226 Letters of Credit Margin Posted \$113 \$124 Letters of Credit Margin Received \$38 \$69 |
| Exposure under Current Guarantees\$282\$226Letters of Credit Margin Posted\$113\$124Letters of Credit Margin Received\$38\$69 |
| Letters of Credit Margin Posted \$113 \$124 Letters of Credit Margin Received \$38 \$69 |
| Letters of Credit Margin Received \$38 \$69 |
| |
| Cash Deposited and Received |
| |
| Counterparty Cash Margin Deposited \$4 \$15 |
| Counterparty Cash Margin Received \$— \$(4) |
| Net Broker Balance Deposited (Received) \$41 \$26 |
| In the Event Power were to Lose its Investment Grade Rating: |
| Additional Collateral that Could be Required \$679 \$654 |
| Liquidity Available under PSEG's and Power's Credit Facilities to Post \$3,541 \$3,531 |
| Collateral |
| Additional Amounts Posted |
| Other Letters of Credit \$46 \$45 |

As part of determining credit exposure, Power nets receivables and payables with the corresponding net energy contract balances. See Note 11. Financial Risk Management Activities for further discussion. In accordance with PSEG's accounting policy, where it is applicable, cash (received)/deposited is allocated against derivative asset and liability positions with the same counterparty on the face of the Balance Sheet. The remaining balances of net cash (received)/deposited after allocation are generally included in Accounts Payable and Receivable, respectively. In the event of a deterioration of Power's credit rating to below investment grade, which would represent a three level downgrade from its current S&P's, Moody's and Fitch ratings, many of these agreements allow the counterparty to demand further performance assurance. See table above.

The SEC and the Commodity Futures Trading Commission (CFTC) continue efforts to implement new rules to effect stricter regulation over swaps and derivatives. In 2012, the CFTC issued Final Rules regarding the definition of a swap dealer and the definition of a swap, and established reporting and record-keeping requirements for commercial end users including PSEG. In September 2012, a federal court vacated the CFTC's rule on monitoring of position limits for several commodities, including natural gas, thereby indefinitely delaying the effectiveness of these position limits rules. PSEG is carefully monitoring all of these new rules as they are issued to analyze the potential impact on its swap and derivatives transactions, including any potential increase in its collateral requirements.

In addition to amounts for outstanding guarantees, current exposure and margin positions, Power had posted letters of credit to support various other non-energy contractual and environmental obligations. See table above.

Environmental Matters

Passaic River

Historic operations of PSEG companies and the operations of hundreds of other companies along the Passaic and Hackensack Rivers are alleged by Federal and State agencies to have discharged substantial contamination into the Passaic River/Newark Bay Complex.

Federal Comprehensive Environmental Response, Compensation and Liability Act of 1980 (CERCLA)

The EPA has determined that an eight-mile stretch of the Passaic River in the area of Newark, New Jersey is a "facility" within the meaning of that term under CERCLA. The EPA has determined the need to perform a study of the entire 17-mile tidal reach of the lower Passaic River.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

PSE&G and certain of its predecessors conducted operations at properties in this area on or adjacent to the Passaic River. The properties included one operating electric generating station (Essex Site), which was transferred to Power, one former generating station and four former manufactured gas plant (MGP) sites. When the Essex Site was transferred from PSE&G to Power, PSE&G obtained releases and indemnities for liabilities arising out of the former Essex generating station and Power assumed any environmental liabilities.

The EPA notified the potentially responsible parties (PRPs) that the cost of its Remedial Investigation and Feasibility Study (RI/FS) is now estimated at approximately \$110 million. Seventy-three PRPs, including Power and PSE&G, agreed to assume responsibility for the RI/FS and formed the Cooperating Parties Group (CPG) to divide the associated costs according to a mutually agreed upon formula. The CPG group, currently seventy members, is presently executing the RI/FS. Approximately five percent of the RI/FS costs were attributable to PSE&G's former MGP sites and approximately one percent to Power's generating stations on an interim basis under the CPG's group agreement. Power has provided notice to insurers concerning this potential claim.

In 2007, the EPA released a draft "Focused Feasibility Study" (FFS) that proposed various options to address the contamination cleanup of the lower eight miles of the Passaic River. The EPA estimated costs for the proposed remedy range from \$1.3 billion to \$3.7 billion. The work contemplated by the FFS is not subject to the cost sharing agreement discussed above. The EPA's revised proposed FFS may be released for public comment as early as the fourth quarter of 2013.

In June 2008, an agreement was announced between the EPA and Tierra Solutions, Inc. and Maxus Energy Corporation (Tierra/Maxus) for removal of a portion of the contaminated sediment in the Passaic River at an estimated cost of \$80 million. Phase I of the removal work has been completed. Phase II is contingent on the approval of an appropriate sediment disposal facility. Tierra/Maxus have reserved their rights to seek contribution for the removal costs from the other PRPs, including Power and PSE&G.

The EPA has advised that the levels of contaminants at Passaic River mile 10.9 will require removal in advance of the completion of the RI/FS. The CPG members, with the exception of Tierra/Maxus, which are no longer members, have agreed to fund the removal, currently estimated at approximately \$30 million. PSEG's share of that effort is approximately three percent.

Except for the Passaic River mile 10.9 removal, Power and PSE&G are unable to estimate their portion of the possible loss or range of loss related to the Passaic River matters.

New Jersey Spill Compensation and Control Act (Spill Act)

In 2005, the New Jersey Department of Environmental Protection (NJDEP) filed suit against a PRP (Occidental Chemical Corporation (OCC)) and its related companies in the New Jersey Superior Court seeking damages and reimbursement for costs expended by the State of New Jersey to address the effects of the PRP's discharge of hazardous substances into both the Passaic River and the balance of the Newark Bay Complex. Power and PSE&G are alleged to have owned, operated or contributed hazardous substances to a total of 11 sites or facilities that impacted these water bodies. In 2009, third party complaints were filed against some 320 third party defendants, including Power and PSE&G, claiming that each of the third party defendants is responsible for its proportionate share of the clean-up costs for the hazardous substances it allegedly discharged into the Passaic River and the Newark Bay Complex. Power and PSE&G filed answers to the complaints in 2010. On March 22, 2013, Power and PSE&G signed an agreement to settle the NJDEP vs. OCC litigation at a nominal cost. That settlement is contingent upon a public comment and NJDEP response period and the issuance of an order approving the settlement by the Court after conducting a fairness hearing. A stay of third-party discovery remains in place and has been extended. Power and PSE&G believe they have good and valid defenses to the allegations contained in the third party complaints and will vigorously assert those defenses should the matter not settle. Power and PSE&G are unable to estimate their portion of the possible loss or range of loss related to this matter.

Natural Resource Damage Claims

In 2003, the NJDEP directed PSEG, PSE&G and 56 other PRPs to arrange for a natural resource damage assessment and interim compensatory restoration of natural resource injuries along the lower Passaic River and its tributaries pursuant to the Spill Act. The NJDEP alleged that hazardous substances had been discharged from the Essex Site and the Harrison Site. The NJDEP estimated the cost of interim natural resource injury restoration activities along the lower Passaic River at approximately \$950 million. In 2007, agencies of the United States Department of Commerce and the United States Department of the Interior sent letters to PSE&G and other PRPs inviting participation in an assessment of injuries to natural resources that the agencies intended to perform. In 2008, PSEG and a number of other PRPs agreed to share certain immaterial costs the trustees have incurred and will incur going forward and to work with the trustees to explore whether some or all of the trustees' claims can be resolved in a cooperative fashion. That effort is continuing. PSEG is unable to estimate its portion of the possible loss or range of loss related to this matter.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Newark Bay Study Area

The EPA has established the Newark Bay Study Area, which it defines as Newark Bay and portions of the Hackensack River, the Arthur Kill and the Kill Van Kull. In 2006, the EPA sent PSEG and 11 other entities notices that it considered each of the entities to be a PRP with respect to contamination in the Study Area. The notice letter requested that the PRPs fund an EPA-approved study in the Newark Bay Study Area and encouraged the PRPs to contact OCC to discuss participating in the RI/FS that OCC was conducting. The notice stated the EPA's belief that hazardous substances were released from sites owned by PSEG companies and located on the Hackensack River, including two operating electric generating stations (Hudson and Kearny sites) and one former MGP site. PSEG has participated in and partially funded the second phase of this study. Notices to fund the next phase of the study have been received but it is uncertain at this time whether the PSEG companies will consent to fund the third phase. Power and PSE&G are unable to estimate their portion of the possible loss or range of loss related to this matter.

MGP Remediation Program

PSE&G is working with the NJDEP to assess, investigate and remediate environmental conditions at its former MGP sites. To date, 38 sites requiring some level of remedial action have been identified. Based on its current studies, PSE&G has determined that the estimated cost to remediate all MGP sites to completion could range between \$491 million and \$578 million through 2021. Since no amount within the range is considered to be most likely, PSE&G has recorded a liability of \$491 million as of June 30, 2013. Of this amount, \$104 million was recorded in Other Current Liabilities and \$387 million was reflected as Environmental Costs in Noncurrent Liabilities. PSE&G has recorded a \$491 million Regulatory Asset with respect to these costs. PSE&G periodically updates its studies taking into account any new regulations or new information which could impact future remediation costs and adjusts its recorded liability accordingly.

Prevention of Significant Deterioration (PSD)/New Source Review (NSR)

The PSD/NSR regulations, promulgated under the Clean Air Act (CAA), require major sources of certain air pollutants to obtain permits, install pollution control technology and obtain offsets, in some circumstances, when those sources undergo a "major modification," as defined in the regulations. The federal government may order companies that are not in compliance with the PSD/NSR regulations to install the best available control technology at the affected plants and to pay monetary penalties ranging from \$25,000 to \$37,500 per day for each violation, depending upon when the alleged violation occurred.

In 2009, the EPA issued a notice of violation to Power and the other owners of the Keystone coal-fired plant in Pennsylvania, alleging, among other things, that various capital improvement projects were completed at the plant which are considered modifications (or major modifications) causing significant net emission increases of PSD/NSR air pollutants, beginning in 1985 for Keystone Unit 1 and in 1984 for Keystone Unit 2. The notice of violation states that none of these modifications underwent PSD/NSR permitting process prior to being put into service, which the EPA alleges was required under the CAA. The notice of violation states that the EPA may issue an order requiring compliance with the relevant CAA provisions and may seek injunctive relief and/or civil penalties. Power owns approximately 23% of the plant. Power cannot predict the outcome of this matter.

Hazardous Air Pollutants Regulation

In accordance with a ruling of the U.S. Court of Appeals of the District of Columbia (Court of Appeals), the EPA published a Maximum Achievable Control Technology (MACT) regulation in February 2012. These Mercury Air Toxics Standards (MATS) are scheduled to go into effect on April 16, 2015 and establish allowable emission levels for mercury as well as other hazardous air pollutants pursuant to the CAA. In February 2012, members of the electric generating industry filed a petition challenging the existing source National Emission Standard for Hazardous Air Pollutants (NESHAP), new source NESHAP and the New Source Performance Standard (NSPS). In March 2012, PSEG filed a motion to intervene with the Court of Appeals in support of the EPA's implementation of MATS. Litigation of these matters remains pending and the impact on the implementation schedule is unknown at this time.

Power believes that it will not be necessary to install any additional material controls at its New Jersey facilities. Additional controls may be necessary at Power's Bridgeport Harbor coal-fired unit at an immaterial cost. In December 2011, to comply with the MACT regulations, a decision was reached to upgrade the previously planned two flue gas desulfurization scrubbers and install Selective Catalytic Reduction (SCR) systems at Power's jointly owned coal-fired generating facility at Conemaugh in Pennsylvania. This installation is expected to be completed in the first quarter of 2015. Power's share of this investment is approximately \$147 million.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

NOx Regulation

regulations.

In April 2009, the NJDEP finalized revisions to NO_x emission control regulations that impose new NO_x emission reduction requirements and limits for New Jersey fossil fuel-fired electric generation units. The rule has an impact on Power's generation fleet, as it imposes NQ emissions limits that will require capital investment for controls or the retirement of up to 86 combustion turbines (approximately 1,750 MW) and four older New Jersey steam electric generation units (approximately 400 MW) by May 30, 2015. Retirement notifications for the combustion turbines, except for Salem Unit 3, have been filed with the PJM Interconnection, LLC (PJM). The Salem Unit 3 combustion turbine (38 MW) will be transitioning to an emergency generator. Evaluations are ongoing for the steam electric generation units.

Under current Connecticut regulations, Power's Bridgeport and New Haven facilities have been utilizing Discrete Emission Reduction Credits (DERCs) to comply with certain NO_x emission limitations that were incorporated into the facilities' operating permits. In 2010, Power negotiated new agreements with the State of Connecticut extending the continued use of DERCs for certain emission units and equipment until May 31, 2014.

Clean Water Act Permit Renewals

Pursuant to the Federal Water Pollution Control Act (FWPCA), National Pollutant Discharge Elimination System (NPDES) permits expire within five years of their effective date. In order to renew these permits, but allow a plant to continue to operate, an owner or operator must file a permit application no later than six months prior to expiration of the permit. States with delegated federal authority for this program manage these permits. The NJDEP manages the permits under the New Jersey Pollutant Discharge Elimination System (NJPDES) program. Connecticut and New York also have permits to manage their respective pollutant discharge elimination system programs.

One of the most significant NJPDES permits governing cooling water intake structures at Power is for Salem. In 2001, the NJDEP issued a renewed NJPDES permit for Salem, expiring in July 2006, allowing for the continued operation of Salem with its existing cooling water intake system. In 2006, Power filed with the NJDEP a renewal application allowing Salem to continue operating under its existing NJPDES permit until a new permit is issued. Power prepared its renewal application in accordance with the FWPCA Section 316(b) and the 316(b) rules published in 2004.

As a result of several legal challenges to the 2004 316(b) rule by certain northeast states, environmentalists and industry groups, the rule has been suspended and has been returned to the EPA to be consistent with a 2009 United

In late 2010, the EPA entered into a settlement agreement with environmental groups that established a schedule to develop a new 316(b) rule by July 27, 2012. In April 2011, the EPA published a proposed rule to establish marine life mortality standards for existing cooling water intake structures with a design flow of more than two million gallons per day. In July 2012, the EPA and environmental groups agreed to delay the deadline to June 27, 2013 for finalization of the Rule. On June 27, 2013, the EPA and environmental groups agreed to further extend the deadline to November 4, 2013.

States Supreme Court decision which concluded that the EPA could rely upon cost-benefit analysis in setting the national performance standards and in providing for cost-benefit variances from those standards as part of the Phase II

Power is unable to predict the outcome of this proposed rulemaking, the final form that the proposed regulations may take and the effect, if any, that they may have on its future capital requirements, financial condition, results of operations or cash flows. The results of further proceedings on this matter could have a material impact on Power's ability to renew permits at its larger once-through cooled plants, including Salem, Hudson, Mercer, Bridgeport and possibly Sewaren and New Haven, without making significant upgrades to existing intake structures and cooling systems. The costs of those upgrades to one or more of Power's once-through cooled plants would be material, and would require economic review to determine whether to continue operations at these facilities. For example, in Power's application to renew its Salem permit, filed with the NJDEP in February 2006, the estimated costs for adding cooling towers for Salem were approximately \$1 billion, of which Power's share would have been approximately \$575 million. These cost estimates have not been updated. Currently, potential costs associated with any closed cycle

cooling requirements are not included in Power's forecasted capital expenditures.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Capital Expenditures

The construction programs of PSEG and its subsidiaries are currently estimated to include a base level total investment of approximately \$6.4 billion for the three years ended 2015. The three-year projected capital expenditures for PSEG, Power and PSE&G are as follows:

| | 2013 | 2014 | 2015 |
|------------|----------|---------|---------|
| | Millions | | |
| Power | \$400 | \$365 | \$305 |
| PSE&G | 2,045 | 1,765 | 1,305 |
| Other | 95 | 40 | 30 |
| Total PSEG | \$ 2,540 | \$2,170 | \$1,640 |

Power's projected capital expenditures include baseline maintenance (investments to replace major parts and enhance operational performance), investments in response to environmental, regulatory or legal mandates and nuclear expansion. PSE&G's projections include material additions and replacements in its transmission and distribution systems to meet expected growth and manage reliability.

In May 2013, the BPU approved increased spending on renewable energy under PSE&G's Solar Loan and Solar 4 All investment programs (Solar Loan III and Solar 4 All Extension, respectively). PSE&G's projected expenditures through 2015 in the table above have been updated to include \$215 million under its Solar Loan III and Solar 4 All Extension programs.

Power

During the six months ended June 30, 2013, Power made \$171 million of capital expenditures, including interest capitalized during construction (IDC) but excluding \$51 million for nuclear fuel, primarily related to various projects at its fossil and nuclear generation stations.

PSE&G

During the six months ended June 30, 2013, PSE&G made \$1,167 million of capital expenditures, including \$1,148 million of investment in plant, primarily for reliability of transmission and distribution systems and \$19 million in solar loan investments. This does not include expenditures for cost of removal, net of salvage, of \$46 million, which is included in operating cash flows.

Energy Holdings

Included in Other for 2013 in the preceding table is a 19 MW solar project currently under construction in Arizona for which Energy Holdings had issued an outstanding guarantee of \$20 million as of June 30, 2013.

Basic Generation Service (BGS) and Basic Gas Supply Service (BGSS)

PSE&G obtains its electric supply requirements for customers who do not purchase electric supply from third party suppliers through the annual New Jersey BGS auctions. Pursuant to applicable BPU rules, PSE&G enters into the Supplier Master Agreement with the winners of these BGS auctions following the BPU's approval of the auction results. PSE&G has entered into contracts with Power, as well as with other winning BGS suppliers, to purchase BGS for PSE&G's load requirements. The winners of the auction (including Power) are responsible for fulfilling all the requirements of a PJM Load Serving Entity including the provision of capacity, energy, ancillary services, transmission and any other services required by PJM. BGS suppliers assume all volume risk and customer migration risk and must satisfy New Jersey's renewable portfolio standards.

Power seeks to mitigate volatility in its results by contracting in advance for the sale of most of its anticipated electric output as well as its anticipated fuel needs. As part of its objective, Power has entered into contracts to directly supply PSE&G and other New Jersey electric distribution companies (EDCs) with a portion of their respective BGS requirements through the New Jersey BGS auction process, described above.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

PSE&G has contracted for its anticipated BGS-Fixed Price eligible load, as follows:

| | Auction Yea | Auction Year | | | | | | | | |
|-----------------------|-------------|--------------|----------|----------|-----|--|--|--|--|--|
| | 2010 | 2011 | 2012 | 2013 | | | | | | |
| 36-Month Terms Ending | May 2013 | May 2014 | May 2015 | May 2016 | (A) | | | | | |
| Load (MW) | 2,800 | 2,800 | 2,900 | 2,800 | | | | | | |
| \$ per kWh | 0.09577 | 0.09430 | 0.08388 | 0.09218 | | | | | | |

(A) Prices set in the 2013 BGS auction became effective on June 1, 2013 when the 2010 BGS auction agreements expired.

PSE&G has a full requirements contract with Power to meet the gas supply requirements of PSE&G's gas customers. Power has entered into hedges for a portion of these anticipated BGSS obligations, as permitted by the BPU. The BPU permits PSE&G to recover the cost of gas hedging up to 115 billion cubic feet or 80% of its residential gas supply annual requirements through the BGSS tariff. Current plans call for Power to hedge on behalf of PSE&G approximately 70 billion cubic feet or 50% of its residential gas supply annual requirements. For additional information, see Note 18. Related-Party Transactions.

Minimum Fuel Purchase Requirements

Power has various long-term fuel purchase commitments for coal through 2017 to support its fossil generation stations and for supply of nuclear fuel for the Salem, Hope Creek and Peach Bottom nuclear generating stations and for firm transportation and storage capacity for natural gas.

Power's strategy is to maintain certain levels of uranium and to make periodic purchases to support such levels. As such, the commitments referred to in the following table may include estimated quantities to be purchased that deviate from contractual nominal quantities. Power's nuclear fuel commitments cover approximately 100% of its estimated uranium, enrichment and fabrication requirements through 2015 and a portion through 2017 at Salem, Hope Creek and Peach Bottom.

Power's various multi-year contracts for firm transportation and storage capacity for natural gas are primarily used to meet its gas supply obligations to PSE&G. These purchase obligations are consistent with Power's strategy to enter into contracts for its fuel supply in comparable volumes to its sales contracts.

As of June 30, 2013, the total minimum purchase requirements included in these commitments were as follows:

| Fuel Type | Power's Share of Commitments through 2017 Millions |
|--------------|---|
| Nuclear Fuel | |
| Uranium | \$470 |
| Enrichment | \$368 |
| Fabrication | \$137 |
| Natural Gas | \$953 |
| Coal | \$493 |
| | |

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Regulatory Proceedings

New Jersey Clean Energy Program

In June 2013, the BPU established the funding level for fiscal 2014 applicable to its Renewable Energy and Energy Efficiency programs. The fiscal year 2014 aggregate funding for all electric distribution companies (EDCs) is \$345 million with PSE&G's share of the funding at \$200 million. PSE&G has a current liability of \$204 million and a noncurrent liability of \$27 million as of June 30, 2013 for its outstanding share of the fiscal 2014 and remaining fiscal 2013 funding. The liability is reduced as normal payments are made. The liability has been recorded with an offsetting Regulatory Asset, since the costs associated with this program are recovered from PSE&G ratepayers through the Societal Benefits Charge (SBC).

Long-Term Capacity Agreement Pilot Program (LCAPP)

In 2011, New Jersey enacted the LCAPP Act that resulted in the selection of three generators to build a total of approximately 2,000 MW of new combined-cycle generating facilities located in New Jersey. Each of the New Jersey EDCs, including PSE&G, was directed to execute a standard offer capacity agreement (SOCA) with the three selected generators, but did so under protest preserving their legal rights. The SOCA provides for the EDCs to guarantee specified annual capacity payments to the generators subject to the terms and conditions of the agreement. Legal challenges to the BPU's implementation of the LCAPP Act were filed in New Jersey appellate court and this appeal is pending. In addition, the LCAPP Act itself has been challenged on constitutional grounds in federal court and that proceeding is ongoing. In July 2013, the SOCA contract with New Jersey Power Development LLC, a subsidiary of NRG Energy, Inc., was terminated early as a result of a default by the generator. The generator has accepted this early termination and this SOCA contract is no longer in effect. The other two SOCA contracts are currently in effect. SOCA contracts are for a 15-year term, which are scheduled to commence for one of the generators in the 2015/2016 delivery year and for the other generator in the 2016/2017 delivery year. These two contracts are for the aggregate notional amount of approximately 1,300 MWs of installed capacity. Based upon the expected percentage of state load that PSE&G will be serving during the term of these contracts, PSE&G would be responsible for the positive difference of the contract price and the annual RPM clearing price for approximately 52% or 676 MW of this amount provided that these generators satisfy their obligations under the SOCA, including the requirement that the specific generation units set forth in the contract achieve commercial operation.

The current estimated fair value of the SOCAs is recorded as a Derivative Asset or Liability with an offsetting Regulatory Asset or Liability on PSE&G's Consolidated Balance Sheets. See Note 12. Fair Value Measurements for additional information.

Superstorm Sandy

In late October 2012, Superstorm Sandy caused damage to PSE&G's transmission and distribution system throughout its service territory as well as to some of Power's generation infrastructure in the northern part of New Jersey. Strong winds and the resulting storm surge caused damage to switching stations, substations and generating infrastructure. Power incurred an additional \$22 million and \$50 million of storm-related expense for the three months and six months ended June 30, 2013, respectively, primarily for repairs at certain generating stations in Power's fossil fleet. Power had incurred \$85 million of costs in 2012. These costs were recognized in Operation and Maintenance Expense, offset by \$25 million and \$19 million of insurance recoveries in 2013 and 2012, respectively. Power's current estimate of the total costs required to restore its damaged facilities to their pre-Superstorm Sandy condition, including costs already incurred, is approximately \$364 million.

Leveraged Lease Investments

In January 2012, PSEG entered into a specific matter closing agreement with the IRS settling all matters related to cross border lease transactions. This agreement settled the leasing dispute with finality for all tax periods in which PSEG realized tax deductions from these transactions. In January 2012, PSEG also signed a Form 870-AD settlement agreement covering all audit issues for tax years 1997 through 2003. In March 2012, PSEG executed a Form 870-AD

settlement agreement covering all audit issues for tax years 2004 through 2006. These two agreements concluded ten years of audits for PSEG and the leasing issue for all tax years. For PSEG, the impact of these agreements was an increase in financial statement Income Tax Expense of approximately \$175 million in the first quarter of 2012. In prior periods, PSEG had established financial statement tax liabilities for uncertain tax positions in the amount of \$246 million with respect to these tax years. Accordingly, the settlement resulted in a net \$71 million decrease in the first quarter of 2012 in the Income Tax Expense of PSEG.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Cash Impact

For tax years 1997 through 2003, the tax and interest PSEG owes the IRS as a result of this settlement will be reduced by the \$320 million PSEG has on deposit with the IRS for this matter. PSEG paid a net deficiency for these years of approximately \$4 million during the second quarter of 2012. Based upon the closing agreement and the Form 870-AD for tax years 2004 through 2006, PSEG owes the IRS approximately \$620 million in tax and interest. Based on the settlement of the leasing dispute, for tax years 2007 through 2010, the IRS owes PSEG approximately \$676 million. PSEG has filed amended returns for tax years 2007-2010 reflecting the impact of the settlement. These returns have been audited by the IRS and accepted as filed. As required by statute, the IRS presented the refund claim to the Joint Committee on Taxation for approval. In October 2012, PSEG was notified that the Joint Committee took no exception to the refund claim. In April 2013, PSEG received confirmation from the IRS which shows that overpayments from the 2008 through 2010 tax years have been applied to satisfy the liabilities due with respect to tax years 2004 through 2007. Accordingly, no further cash payments will be required with respect to the contested leasing transactions. In addition to the above, PSEG will claim a tax deduction for the accrued deficiency interest associated with this settlement in 2012, which gives rise to a cash tax savings of approximately \$100 million.

Note 10. Changes in Capitalization

The following capital transactions occurred in the six months ended June 30, 2013:

Power

paid cash dividends of \$500 million to PSEG, and

paid \$300 million of 2.50% Senior Notes at maturity.

PSE&G

ssued \$500 million of 2.375% Secured Medium-Term Notes, Series I due May 2023,

paid \$150 million of 5.00% Secured Medium-Term Notes at maturity,

issued \$400 million of 3.80% Secured Medium-Term Notes, Series H due January 2043,

received \$100 million capital contribution from PSEG,

paid \$100 million of Transition Funding's securitization debt, and

paid \$6 million of Transition Funding II's securitization debt.

Note 11. Financial Risk Management Activities

The operations of PSEG, Power and PSE&G are exposed to market risks from changes in commodity prices, interest rates and equity prices that could affect their results of operations and financial condition. Exposure to these risks is managed through normal operating and financing activities and, when appropriate, through hedging transactions. Hedging transactions use derivative instruments to create a relationship in which changes to the value of the assets, liabilities or anticipated transactions exposed to market risks are expected to be offset by changes in the value of these derivative instruments.

Commodity Prices

The availability and price of energy commodities are subject to fluctuations due to weather, environmental policies, changes in supply and demand, state and federal regulatory policies, market conditions, transmission availability and other events. Power uses physical and financial transactions in the wholesale energy markets to mitigate the effects of adverse movements in fuel and electricity prices. Derivative contracts that do not qualify for hedge accounting or normal purchases/normal sales treatment are marked to market (MTM) with changes in fair value recorded in the income statement. The fair value for the majority of these contracts is obtained from quoted market sources. Modeling techniques using assumptions reflective of current market rates, yield curves and forward prices are used to interpolate certain prices when no quoted market exists.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Cash Flow Hedges

Power uses forward sale and purchase contracts, swaps and futures contracts to hedge forecasted energy sales from its generation stations and the related load obligations, and certain forecasted natural gas sales and purchases made to support the BGSS contract with PSE&G.

Certain of these derivative transactions are designated and effective as cash flow hedges. During the second quarter of 2012, Power de-designated certain of its commodity derivative transactions that had previously qualified as cash flow hedges as they were deemed to no longer be highly effective as required by the relevant accounting guidance. As a result, subsequent to June 1, 2012, Power recognizes all gains and losses from changes in the fair value of these derivatives immediately in earnings rather than deferring any such amounts in Accumulated Other Comprehensive Income (Loss). The fair values of Power's de-designated hedges were frozen in Accumulated Other Comprehensive Income (Loss) as the original forecasted transactions are still expected to occur and are reclassified into earnings as the original derivative transactions settle.

As of June 30, 2013 and December 31, 2012, the fair value and the impact on Accumulated Other Comprehensive Income (Loss) associated with accounting hedge activity were as follows:

| | As of | As of |
|---|----------|--------------|
| | June 30, | December 31, |
| | 2013 | 2012 |
| | Millions | |
| Fair Value of Cash Flow Hedges | \$1 | \$3 |
| Impact on Accumulated Other Comprehensive Income (Loss) (after tax) | \$4 | \$9 |

The expiration date of the longest-dated cash flow hedge at Power is in 2014. Power's after-tax unrealized gains on these derivatives that are expected to be reclassified to earnings during the next 12 months are \$4 million. There was no ineffectiveness associated with qualifying hedges as of June 30, 2013.

Trading Derivatives

The primary purpose of Power's wholesale marketing operation is to optimize the value of the output of the generating facilities via various products and services available in the markets it serves. Historically, Power engaged in trading of electricity and energy-related products where such transactions were not associated with the output or fuel purchase requirements of its facilities. This trading consisted mostly of energy supply contracts where Power secured sales commitments with the intent to supply the energy services from purchases in the market rather than from its owned generation. Such trading activities were marked to market through the income statement and represented less than one percent of gross margin (revenues less energy costs) on an annual basis. Effective July 2011, Power discontinued trading activities and anticipates that it will not enter into any more trading derivative contracts.

Other Derivatives

Power enters into additional contracts that are derivatives, but do not qualify for or are not designated as cash flow hedges. These transactions are intended to mitigate exposure to fluctuations in commodity prices and optimize the value of its expected generation. Trade types include financial options, futures, swaps, fuel purchases and forward purchases and sales of electricity. Changes in the fair market value of these contracts are recorded in earnings. PSE&G is a party to certain long-term natural gas sales contracts to optimize its pipeline capacity utilization. In addition, as further described in Note 9. Commitments and Contingent Liabilities, PSE&G was directed to execute long-term SOCAs with certain generators to support the LCAPP Act. These contracts qualify as derivatives and are marked to fair value with the offset recorded to Regulatory Assets and Liabilities.

Interest Rates

PSEG, Power and PSE&G are subject to the risk of fluctuating interest rates in the normal course of business. Exposure to this risk is managed by targeting a balanced debt maturity profile which limits refinancing in any given period or interest rate environment. In addition, they have used a mix of fixed and floating rate debt, interest rate swaps and interest rate lock agreements.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Fair Value Hedges

PSEG enters into fair value hedges to convert fixed-rate debt into variable-rate debt. As of June 30, 2013, PSEG had seven interest rate swaps outstanding totaling \$850 million. These swaps convert Power's \$300 million of 5.5% Senior Notes due December 2015, \$300 million of Power's \$303 million of 5.32% Senior Notes due September 2016 and Power's \$250 million of 2.75% Senior Notes due September 2016 into variable-rate debt. These interest rate swaps are designated and effective as fair value hedges. The fair value changes of the interest rate swaps are fully offset by the changes in the fair value of the underlying forecasted interest payments of the debt. As of June 30, 2013 and December 31, 2012, the fair value of all the underlying hedges was \$42 million and \$57 million, respectively. Cash Flow Hedges

PSEG uses interest rate swaps and other derivatives, which are designated and effective as cash flow hedges, to manage its exposure to the variability of cash flows, primarily related to variable-rate debt instruments. The Accumulated Other Comprehensive Income (Loss) (after tax) related to interest rate derivatives designated as cash flow hedges was \$(1) million and \$(2) million as of June 30, 2013 and December 31, 2012, respectively. Fair Values of Derivative Instruments

The following are the fair values of derivative instruments on the Condensed Consolidated Balance Sheets. The following tables also include disclosures for offsetting derivative assets and liabilities which are subject to a master netting or similar agreement. See Note 2. Recent Accounting Standards. In general, the terms of the agreements provide that in the event of an early termination the counterparties have the right to offset amounts owed or owing under that and any other agreement with the same counterparty. Accordingly, and in accordance with our accounting policy, these positions have been offset in the Condensed Consolidated Balance Sheets of Power, PSE&G and PSEG. The following tabular disclosure does not include the offsetting of trade receivables and payables.

| | As of June 3 | 30, 2013 | | | | | | | | | |
|-----------------------------|--------------|-----------|---|-------------------|--------|---|-------------|---|---------------|-------------|---|
| | Power (A) | | | | | | PSE&G(A) |) | PSEG (A) | Consolidate | d |
| | Cash Flow | Non | | | | | Non | | Fair Value | | |

Substantially all of Power's and PSEG's derivative instruments are contracts subject to master netting agreements.

Contracts not subject to master netting or similar agreements are immaterial and did not have any collateral posted or received as of June 30, 2013 and December 31, 2012. PSE&G does not have any derivative contracts subject to master netting or similar agreements.

Represents the netting of fair value balances with the same counterparty (where the right of offset exists) and the application of collateral. All cash collateral received or posted that has been allocated to derivative positions, where the right of offset exists, has been offset in the statement of financial position. As of June 30, 2013 and

(B)December 31, 2012, net cash collateral paid of \$1 million and \$2 million, respectively, were netted against the corresponding net derivative contract positions. Of the \$1 million as of June 30, 2013, cash collateral of \$1 million was netted against current liabilities. Of the \$2 million as of December 31, 2012, cash collateral of \$(3) million and \$5 million were netted against current assets and current liabilities, respectively.

Certain of Power's derivative instruments contain provisions that require Power to post collateral. This collateral may be posted in the form of cash or credit support with thresholds contingent upon Power's credit rating from each of the major credit rating agencies. The collateral and credit support requirements vary by contract and by counterparty. These credit risk-related contingent features stipulate that if Power were to be downgraded or lose its investment grade credit rating, it would be required to provide additional collateral. This incremental collateral requirement can offset collateral requirements related to other derivative instruments that are assets with the same counterparty, where the contractual right of offset exists under applicable master agreements. Power also enters into commodity transactions on the New York Mercantile Exchange (NYMEX) and Intercontinental Exchange (ICE). The NYMEX and ICE clearing houses act as counterparties to each trade. Transactions on NYMEX and ICE must adhere to comprehensive collateral and margin requirements.

The aggregate fair value of all derivative instruments with credit risk-related contingent features in a liability position that are not fully collateralized (excluding transactions on NYMEX and ICE that are fully collateralized) was \$82 million and \$98 million as of June 30, 2013 and December 31, 2012, respectively. As of June 30, 2013 and December 31, 2012, Power had the contractual right of offset of \$46 million and \$61 million, respectively, related to derivative instruments that are assets with the same counterparty under agreements and net of margin posted. If Power had been downgraded or lost its investment grade rating, it would have had additional collateral obligations of \$36 million and \$37 million as of June 30, 2013 and December 31, 2012, respectively, related to its derivatives, net of the contractual right of offset under master agreements and the application of collateral. This potential additional collateral is included in the \$679 million and \$654 million as of June 30, 2013 and December 31, 2012, respectively, discussed in Note 9. Commitments and Contingent Liabilities.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The following reconciles the Accumulated Other Comprehensive Income for derivative activity included in the Accumulated Other Comprehensive Loss of PSEG on a pre-tax and after-tax basis:

| Accumulated Other Comprehensive Income | Pre-Tax | After-Tax | |
|--|----------|-----------|---|
| | Millions | | |
| Balance as of December 31, 2012 | \$12 | \$7 | |
| Less: Gain Reclassified into Income | (6 |) (4 |) |
| Balance as of March 31, 2013 | \$6 | \$3 | |
| Less: Gain Reclassified into Income | (1 |) — | |
| Balance as of June 30, 2013 | \$5 | \$3 | |

The following shows the effect on the Condensed Consolidated Statements of Operations of derivative instruments not designated as hedging instruments or as normal purchases and sales for the three months and six months ended June 30, 2013 and 2012:

| Derivatives Not Designated as Hedges | Location of Pre-Tax Gain (Loss) Recognized in Income on Derivatives | Timee Intentions Ended | | | | | |
|--------------------------------------|---|------------------------|------|---------------------------|---|-------|---|
| | | | | Six Months Ended June 30, | | | |
| | | 2013 Millions | 2012 | 2013 | | 2012 | |
| PSEG and Power | | | | | | | |
| Energy-Related Contracts | Operating Revenues | \$163 | \$40 | \$(46 |) | \$235 | |
| Energy-Related Contracts | Energy Costs | (5) | 3 | 53 | | (23 |) |
| Total PSEG and Power | | \$158 | \$43 | \$7 | | \$212 | |

Power's derivative contracts reflected in the preceding tables include contracts to hedge the purchase and sale of electricity and natural gas and the purchase of fuel. Not all of these contracts qualify for hedge accounting. Most of these contracts are marked to market. The tables above do not include contracts for which Power has elected the normal purchase/normal sales exemption, such as its BGS contracts and certain other energy supply contracts that it has with other utilities and companies with retail load. In addition, PSEG has interest rate swaps designated as fair value hedges. The effect of these hedges was to reduce interest expense by \$5 million for each of the three month periods and \$10 million and \$11 million for the six month periods ended June 30, 2013 and 2012, respectively.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

| Interest Rate Swaps | U.S. Dollars | 850 | 850 | | _ |
| Coal | Tons | 1 | _ | 1 | |

Credit Risk

Credit risk relates to the risk of loss that we would incur as a result of non-performance by counterparties pursuant to the terms of their contractual obligations. We have established credit policies that we believe significantly minimize credit risk. These policies include an evaluation of potential counterparties' financial condition (including credit rating), collateral requirements under certain circumstances and the use of standardized agreements, which allow for the netting of positive and negative exposures associated with a single counterparty. In the event of non-performance or non-payment by a major counterparty, there may be a material adverse impact on Power's and PSEG's financial condition, results of operations or net cash flows.

As of June 30, 2013, 95% of the credit exposure for Power's operations was with investment grade counterparties. Credit exposure is defined as any positive results of netting accounts receivable/accounts payable and the forward value of open positions (which includes all financial instruments including derivatives and non-derivatives and normal purchases/normal sales).

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

The following table provides information on Power's credit risk from others, net of cash collateral, as of June 30, 2013. It further delineates that exposure by the credit rating of the counterparties and provides guidance on the concentration of credit risk to individual counterparties and an indication of the quality of Power's credit risk by credit rating of the counterparties.

| Rating | Current Exposure Millions | Securities held as Collateral | Net Exposure | Number of Counterparties >10% | Net Exposure of Counterparties >10% Millions | |
|--------------------------------------|---------------------------------|-------------------------------------|-----------------|-------------------------------------|---|-----|
| | | Φ26 | Φ225 | 4 | | () |
| Investment Grade—External Ratio | ng 225 | \$36 | \$225 | I | \$114 | (A) |
| Non-Investment Grade—External Rating | 1 | _ | 1 | _ | _ | |
| Investment Grade—No External Rating | 8 | _ | 8 | _ | _ | |
| Non-Investment Grade—No Externating | rnal I I | _ | 11 | _ | _ | |
| Total | \$245 | \$36 | \$245 | 1 | \$114 | |

(A) Represents net exposure with PSE&G.

The net exposure listed above, in some cases, will not be the difference between the current exposure and the collateral held. A counterparty may have posted more cash collateral than the outstanding exposure, in which case there would be no exposure. When letters of credit have been posted as collateral, the exposure amount is not reduced, but the exposure amount is transferred to the rating of the issuing bank. As of June 30, 2013, Power had 176 active counterparties.

Note 12. Fair Value Measurements

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Accounting guidance for fair value measurement emphasizes that fair value is a market-based measurement, not an entity-specific measurement, and establishes a fair value hierarchy that distinguishes between assumptions based on market data obtained from independent sources and those based on an entity's own assumptions. The hierarchy prioritizes the inputs to fair value measurement into three levels: Level 1—measurements utilize quoted prices (unadjusted) in active markets for identical assets or liabilities that PSEG, Power and PSE&G have the ability to access. These consist primarily of listed equity securities.

Level 2—measurements include quoted prices for similar assets and liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active and other observable inputs such as interest rates and yield curves that are observable at commonly quoted intervals. These consist primarily of non-exchange traded derivatives such as forward contracts or options and most fixed income securities.

Level 3—measurements use unobservable inputs for assets or liabilities, based on the best information available and might include an entity's own data and assumptions. In some valuations, the inputs used may fall into different levels of the hierarchy. In these cases, the financial instrument's level within the fair value hierarchy is based on the lowest level of input that is significant to the fair value measurement. As of June 30, 2013, these consist primarily of electric swaps whose basis is deemed significant to the fair value measurement, long-term electric load contracts, long-term gas supply and capacity contracts.

The following tables present information about PSEG's, Power's and PSE&G's respective assets and (liabilities) measured at fair value on a recurring basis as of June 30, 2013 and December 31, 2012, including the fair value measurements and the levels of inputs used in determining those fair values. Amounts shown for PSEG include the

amounts shown for Power and PSE&G.

| Energy Related Contracts (A) | \$(107 |) \$— | \$ — | \$ — | \$(107 |) |

Level 2—Fair values for energy-related contracts are obtained primarily using a market-based approach. Most derivative contracts (forward purchase or sale contracts and swaps) are valued using the average of the bid/ask midpoints from multiple broker or dealer quotes or auction prices. Prices used in the valuation process are also corroborated independently by management to determine that values are based on actual transaction data or, in the absence of transactions, bid and offers for the day. Examples may include certain exchange and non-exchange traded capacity and electricity contracts and natural gas physical or swap contracts based on market prices, basis adjustments and other premiums where adjustments and premiums are not considered significant to the overall inputs.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Level 3—For energy-related contracts, which include more complex agreements where limited observable inputs or pricing information are available, modeling techniques are employed using assumptions reflective of contractual terms, current market rates, forward price curves, discount rates and risk factors, as applicable. Fair values of other energy contracts may be based on broker quotes that we cannot corroborate with actual market transaction data.

Interest rate swaps are valued using quoted prices on commonly quoted intervals, which are interpolated for (B) periods different than the quoted intervals, as inputs to a market valuation model. Market inputs can generally be verified and model selection does not involve significant management judgment.

The NDT Fund maintains investments in various equity and fixed income securities classified as "available for sale."

(C) The Rabbi Trust maintains investments in an S&P 500 index fund and various fixed income securities classified as "available for sale." These securities are generally valued with prices that are either exchange provided (equity securities) or market transactions for comparable securities and/or broker quotes (fixed income securities).

Level 1—Investments in marketable equity securities within the NDT Fund are primarily investments in common stocks across a broad range of industries and sectors. Most equity securities are priced utilizing the principal market close price or, in some cases, midpoint, bid or ask price (primarily Level 1). The Rabbi Trust equity index fund is valued based on quoted prices in an active market (Level 1).

Level 2—NDT and Rabbi Trust fixed income securities are limited to investment grade corporate bonds and United States Treasury obligations or Federal Agency asset-backed securities with a wide range of maturities. Since many fixed income securities do not trade on a daily basis, they are priced using an evaluated pricing methodology that varies by asset class and reflects observable market information such as the most recent exchange price or quoted bid for similar securities. Market-based standard inputs typically include benchmark yields, reported trades, broker/dealer quotes and issuer spreads (primarily Level 2). Short-term investments and certain commingled temporary investments are valued using observable market prices or market parameters such as time-to-maturity, coupon rate, quality rating and current yield (primarily Level 2).

(D) Cash collateral netting represents collateral amounts netted against derivative assets and liabilities as permitted under the accounting guidance for Offsetting of Amounts Related to Certain Contracts.

Additional Information Regarding Level 3 Measurements

For valuations that include both observable and unobservable inputs, if the unobservable input is determined to be significant to the overall inputs, the entire valuation is categorized in Level 3. This includes derivatives valued using indicative price quotations for contracts with tenors that extend into periods with no observable pricing. In instances where observable data is unavailable, consideration is given to the assumptions that market participants would use in valuing the asset or liability. This includes assumptions about market risks such as liquidity, volatility and contract duration. Such instruments are categorized in Level 3 because the model inputs generally are not observable. PSEG's Risk Management Committee approves risk management policies and objectives for risk assessment, control and valuation, counterparty credit approval, and the monitoring and reporting of risk exposures. The Risk Management Committee reports to the Audit Committee of the PSEG Board of Directors on the scope of the risk management activities and is responsible for approving all valuation procedures at PSEG. Forward price curves for the power market utilized by Power to manage the portfolio are maintained and reviewed by PSEG's Enterprise Risk Management market pricing group, and used for financial reporting purposes. PSEG considers credit and nonperformance risk in the valuation of derivative contracts categorized in Levels 2 and 3, including both historical and current market data, in its assessment of credit and nonperformance risk by counterparty. The impacts of credit and nonperformance risk were not material to the financial statements.

The following tables provide details surrounding significant Level 3 valuations as of June 30, 2013 and December 31, 2012. For Power, in general, electric swaps are valued based on at least two pricing inputs, basis and underlying. To the extent the basis component is based on a single broker quote and is significant to the fair value of the electric swap, it is categorized as Level 3. Power's electric load contracts in which load consumption may change hourly are fair valued using certain unobservable inputs, such as historic load variability. For Power, long-term electric capacity

contracts are measured using capacity auction prices. If the fair value for the unobservable tenor is significant, then the entire capacity contract is categorized as Level 3. For Power and PSE&G, long-term gas supply contracts are measured at fair value using both actively traded pricing points as well as unobservable inputs such as gas prices beyond observable periods and long-term basis quotes and, accordingly, the fair value measurements are classified in Level 3. For PSE&G, long-term electric capacity contracts are measured at fair value using both observable capacity prices and unobservable inputs consisting of forecasts of future long-term electric capacity prices and include adjustments for contingencies, such as litigation risk and plant construction risk. Accordingly, the fair value measurements are classified as Level 3.

| TOTAL PSEG | | \$103 | \$(| |) | | |
| Commodity | Quantitative Information Level 3 Position | | Fair V as of Decen 31, 20 | value nber 1 12 Liabiliti | Valuation Fechnique(s) | ements Significant Unobservable Input | Range |
| Power | | | IVIIIIO | ons | | | |
| HIECTRIC | rity Flactric Swaps | | | I | Discounted | Power Rasis | \$0 to |
| Electric | • | | \$7 \$ | $S(1) \frac{I}{G}$ | eash flow | Power Basis Historic Load | \$10/MWh |
| | eity Electric Swaps | | \$7 \$ | $S(1) \begin{bmatrix} 1 \\ 0 \end{bmatrix}$ | | Power Basis Historic Load Variability | |
| | • | | \$7 \$ 1 (2 5 (| $5(1) \frac{1}{6}$ $2) \frac{1}{6}$ | cash flow Discounted | Historic Load | \$10/MWh |
| Electric Other Total Power | city Electric Load Contracts Various (A) Forward Co | | \$7 \$ 1 (15 5 (15 \$13 \$ | $ \begin{array}{cccccccccccccccccccccccccccccccccccc$ | cash flow Discounted | Historic Load | \$10/MWh -5% to +10% |

- (A) Includes long-term gas supply positions which are immaterial as of June 30, 2013 and December 31, 2012. Also includes long-term electric capacity positions which are immaterial as of December 31, 2012. Includes long-term gas supply and long-term electric capacity positions with various unobservable inputs.
- (B) Significant unobservable inputs for the gas supply contracts include long-term basis prices in the range of \$0 to \$4/MMBTU of

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

natural gas. Unobservable inputs for the long-term electric capacity contracts include forecasted capacity prices in the range of \$100 to \$400/MW day.

Significant unobservable inputs listed above would have a direct impact on the fair values of the above Level 3 instruments if they were adjusted. For energy-related contracts in cases where Power and PSE&G are sellers, an increase in either the power basis or the load variability or the longer-term gas basis amounts would decrease the fair value. For long-term electric capacity contracts where PSE&G is a buyer, an increase in the capacity price would increase the fair value.

A reconciliation of the beginning and ending balances of Level 3 derivative contracts and securities for the three months and six months ended June 30, 2013 and 2012, respectively, follows:

PSEG's and Power's gains and losses attributable to changes in net derivative assets and liabilities include \$17 million and \$7 million in Operating Income in 2013 and 2012, respectively. Of the \$17 million in Operating

- (A) Income in 2013, \$16 million is unrealized. Of the \$7 million in Operating Income in 2012, \$(7) million is unrealized. Energy Holdings' release from its obligation under the non-recourse debt is included in PSEG's Operating Income for 2012 and is offset by the write-off of the related assets.
- Mainly includes gains/losses on PSE&G's derivative contracts that are not included in either earnings or OCI, as (B) they are deferred as a Regulatory Asset/Liability and are expected to be recovered from/returned to PSE&G's
- (B)they are deferred as a Regulatory Asset/Liability and are expected to be recovered from/returned to PSE&G's customers.
- (C) Represents \$(14) million in settlements for the three months ended June 30, 2012. Includes \$10 million and \$(43) million in settlements for the six months ended June 30, 2013 and 2012, respectively.
 - During the three months ended June 30, 2013 and six months ended June 30, 2013, \$6 million and \$4 million, respectively, of net derivatives assets/liabilities were transferred from Level 3 to Level 2 due to more observable
- (D) pricing for the underlying securities. The transfer was recognized as of the beginning of the first quarter (i.e. the quarter in which the transfer occurred), as per PSEG's policy. There were no transfers among levels during the three months ended June 30, 2012 and the six months ended June 30, 2012.
 - PSEG's and Power's gains and losses attributable to changes in net derivative assets and liabilities include \$(17) million and \$41 million in Operating Income in 2013 and 2012, respectively. Of the \$(17) million in Operating
- (E)Income in 2013, \$(8) million is unrealized. Of the \$41 million in Operating Income in 2012, \$(2) million is unrealized. Energy Holdings' release from its obligation under the non-recourse debt is included in PSEG's Operating Income for 2012 and is offset by the write-off of the related assets.

As of June 30, 2013, PSEG carried \$1.9 billion of net assets that are measured at fair value on a recurring basis, of which \$35 million of net liabilities were measured using unobservable inputs and classified as Level 3 within the fair value hierarchy.

As of June 30, 2012, PSEG carried \$1.7 billion of net assets that are measured at fair value on a recurring basis, of which \$36 million of net liabilities were measured using unobservable inputs and classified as Level 3 within the fair value hierarchy.

NOTES TO CONDENSED CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

Fair Value of Debt

The estimated fair values were determined using the market quotations or values of instruments with similar terms, credit ratings, remaining maturities and redemptions as of June 30, 2013 and December 31, 2012.

| | June 30, 2013 | | December 31 | , 2012 |
|--------------------------------------|---------------|---------|-------------|---------|
| | Carrying | Fair | Carrying | Fair |
| | Amount | Value | Amount | Value |
| | Millions | | | |
| Long-Term Debt: | | | | |
| PSEG (Parent) (A) | \$27 | \$42 | \$38 | \$57 |
| Power -Recourse Debt (B) | 2,041 | 2,361 | 2,340 | 2,818 |
| PSE&G (B) | 5,540 | 5,627 | 4,795 | 5,606 |
| Transition Funding (PSE&G) (B) | 590 | 643 | 690 | 765 |
| Transition Funding II (PSE&G) (B) | 27 | 28 | 32 | 34 |
| Energy Holdings: | | | | |
| Project Level, Non-Recourse Debt (C) | 25 | 25 | 44 | 44 |
| Total Long-Term Debt | \$8,250 | \$8,726 | \$7,939 | \$9,324 |

Fair value represents net offsets to debt resulting from adjustments from interest rate swaps entered into to hedge (A) certain debt at Power. Carrying amount represents such fair value reduced by the unamortized premium resulting from a debt exchange entered into between Power and Energy Holdings.

The debt fair valuation is based on the present value of each bond's future cash flows. The discount rates used in the present value analysis are based on an estimate of new issue bond yields across the treasury curve. When a bond has embedded options, an interest rate model is used to reflect the impact of interest rate volatility into the

analysis (primarily Level 2 measurements).

⁽C)Non-recourse project debt is valued as equivalent to the amortized cost and is classified as a Level 3 measurement.
